Cumulative Subject Index

1960 - 1964 : Part I

(VOLUMES 63-67).

Published by THE INSTITUTION OF ELECTRICAL ENGINEERS
Savoy Place, London, W.C. 2
In association with The Institute of Physics and The Physical Society
and The American Institute of Physics

FOREWORD

In order to publish the Cumulative Subject Index covering the years 1960-1964 as soon as possible after the completion of this period, it was decided to present a simple amalgamation of the published annual indexes. However, where a new subject heading was introduced during the 5-year period this has been noted and the attention of the reader drawn to the appended "see also" headings under which the relevant earlier literature will be found.

As in the annual subject indexes, the entries under each subject heading are arranged in alphabetical order of the first word, irrespective of the year of the entry.

The numbers after the entires are the serial numbers of the abstracts, and the respective years are indicated by the initial number, giving the last digit of the year; this "3=1234" means "Abstract 1234 of 1963":, "0=3456" means "Abstract 3456 of 1960".

D. S. Hopper
Director, Science Abstracts.

May 1967

This index is published in two parts:

Part I Letters A-M

Part II Letters N-Z

SUBJECT INDEX

INTRODUCTION

The entries in this index refer to the abstracts by their serial number, not by the page number. The entries are grouped under headings (printed in bold type, e.g. "**Abrasion**") which represent, in the main, general categories or concepts rather than specific names. If a heading for a particular subject does not appear, a more general heading should be consulted; for example, "Zone plates" would be listed under "**Diffraction**"; "Barkhausen discontinuities" under "**Magnetization process**". There are numerous cross-references directing attention to related headings in other parts of the index.

Many of the headings are subdivided by the use of subheadings, which are indented (i.e. printed slightly to the right) and commence with a small latter (for example, see the subheadings under "**Absorption**").

ARRANGEMENT OF HEADINGS AND SUBHEADINGS

The headings are arranged throughout the index in alphabetical order according to British Standard 1749:1951 (the "word by word" system, not "reading right through"). The subheadings, with a few exceptions, are themselves arranged in alphabetical order under their respective headings. The exceptions (for example, see the subheadings under "**Spectra**", "**Crystal structure, atomic**") are cases where a more logical order is preferable to a purely alphabetical one.

ARRANGEMENTS OF ENTRIES UNDER HEADINGS

Entries are arranged in two alphabetical groups as follows. First group: generalities and named substances (in words); second group: named substances (chemical formulae). If a search is being made for a particular substance, both the first and second alphabetical groups should be inspected since, for example, alumina may also be listed as Al_2O_3.

COLLECTED LIST OF SUBJECT HEADINGS

The alphabetical arrangement of the headings is the most convenient for locating a known heading quickly, but there may be other related headings elsewhere in the index of which the reader is unaware, and which he would only come across by accident. To assist the reader to discover all the headings appropriate to his subject, a collected list of the headings is given at the end of the index, which should be consulted as a matter of routine each time a search is made. In this list, the headings are not arranged in alphabetical order, but are grouped into sections by subject on the same basis as the arrangement of the abstracts in the monthly issues of Physics Abstracts. By using this list, the reader can quickly determine which are the headings appropriate to his subject, and they are then easily found in the main index in their alphabetical position.

HEADINGS WITH NO ENTRIES

Because physics is a developing subject, it is not possible to maintain the list of headings unchanged from year to year; it is subject to a continuous process of revision, with the introduction of new headings and subheadings, and the alteration and elimination of old ones. This process is a gradual one, however, and the great majority of the headings used in any given year are the same as those of the previous year. To assist in maintaining the continuity of the index, all the headings and subheadings in use in any of the years 1960-64 are printed, with, where appropriate, notes on the years of their introduction or removal. Those headings and subheadings, for which there are no abstracts recorded in the present volume, are followed by the announcement "No entries", this supplies confirmation that these headings had not been dropped from the index, and entries might reappear under them in a later year.

ELEMENTS, COMPOUNDS AND OTHER SUBSTANCES

The names of elements, their compounds, a few compounds of special interest (e.g. "**Water**") and a few common materials (e.g. "**Wood**", "**Paper**") are included as headings. Under these, as well as under the appropriate "subject" headings, are listed any abstracts which contain significant physical information about the element, compound or substance named; except, however, that abstracts listed under headings referring to nuclear properties, including radioactivity, are not necessarily also listed under the substance name. The entries under these headings are themselves arranged in alphabetical order of substance or nuclide names, so that a given substance can be readily located.

Inorganic compounds of the elements are listed under the first element in the chemical formula, and all the compounds of a given element are grouped under a single heading (e.g. "**Sodium compounds**"). Alloys are listed under the first constituent, e.g. Cu-Ni alloys under "**Copper compounds**". Organic compounds are grouped under "**Organic compounds**", "**Polymers**", "**Plastics**" and under special substance headings such as "**Paper**", "**Proteins**", etc.; all the latter are listed in the collected list of headings at the end of the index.

BEFORE USING INDEX, CONSULT LIST OF SUBJECT HEADINGS PRINTED ON THE FOLLOWING PAGES

LIST OF SUBJECT INDEX HEADINGS

The headings used in the Alphabetical Subject Index are listed below. The headings are grouped into sections on the same basis as the arrangement of the abstracts in the monthly issues of Physics Abstracts. Each section lists the headings which concern its subject and it follows that many of the headings are listed in several places.

An introduction to the Subject Index will be found on the previous page.

- Stereoscopy

TECHNIQUE . MATERIALS

- Biological technique and instruments
- Chemical technology
- Laboratory apparatus and technique
- Leak detection
- Low-temperature technique
- Materials
- Metallurgy
- Vacuum technique
- Zone melting and refining

All the chemical elements are listed by name, followed by their compounds and alloys. Organic compounds are grouped under the headings "Organic compounds", "Polymers", "Plastics". In addition, there are also the following headings:

- Actinides
- Actinide compounds
- Alkali metals
- Alkali metal compounds
- Alkaline earth metals
- Alkaline earth compounds
- Alloys
- Ceramics
- Ferrites
- Ferroelectric materials
- Fibres
- Garnets
- Halogens
- Inert gases
- Metals
- Minerals
- Optical materials
- Porous materials
- Powders
- Proteins
- Rare earth metals
- Rare earth compounds
- Semiconductors
- Semiconducting materials
- Transition metals
- Transition metal compounds
- Waxes

as well as the following special substance headings:

- Air
- Blood
- Bone
- Clay
- Coal
- Concrete
- Deuterium
- Diamonds
- Gelatin
- Glass
- Graphite
- Ice
- Mica
- Ozone
- Paper
- Quartz
- Rochelle salt
- Rubber
- Sand
- Seawater
- Soil
- Steam
- Steel
- Tritium
- Water
- Wood

Aberrations, optical
- See also Electron lenses; Ion optics; Optical instrument testing; Optics, geometrical; Particle optics
- aberrant images, improvement by filtering 1=5338
- achromatism of 2 coaxial thin lenses, new theoretical treatment 4=8373
- achromatization of dielec. mirrors using computer 2=17640
- analysis, use of quasi-invariants 3=1801
- anamorphic and other systems, diffr. theory treatment 1=18575
- anamorphic systems, third-order aberrations 1=18576
- angular, design criterion for best definition without parallax 0=8770
- aplanatic points of spherical refracting surface, new theoretical treatment 4=8373
- aplanatism, equivalence of definitions 2=1252
- aplanats, cemented doublets 1=4441
- astigmatic optical systems, response 0=16819
- astigmatism and coma in spectacle lenses 3=11886
- astigmatism, spher. aberr., anc coma rel. to best image position 2=7320
- astrograph objective, coma, rel. to star positions on photo. plate 2=24070
- astrograph objective, coma, rel. to star positions on photo. plate 3=3524
- automatic correction, using digital computer 2=7333
- Buchdahl's coeffs., normalized, of 5th order 3=238
- Chebychev polynomial description 4=29733
- choice of rays for tracing through a system 0=5146
- chromatic, correction using dispersion formula 0=19381
- chromatic, four-colour achromats and superchromats 0=16817
- chromatic, transverse, in cemented doublets 2=19681
- chromatic, use of supplementary lenses, calc. 2=7323
- coefficients of higher orders, rel. to design 3=16734
- coefficients, use in optical design 0=5145
- coefficients, reversible systems, theory 1=8215
- coma, brightness and diaphragm, in rotationally-symmetric systems 0=19374
- coma, correction 2=5145
- coma, diffraction effects 4=27290
- coma, effect on response function of optical system 0=10749
- coma, freedom, isoplanatism condition 2=91
- coma, geom.-optical calc. of frequency response 0=6909
- coma, in Seidel eikonal, isoplanatic condition 0=3605
- coma, teaching demonstration expt. 2=90
- concave grating 0=14843
- concentric corrector, errors, detailed analysis 3=1795-6
- concentric system of refl. surfaces, spherical aberr. 4=8394
- concentric systems, algebraic theory to all orders 3=1794
- concentric systems, spherical aberr. 3=14313
- in concentric systems of two glasses 1=16059
- contrast transmission function 0=19373
- contrast transmission function, fall-off 3=7308
- convergent thick lens, longitudinal chromatic aberration 0=3608
- correction, differential balancing method 4=11329
- correction, phase absorption or double diffr. filters 4=18380
- crossed cylinders, spherical, diffraction patterns 3=3868
- decentration and centring state defin. 3=16740
- by decentrations and tilts 4=8382
- decentring, definition and meas. methods, review 2=7326
- decentring tolerances, computation 3=1791
- deformed surfaces and field curvature 2=5144
- diffraction grating, concave at grazing incidence 4=11361
- distortion, inverse nodal slide evaluation 0=3610
- distortion, visual goniometric evaluation 0=3611
- distortions of photogrammetric objectives 1=4488-9
- doublet, cemented, principal point, object side 3=18962
- effect of aberration curve variations on optical transfer function 4=8387
- effect in diffraction by rect. aperture 4=8452
- effect on optical image, freq. response treatment 0=10750
- eye, periaxial 1=6668
- eyepiece, Ramsden, colour correct., calc. 3=18964
- eyepieces, double-doublet type 2=17586
- 1st and 3rd order, automatic corrections 0=8773
- geometrical optics 3=257
- graphical representation, usefulness in obs. 1=18562

Aberrations, optical—contd
- grating image, primary distortions 2=7328

- spectrographs, mirror, astigmatism calc. 2=22023
- spectrophotometer, grating, Wood diffraction anomalies 2=17623
- spherical aberr. and coma, corr. by aplanatic lenses 0=5139
- spherical, coma, specified, design for single lenses 3=9578
- spherical, correction by concentric meniscus lens 4=301
- spherical, det., appl. of diffraction effect in interferometry 1=18572
- spherical diffraction gratings 0=1042
- spherical illumination in diffraction image 1=4437

Aberrations, optical—contd
- spherical, optimum balanced fifth-order 4=8381
- spherical, order eleven 0=10751
- spherical, rel. to refractive index 3=1792
- spherical, Seidel coeffts. rel. to refr. index changes 2=7335
- spherical single lenses; de-centring 1=18568
- spherical, thick lens in air 0=19375
- superachromatic lenses, design 3=14309
- surfaces of revolution free from sine aberration 3=21519
- symmetrical systems, brightness coma and diaphragm coma 3=7307
- synthesizer 0=1029
- system between two media 0=14800
- telephoto lens, two-component, Siedel theory 1=18573
- telescopes, anamorphotic, four-lens 3=7309
- telescopes, geodetic, achromatism 3=14328
- thick lenses 0=14799
- thin lenses, theory 1=16057
- tolerance assignment, rel. to low contrast resolving power 4=8393
- tolerance, frequency response techniques appl. 2=11486
- tolerance solid, for low spatial frequencies 0=19401
- transverse chromatic, thick lens 0=8772
- transverse chromatic, various optical systems 0=8771
- triplet, third- and fifth-order analysis 2=7329
- in wavefront computations 1=228
- wave front deformation and retardation 0=8775
- wavefront, rel. to image contrase transfer function 2=7331
- wave and ray, exact relation 4=21278
- wide-aperture spherical mirrors, correction systems 0=16818

Abrasion
- See also Hardness.
- α-brass, periodic scratches 2=4350
- brittle single crystals, friction and wear 3=11188
- diamond by diamond 0=8141
- diamond on glass 0=8140
- diamond, hardness, effect of neutron irrad. 3=3248
- diamond, mechanism 3=25645
- diamond, resistance 0=16244
- electron beams for welding, cutting and surfacing 2=17888
- friction coeff., wear and work hardening, different behaviour of hexagonal and cubic metals 4=13387
- glass, effect on specific surface area 4=28984
- graphite, by emery paper 1=1352
- grinder for sectioning solid diffusion specimens 0=3388
- grinding, effect on coercive force of ferromagnetics 2=10664
- gypsum, abrasive wear, effect of surface dimensions 1=4003
- hard solids at high sliding speeds 2=21454
- logistic growth function for comminution 3=8786
- metallic wear, influence of speed 1=14928
- metal cutting, shear zone theory 2=14911
- metals and alloys, relation between resistance and elastic moduli 0=13917
- metals, effect on specific surface area 4=28984
- metals, effect of various agents 2=12871
- metals, f.c.c., surface reorientation 2=21453
- metals, plastic deformation theory 0=3164
- metals, wear, groove volume proportion removed 2=8758
- non-metals, plastically deformable 2=800
- polishing technique for optical flat 1=10229
- quartz, fine grinding, kinetics 0=21151
- sapphire, anisotropic wear resistance and plastic flow 1=14927
- scratches, decay to flatness 2=15089
- single contacts and multiple encounters 1=11522
- steel, abrasive wear, effect of surface dimensions 1=4003
- steel, case-hardened layer, resistance to 3=1247
- steel, effect on specific surface area 4=28984
- steel, stainless, periodic scratches 2=4350
- steel, X-ray diffr. study 1=15187
- thin films on Pt surfaces 2=4489
- wear phenomena, influence of surface energy 1=11524
- wear of polymers 1=4002
- wear of polymers 1=10223
- wear-resistance, similarity effects 2=19020, 23797
- Ag, friction coefficient and mass loss 1=1353
- AgBr, on emery paper 2=800
- AgCl, on emery paper 2=800
- Al, friction coefficient and mass loss 1=1353

Abrasion—contd
- Be, twinning of single crystals by, electron diffr. study 0=8156
- Be and Al 0=704
- Bi, wear and friction, effect of brittle fracture 3=13386
- Co—CW alloy, surface fracture mechanism 3=5075
- Cr films, resistance meas. 4=23112
- CsCl, unidirectional, rel. to re-orientation 2=19034
- Cu, abrasive wear, effect of surface dimensions 1=4003
- Cu, by carbon brushes 3=20761
- Cu, friction coefficient and mass loss 1=1353
- Fe, friction coefficient and mass loss 1=1353
- Ge, etching process for damage study 2=16973
- Ge{111} surface 2=8759
- In on In sliding, metal transfer and wedge-forming mechanism 3=13385
- KBr, unidirectional, rel. to re-orientation 2=19033
- KCl, unidirectional, rel. to re-orientation 2=19033
- LiF, increased X-ray reflection 0=8183
- LiF, scratching of crystal surface 0=10278
- LiF, unidirectional, rel. to re-orientation 2=19033
- MgF$_2$ films, resistance meas. 4=23112
- MgO, unidirectional, rel. to re-orientation 2=19033
- Mo, friction coefficient and mass loss 1=1353
- NH$_4$Br, unidirectional, rel. to re-orientation 2=19034
- NH$_4$Cl, unidirectional, rel. to re-orientation 2=19034
- NaCl, abrasive wear, effect of surface dimensions 1=4003
- NaCl, by corundum powder, electron microscopy 2=4352
- NaCl, dislocation processes at surface 3=8785
- NaCl, unidirectional, rel. to re-orientation 2=19033
- NaF, unidirectional, rel. to re-orientation 2=19033
- Nb, crystal struct. after filing 4=23194
- Ni, plastically deformed, abrasive wear 4=7438
- NiO, unidirectional, rel. to re-orientation 2=19033
- Pb, by water and wet sand 2=12873
- Pb, Sn, Zn, by emery paper, rate 2=23795
- Pt, friction coefficient and mass loss 1=1353
- Sb, wear and friction, effect of brittle fracture 3=13386
- Si, electron microscope study of damaged layer 3=3353
- Si, surface damage 3=16010
- Si, surface damage 3=18219
- SiO films, resistance meas. 4=23112
- TlCl, unidirectional, rel. to re-orientation 2=19034
- U, friction coefficient and mass loss 1=1353
- W carbide, Co-bonded, wear of hard and soft phases 0=18285
- W, friction coefficient and mass loss 1=1353
- Zn phosphors pulverization 0=10084

Absorption
- See also Alpha-rays, absorption; Beta-rays, absorption; Cosmic rays, absorption; electrons, absorption; Gamma rays, absorption; Hyperons, absorption; Mesons, absorption; Neutrons and antineutrons, absorption; Protons and antiprotons, absorption; Sorption; X-ray absorption.

- liquids, in porous solids, theory and exper. 0=8336-7
- moisture by dielecs., effect on elec. props. 4=28606
- selective, meas. using i.r. spectrometer 3=9598
- use in separation of HT and ortho-D$_2$ 1=12267
- theoretical analysis to give temp. of black-body X-ray source 1=18969
- two-stage radiant-energy 1=16151
- water, by nuclear emulsions 0=17168
- Ar and Na, by glasses 0=4683
- Ce vapour in Ni 4=30576
- CO, onto Pt (100), (110) faces, structure exam. 3=6899

Absorption—contd
    Fe, of F, and work function reduction 4=19075
    H, by Ag–Pd alloys 0=12117
    H_2, by Ni-enriched Zircaloy-2 0=8332
    H–Pt–Pd and D–Pt–Pd systems 4=26720
    N_2, by W, effect on surface potential 3=12225-6
    Na vapour, measurements 4=238
    NiH, desorption enthalpy of H 4=23649
  acoustic waves
      See also Noise abatement; Transmission, acoustic waves.
    absorbant materials (book) 1=12957
    absorbers, wide-band, with high absorption capability 4=5348
    absorption coeff. in reverberation chamber, accuracy 1=16042
    acoustic hoods for noise, design 2=19664
    acoustic materials, rel. to mounting conditions 2=17561
    acoustic streaming theory. 3=214
    in aerosols, effect of transport processes 0=14740
    air, anomalous, humidity effect mechanism 4=8253
    in air, audio-frequency, rel. to humidity 3=7241
    air, rel. to architectural acoustics 3=14302
    air, relaxation mechanisms 3=18860
    air, var. humidity 4=14215
    alkali iodides, nuclear quadrupole coupling 1=19702
    antiferromagnetic uniaxial, spin wave transitions 4=6733
    antiferromagnetics 0=10163
    apertures, circular and slit, meas. 4=14285
    architectural acoustics, average coeff., graph determ. 4=14319
    architectural methods 0=5121
    atmosphere, 200-2000 c/s atten. 3=16232
    attenuation coeff. for non-periodic sound pulse 1=2821
    attenuation data correl., cylindrical passages 2=17560
    attenuation in ducts, relaxation technique 2=83
    attenuation in gas-filled tubes, effect on resonance 1=1787
    attenuation in quartz and phonon viscosity 0=6043
    attenuation in solids, models 0=16758
    audience, 80 c/s to 10 kc/s 4=14320
    across audience seating 4=21259
    audience and seats in large halls 0=10743
    in auditoria, regulation 0=1015
    baffle, nonrigid, coupling of elements 4=29705
    benzene, solid and liquid, molecular relax. 4=16109
    binary alloys, effect of addition of third element 3=23489
    cavities, with velocity and thermal boundary layers 3=11864
    chemical medium, thermodynamics 4=8339
    chlorobutyl polymer, loss, var. cross-link density 4=13396
    churches, attenuation, review 4=11317
    circular and slit-shaped apertures in walls, sound insulation 4=11316
    coefficient of absorbent material, dependence on area 3=11865
    coeff., meas. 0=14745
    coeff., meas. in reverberation rooms 0=1022
    coeffs., area correction curves 0=10742
    coefficients, determination 1=1791
    coeffs., meas. in impedance tubes and scattered flds. 2=5113
    in concentrated suspensions 0=6869
    concert hall, audience, expt. and theory 2=1241
    converging wave fronts in dissipative medium 4=11307
    in critical mixtures 2=13336
    in crystals with defects, thermodynamic theory 2=6263
    crystals, including mol. rot. degrees of freedom 3=8352
    cyclohexane, resonance absorption 2=12376
    cyclohexane, solid and liquid, molecular relax. 4=16109
    cyclohexane, solid, reson. 3=8352
    cylindrical resonators, boundary-value problem, sound excitation 1=8187
    damping formulae from electron–vibration interaction, rel. to mag. field 3=4821
    damping meas. in glass sheets 0=1019
    design of absorbers on reflection principle 0=1012
    dielectric solid, temp. gradient due to thermal phonons 4=17354
    dielectrics and metals, rel. to thermal conductivity, theory 4=9841
    dielectrics, phonon interaction theory 4=20182
    diffusion, test-surface influence 2=7295

Absorption—contd
  acoustic waves—contd
    disks, infinite and disk strips 2=70
    double barrier with porous elastic intermediate layer, insulation effect 4=5345
    duct, lined, relation to lining absorpt. 3=18918
    in ducts, with absorbent linings, air-flow effects 1=8185
    ear, middle, rel. to damage risk 2=7065
    ear-protecting devices 3=16453
    ear-protector attenuation meas. using aural reflex 4=4976
    effect of eigenresonance of measuring chamber 0=16785
    electrolytes, rel. to multistage dissociation relaxation 2=10985-6
    and electromagnetic waves, analogies 4=8319
    emulsions and drops, attenuation of sound 3=14261
    ferrodielectrics, temp. depend., spin wave theory 1=14170
    in ferromagnetic dielectrics 0=2801
    ferromagnetic dielecs, effect of paramag. impurities 3=22654
    fibrous blocks, composite media model 1=8184
    fibrous materials, absorption coefficients 1=6930
    fibrous materials, flow resistance 1=6931
    filters for noise generated by liquid flow 2=13408
    finite-amplitude distortion calc. 2=17558
    flexibly supported absorbers 3=9572
    in flow channels, high wind vel. 3=18920
    foamed plastics, frequency dependence 0=16789
    in foams 4=8337
    foams, open-celled, effect of light coating on impedance and absorpt. 4=2786
    gas mixtures, molecular, thermodynamic theory 4=16148
    gases, dense, depend. on density, temp. and press. 4=5175
    gases, imperfect, classical calc. 3=18856
    in gases, resonance-tube method 1=18521
    glass staple fibre for test chambers 0=8759
    halogen gases 0=2183
    Helmholtz resonator, effect of shape of neck 4=24320
    Helmholtz resonators disposed about room 0=5119
    high efficiency system 0=1016
    hollow cylinders, sound insulation 0=19291
    hypersound, in isotropic dielectrics 2=12375
    ice, rel. to lattice defect behaviour 3=10644
    imperfect gases 4=8251
    linear passive systems, reciprocity violation 0=14737
    in liquid layer over viscoelastic solid 2=13409
    liquid mixtures, critical, corrected results 4=14162
    liquid, viscous, in elastic-walled vessel, disturbance 2=2683
    liquids, rel. to chemical structural relaxation 2=5108
    liquids, dense, depend. on density, temp. and press. 4=5175
    liquids, viscous and scattering, light, depolarization factor 3=21360
    longitudinal, u.s. meas. in isobutyl bromide 0=17736
    long-range shallow-water, bottom reverberation 2=2830
    long-range shallow-water, signal-level fluctuations 2=2831
    magnetoacoustic in conducting medium 2=5460
    materials of extremely high damping 0=19290
    meas., coeff., in small reverberant rooms 3=14280
    measurement, in cylindrical resonator 1=8186
    measurement, reverb. chamber techniques 3=14279
    measurement, transient pulses 4=14309
    meas., very active substances 3=9458
    metal, shear waves in plasma model, quantum theory 2=2050
    metal sheets, perforated, resonant structures 0=16805
    metallic substances, highly damping, temp. behaviour 2=5127
    metals, electron gas theory 2=23057
    metals, in mag. field, giant quantum oscill. 2=564
    metals in mag. field, quantum theory 1=19705
    metals in mag. field, quantum theory 3=4813
    metals, nuclear acoustic resonance absorpt. 3=20088
    metals, by paramag. reson. transfers between Zeeman sub-levels 4=6727
    metals, rel. to conduction electron props. 3=10593
    metals, theory 4=1389
    mud and sand, 4-50 kc/s meas. 4=21244
    noise abatement materials, dynamic characts. 4=28912
    noise insulation of layered flooring 2=5128

CO_2—air mixtures, molecular complexes 1=10547
CO_2, effect of H_2 and D_2 on relaxation time 3=16658
CO_2 interferometric meas. 0=16788
CS_2 0=14743
CS_2 vapour, as funcn. of temp. 0=8694
Cd, freq. at which high and zero mag. field effects are equal, 3°K 4=6730
Cd, at 131 Mc/s, in mag. field 2=12377
Cd, parallel field magnetoacoustic effect 2=20926
Cd, resonant absorpt. by open-orbit electrons 2=16601
Cd, single-crystal, 5-60 Mc/s range 3=12920
CdS, under d.c. voltage and illumination 2=3833
CdS, effect of illumination 1=11157
CdS, illuminated, oscillatory currents 4=7062
CdS, 10-200 Mc/s, photosensitivity 0=11574
Cl_2, gaseous and liquid state, relaxation 1=8161
$CoSO_4$, conc. solns., 0.2–2.0 Mc/s 4=5173
$CoSO_4$, solutions, aqueous, 0.025-2.2 mole/litre, 0.2-2 Mc/s, and dissociation 3=14160
Cu, attenuation, and relaxation of dislocations 0=1590
Cu, rel. to dislocation resonance 2=21014
Cu, effect on creep of springs 0=4563
Cu, shear wave attenuation in mag. field 0=523
Cu, shear waves, resonant, by open orbit electrons 4=6731
Cu single crystals, effect of thermal and mech. treatments 2=16599
D_2O vapour, attenuation 4=14214
Dy, in mag. field 1=3599
Fe-group ions, in crystals, acoustic e.s.r. 2=767
Fe-Ni (70/30), phase change study 1=7813
Ga, cyclotron resonance at 1.5°K 1=11186
Ga, giant quantum oscillations, effective mass determ. 4=17355
Ge, attenuation, 1-300°K 0=11573
Ge, n-type, and electron and hole scatt. 3=13063
Ge, pure and n-type 4=20201
Ge, rel. to electron—phonon relaxation peaks 2=23054
Ge, rel. to internal photoeffect 4=1391
Ge, temp. depend., at low temp., calc. 1=903
Ge, 300-500 Mc/s, rel. to theory 4=6724
H_2, and isotopes, rotational relaxation, 77°, 90° and 293°K 4=16149
H_2, para, 25.2°C, and relax. time for rot. degrees of freedom 3=14213
HCl, near critical temp. 2=13375
H_2O, sonoluminescence, u.v. spectrum 4=193
H_2O vapour, relaxation time 4=5245
H_2S, 25°C, 10^6 - 2 x 10^9 c/s atm., and relax. time for rot. degrees of freedom 3=14213
He, liquid, below 0.6°K 2=15839
He II, effect concentration He^3 0=3700
He II, liq., quantum hydrodynamics 3=7399
He II, liquid, calc. on four-phonon mechanism, <0.6°K 4=2908
He II, superfluid, size depend. in 3-phonon processes 4=24480
in Hg, at different freq. and temp., viscosity depend. 4=2675
in superconducting and normal Hg 0=232
Hg, normal and superconducting 0=8954
Hg, rel. to internal friction 2=15585
Hg–Tl alloys, rel. to internal friction 2=15585
KBr, 5-200 Mc/s, –120 to +300°C 1=901
KBr, nuclear resonance absorption, theory and expt. compared 1=3597

Absorption—contd
acoustic waves, ultrasonic—contd
KCl, 5-200 Mc/s, –120 to +300°C 1=901
KI, nuclear resonance absorption, theory and expt. compared 1=3597
LiF, 5-200 Mc/s, –120 to +300°C 1=901
LiF, effect of plastic deformation 2=20927
Mg, 5-75 Mc/s, 4·2° - 300° K 3=8353
Mg single crystals, during yield, var. 4=3986
Mg and Mg alloys, low-temp. attenuation, rel. to Bordoni peaks 3=22650
MgO, at microwave freq. and low temps. 4=20203
MgO, non-linear, 9 Gc/s, on $\langle 100 \rangle$ axis 3=20096
MgO, Mn^{2+} and Fe^{3+} phonon—photon double—quantum transitions 1=6071
$MgSO_4$ solutions in methanol and water 2=13337
Mn-ferrite, at high mag. field 4=20202
MnF_2, near Néel temp. 4=1388
MnF_2, v. h. f. ultrasonic wave attenuation rel. to phonon diffusion 4=30725
$MnSO_4$, aq. soln., rel. to H_2O, relaxation 0=6792
N_2, 0.45-12.6 (Mc/s) atm 0=14739
N_2, pressure depend. 0=16737
N_2, pressure depend. to 5000 kg/cm^2 1=6904
N_2, relaxation time 4=5245
N_2, relaxation time, 22°C 3=18857
N_2O, freq. depend. 1=8160
N_2O_4, dissociation rate meas. 3=4784
N_2O_4, gas 1=4376
Na-K liquid alloys 4=27173
NaCl, effect of crystal interstitials due to H_2O, 1.5-40°K 4=17351
NaCl, deformed, various dependences 1=17406
NaCl, in dislocation relaxation 4=28454
NaCl, 5-200 Mc/s, –120 to +300°C 1=901
NaCl, from effect on n.m.r. 4=12623
NaCl, method for dislocation meas. 3=15491
NaCl, rel. to optical unpinning of dislocations 2=10389
Nb, normal and superconducting, atten. meas. 4=11480
Nb, superconducting, shear, 75-225 Mc/s, and $2\epsilon_0$ 4=16355
Nb, superconducting, transverse waves, for $ql < 1$ 4=6729
Nb–Zn alloys, superconducting, model 4=411
Nb–Zr alloys superconducting, oscillatory behaviour 3=12035
Ne–He, A–He and K–He gas mixtures 0=14721
Ni, damping meas. 2=13418
Ni, supercond., and energy gap 4=18588
O_2, 0.45-12.6 (Mc/s) atm 0=14739
O_2, pressure depend. 0=16737
O_2, relaxation time 4=5245
O_2, relaxation time, 22°C 3=18857
in Pb, attenuation 3=4819
Pb crystal, effect direction superimposed magnetic field 0=9849
Pb, effect of longitudinal mag. fields 3=25192
Pb, at 131 Mc/s, in mag. field 2=12377
Pb, supercond., and energy gap 4=18580
PbTe, de Haas—van Alphen type oscs. 4=6732
S, liquid, 45-155 Mc/s range 4=2677
SO_2, aq., rel. to ionic dissociation 2=5012
Sb, in mag. field, de Haas—van Alphen oscill. 3=4818
Sb, in mag. field, geometric resonance 3=4817

- bubble for radiating high power l.f. sound in water 0=19288

Acoustic transducers—contd
- calibration, 5 Mc/s, by light diffraction 2=7307
- calibration of impulse response 2=2846
- calibration from near-field data, formulae 4=5303
- calibration by reciprocity methods 0=3588
- calibration, shock-wave technique 2=17547
- capacitor type, with solid dielec. for waterborne sound 0=5088
- cavitation limit, nearfield effects 3=23976
- ceramic capacitors as sound probes in liquids 1=16041
- ceramic piezoelec. spherical, prestressed electrodes 3=5504
- ceramics, ferroelec., mechanical Q and Young's modulus, stress amplitude depend. 0=18248
- composite, electromechanical coupling coeffs. 4=2781-2
- composite type, electromechanical coupling 3=7293
- composite, u.s. intensity gain 2=5103
- computer elements 1=6690
- depletion layer, analysis 4=24316
- design from loss distrib. in vibr. bodies 4=27241
- dielectric capacitance, sensitivity var. 4=21234
- diffraction consts. of suitable shapes 4=8342
- digital compressed-time correlators and matched filters 4=8328
- ear-microphone speech transmission 0=3363
- earphone DT48, free-space propagation const. 4=2734
- earphone, use as vibrotactile stimulator 1=15367
- earphones, circumaural, and earphone cushions, effect on auditory threshold 4=4982
- earphones, condenser, with multiple solid dielec. layers 3=1780
- earphones, free-field response, data for Beyer DT48 1=213
- earphones, insert type, artificial ear for 0=14331
- elastic vibr. prod. in disk by ferromag. resonance 3=23958
- electrochemical press., rel. to solion infrasonic microphone 4=24318
- electrokinetic microphones, with glass filter, 20-100 kc/s 0=5267
- electromechanical, classification, equiv. circuit 0=16783
- electromechanical coupling factor 4=5304
- electromechanical coupling factor, duality of 4=5305
- electromechanical, 4-terminal network eqns., duality 0=16784
- electromechanical, frequency curves meas., compensated apparatus 0=5089
- electro-mechanical, resonance, very-high output 3=5493
- electronic acoustic image converter 2=9345
- electronic pulse equipment 0=8748
- electrostatic, plane, characteristics 1=2827
- energy transfer improvement, with nλ/4-layers interposed 0=125
- equivalent circuits 0=5091
- equivalent elec. circuits 1=2814
- farfield characteristics 3=14257
- ferrite, with strong piezomag. coupling 4=8330
- ferroelectric ceramic cylinders, open, in underwater transducers, performance 4=14274
- Ferroxcube ferrites, effect of longitud. pressure 1=11818
- flexural disks in rigid plane, self- and mutual-radiation impedance and beam patterns 4=21233
- garnets, nonmagnetic, microwave elastic props. 3=25601
- Gauss radiator, applic. to materials testing 1=204
- hydrophone calibration 0=19307
- hydrophone calibration in vibrating liquid 2=17575
- hydrophone for marine animal sounds 2=17576
- hydrophone, piezoelec., sensitivity meas. 3=7292
- hydrophone, in a pipe, impedance seen 3=9554
- hydrophones with low equiv. noise pr. 1=8179
- hypersonic coupling, piezoelec. disk data, 500-1000 Mc/s 4=29708
- ideal forms, mechanical coupling, electric quadrupole 0=5087
- image converters, operation, load impedance selection 1=16038
- internal u.s. field, optical measurement 1=9445
- for launching shear waves, single and four crystal types 4=29710
- line-and-cone, for underwater use. 3=206
- loudspeaker, stereophonic, push–pull, in 2-channel stereophony 4=5308
- loudspeakers, review 2=15699
- magnetostriction ferrite materials 1=5323

Acoustic transducers—contd
  magnetostrictive, optimum conditions for transmission and reception 1=12951
  magnetostrictive-stack, line array at air–water surface, interaction radiation resistance 4=8329
  magnetostrictive stack, radiation resistance 0=19289
  magnetostrictive, window-type, mechanically loaded 0=5092
  mechanical bias, origin of term 3=23977
  mechanical props. tester for flabby materials 3=3783
  mechanical, for use in high-noise conditions 1=10565
  microwave 4=8350
  mutual coupling in arrays 3=18921
  narrow-beamwidth, design 3=18919
  optico-acoustic gas analysis, sensitivity increase 0=4752
  passive reversible distrib.-coupling unit, theory 2=7287
  Permendur-2 V magnetostrictor, resonance under compression 2=2847
  piezoelectric ceramic, effect of high coupling in equiv. network 4=16180
  piezoelectric damped and layered, operation 4=24315
  piezoelectric, effects of static stress 1=17856
  piezoelectric, electromech. coupling coeff. meas. 3=5494
  piezoelec., parameters determ. 2=17545
  piezoelectric, theory and props., review 0=5090
  piezoelectric, transient performance 1=8201
  piezoelectric, transients, equiv. circuit 1=8200
  piston, at marginal test distances, calibration 4=8355
  preloading, for high-pressure operation 2=7304
  pr.-measuring systems, calibrator 0=8757
  pressure resolution in turbulence 3=9484
  probe, thermoelectric, for sound intensity meas. in water 4=2796-7
  quartz, bonding to metal at liq. He temp. 2=11232
  quartz, fundamental operation in v.h.f. range 4=2780
  quartz source, "piston" parallel setting meth. 2=11452
  quartz, u.s., equivalent diagram 2=9347
  quartz, u.s. plane progressive wave production 4=275
  radiated sound power, reciprocity parameters 2=17550
  radiation resistance increase for "tonpilz" (underwater radiator) 0=12458
  reversible, calibration 0=6886
  sectional ultrasonic concentrators, analysis 0=998
  Sell-type electrostatic membranes, oscillatory props. 1=8199
  semiconductor piezoelec. elements 4=7058
  semiconductor transducers 4=10087
  sonar projector arrays, erratic velocity distrib. 3=219
  for spark chambers, cylindrical capacitor 4=27729
  thickness effect on u.s. vel. meas. 4=27266
  transient response meas., by analysis of response to square shock wave 4=5328
  tuned capacitor detector, for megacycle range 0=16800
  tunnel-diode electromechanical elements 2=17546
  ultrasonic, acoustic contact with rocks 4=11301
  u.s., backing materials of specified impedances 2=2832
  ultrasonic, CdS with Cu diffused layer 3=9566
  u.s. delay lines for d.c. pulse transmission. 3=205
  and ultrasonic delay lines, frequency characteristics, effect of intermediate layer 1=16013
  u.s. high-power, piezoelectric ceramics 4=5302
  u.s., image converter, electronic 2=11477
  ultrasonic image convertors 1=8194
  u.s., low temp. join by isopentane of PZT to Na 4=27272
  u.s. pulse calibration system 1=2829
  u.s., for v.h.f. waves 2=19650
  underwater arrays, piston resonators 3=225
  underwater, calibration, free-field reciprocity method 0=14734
  underwater, calibration from nearfield data 4=27258
  underwater, far-field characteristics determ. 3=1778
  underwater type, temp. effect on response 1=9456
  use in meas. of elastic and anelastic props. of solids 4=28911
  vibration control by resilient mounts 3=14231
  vibration pick-up calibration 0=19323
  vibration pickups, calibration (erratum) 2=9348
  vibration, use of high-strength ceramics 4=21235
  water-borne, calibration in 5-250 kc/s 3=7291
  $BaTiO_3$ disc and cylinder electromechanical const. design charts 4=16181
  $BaTiO_3$, low-resonant-frequency 2=7305

Acoustic transducers—contd
  $BaTiO_3$ piezoceramic, rel. to light modulation 1=18530
  $BaTiO_3$ plane piezoelectric radiator, analysis of distortion 0=6867
  $BaTiO_3$ probe, use with heterodyne voltmeter 0=6882
  $BaTiO_3$, sandwich form, electromech. impedance 3=9555
  $BaTiO_3$ small ultrasonic generators 1=206
  $BaTiO_3$ spherical shell, for air shock-wave meas. 0=130
  $BaTiO_3$ tubular oscillators, radial resonance, external radiation, acoustic pump 1=205
  $BaTiO_3$, u.s., adhesion type 0=8749
  $BaTiO_3$ for u.s. waves in liquids 0=129
  CO_2 relaxation time meas. by optico-acoustic receiver method 0=4186
  Ni-based alloys for magnetostrictive transducers 1=10564
  Ni magnetostrictor, resonance under compression 2=2847
  NiCo ferrite, as acoustic pickup 1=2487
  Ni ferrite, as acoustic pickup 1=2487
  NiZn ferrite, as acoustic pickup 1=2487
  $PbTiO_3$ ceramics, piezoelec. props. 1=17854
  Pb titanate–Pb zirconate ceramics 2=17548
  $PbZrO_3$ ceramics, piezoelec. props. 1=17854
  YFe garnet sphere, cause of magnetoacoustic resonance 1=6408
Acoustic wave propagation
    See also Absorption, acoustic waves; Dispersion, acoustic; Doppler effect; Helium, liquid, sound propagation; Shock waves; Velocity, acoustic waves.
  acoustic line, surface burnishing rel. to surface attenuation 3=21498
  acoustic rectifiers 0=19272
  acoustic waveguides, irregular, theory 2=5105
  aerosols, coagulation under hydrodynamic forces 0=139
  air, dispersion, humidity effect mechanism 4=8253
  amplification by interact. with cond. electrons in mag. field, quantum effects 4=1392
  amplification in ionized gas in mag. field 2=22316
  amplification in semicond. and metals 3=8354
  amplitude transformers for high magnification 3=23980
  animal cochlear fluids, 400 c/s 4=13994
  anisotropic, analytical method 4=5268
  antiwaveguide propag., in laminar inhomog. media 1=4406
  aqueous solns., sound characteristics 2=19559
  arctic deep-water 4=29263
  Arctic Ocean, long-range 1=20805
  Arctic ocean, reverb. from ice layers 4=4749
  asphalt rods, velocity and damping meas. 4=265
  in atmosphere, symposium 1=1522
  atmosphere, upper, sound channel 2=19212
  in atmospheric turbulence, amplitude fluctuations 4=7866
  band-limited noise in layered wave guide 0=126
  bone conduction, review and work of Békésy 3=3668
  Bose systems, normal and second sound 4=8112
  bounded media, liquid and solid differences 1=194
  c.w. signals, in deep ocean 0=10719
  in cavities by flow rate change 1=12937
  characteristic waves of a uniform plane impedance surface 4=5017
  collision coeff., molar sound volume 2=19648
  conducting medium in magnetic field 0=5392
  in conduit combinations, approx. formulae 0=5078
  continuous compensated systems, concentration coeff., approx. calc. 4=14277
  convergent zones in sound channel, calc. 2=17552
  converging wave fronts in dissipative medium 4=11307
  in crystals, adiabatic processes 1=3601
  cylindrical wave reciprocity parameter 1=6927
  cylindrical waveguides, field structure 0=19271
  damping by ideally rough surface 2=5111
  deep-water, Lloyd-mirror effect. 3=213
  deformed elastic materials, acoustoelastic effect 1=4408
  disks, infinite, and disk strips, analogy 2=70
  distortion in dissipative, non-dispersive medium 4=5318
  distortion, Fourier analysis 1=9447
  disturbance by spheres and segment obstacles, meas. 4=5317
  in ducts, with absorbent linings, amplification, air-flow effects 1=8185
  in ducts, absorbently lined, characteristic parameters 0=16762

Acoustic wave propagation—contd
- ducts, attenuation, relaxation technique 2=83
- in ducts carrying high-speed flows 1=1784
- in ducts, with side branches 0=6857
- e.m. wave analogues 1=199
- effect of adsorption on boundary-layer losses 2=7255
- effect of reflecting plane on arbitrarily oriented multipole 1=5330

Acoustic wave propagation—contd.
  α-quartz 3=20087
  quartz, plane-wave, rel. to elastic moduli 2=23727
  quasi-Rayleigh waves in an elastic layer 0=8732
  Quincke tube, theory 3=11863
  radiation from piston in nonrigid baffle 3=7288
  random medium, rel. to array characts. 4=21237
  in randomly–inhomogeneous medium 4=8338
  ray path calc., variational method 4=14279
  ray tracing, simplified computations 2=13238
  relations between amplitude and phase variations 0=120
  relaxation in metals with dislocations 1=17407
  in relaxing media, finite–amplitude waves, 2nd approx. 1=4407
  resonance, effect of thermal motion 3=16706
  rods, of building material, low-pass filter model 0=14723
  rods, rubber-elastic materials 0=14722
  rooms, almost anechoic 2=15713
  rooms, growth and decay transients meas. 3=3857
  rooms, review 4=16191
  rotation by magnon–phonon interaction 2=16602
  rotation of plane of polarization in paramagnetic 2=20928
  rubber, stretched, velocity and damping meas. 4=265
  rubber, in two-layered model 1=16024
  sapphire 1=3602
  sawtooth waves in electrolytes 1=18517
  scalar field, in medium with temp. fluctuations or turbulence 4=8338
  in sea 0=19267
  sea reverberation levels, probability distrib. 4=23712
  sea, surface reflection, refraction effects 4=7821
  in sea, transverse correlation on wave-front 1=4409
  seasonal variation, expts. on Scotion Shelf 2=17557
  semiconductors, amplification by cond. electrons, mag. field depend. 3=25194
  semiconductors, amplification, by electron–phonon interaction 3=20092
  semiconductors, longitudinal space-charge waves 3=22920
  in semi-infinite stratified medium 4=11304
  shallow lake 2=2836
  in shallow water 1=11811
  shallow water, integral solution of sound field 1=5326
  in shallow water, l. f. sound 0=19268
  shallow water, moiré fringe analogue 0=10718
  shallow water tank, theory and expt. 3=16620
  shallow-water, under-ice, in Barrow Strait 0=14726
  ship safety signals 4=5300
  shock-wave origination at fluid interfaces 0=5084
  shot signals in deep ocean 2=2826
  sinusoidal soln., unique conds., sharp boundaries 0=1204
  slot in rectangular tube, end correction 3=21497
  small bodies moving in gases, emission theory 3=1719
  small scatterers, random vol. distrib., bulk parameters 4=24321
  solar chromosphere 4=26950
  at solid–liquid boundary 0=2198
  solids, dielectric, second-sound conditions 4=12620
  solids, interatomic shocks 2=6400
  in solids of limited size 0=990
  solids, resonant amplification by cond. electrons 3=20093
  solids, second sound, dispersion reln. 4=12621
  solids, second sound, macroscopic theory 3=25193
  solids, secondary wave generation with distance 4=12619
  solutions, aqueous, relaxation, meas. principles and methods 0=19124
  sonar equations, general form 2=13406
  sonic stationary wave, press. and temp. depend. 0=5100
  sound amplification in longitudinal mag. field 4=22489
  sound fluctuations during shallow water propag. 2=5115
  sound radiation in terms of pressure independent of sound speed 3=18924
  source in moving fluid element, energy flux 0=16782
  source near velocity discontinuity 0=16781
  spherical and cylindrical waves in viscous heat-cond. medium 4=8336
  spherical sound beams, phase jump at focus 2=5107
  spherical waves from point source 2=9340
  spherical waves, viscous thermally conducting medium 4=278
  spheroidal wave functions 2=1228
  spheroidal wave functions, prolate spheroid radiator 2=1227
  square-wave pulse, in underwater channel 0=123

Acoustic wave propagation—contd
  steel, stainless sintered, impedance characts. 4=22487
  steel wool 3=11862
  stepped structure for prescribed reflection coeff. 2=15685
  stepped transmission systems, synthesis 1=5325
  stepped waveguide transformers and filters 1=12943
  stratified media, applying to deep ocean 0=10720
  structure-borne sound, damping at joints, theory 1=8208
  surface, plane, nonuniform impedance 4=11274
  tall buildings, loss measurements 0=19337
  in temp. and wind stratified medium 2=11456
  thick sedimentary in fluid 0=2195
  in three-layer medium, with aqueous top layer, plate waves 1=16016
  toroidal tube filled with liquid 2=1231
  transformation at conductor boundary, in magnetic field 2=72
  transformation at conductor boundary, in magnetic field. 3=208
  transmission line, resonant behaviour 3=14238
  transmission structures, reflection and cut-off 1=16028
  tube, with wall rather than gas losses 4=8335
  tubes, effect of steady air current 4=8331
  tubes with periodic walls structure, and e.m. waves, analogies 4=8319
  two-phase mixture, anisotropic, with cubic symm. 4=12624
  two-phase mixtures, velocity, compressibility 2=2828
  in underwater channel, from pulsed point source 0=122
  underwater characteristics in Arctic Ocean 3=13652-3
  underwater, intensity anomalies caused by velocity gradients 1=6928
  underwater, moiré-fringe analogues 1=8182
  vapours, saturated 2=11427
  vibrating surface, influence of absorbing covering on propag. 4=5314
  viscoelastic fluids 1=12941
  viscous and heat cond., and relax. media 4=27259
  in viscous media, wave eqn. 0=16763
  in water, effect of cavitation 1=11812
  in water, effect of surface waves on ducted propagation 1=4336
  into water, high power l. f. sound, bubble transducer 0=19288
  in water over sediment 1=10567

Adsorption—contd

description, metals, of gas, meas. by elastic relaxation 4=10621
desorption from cathodes, mass-spectromeric studies 1=9430
desorption energy spectra, thermal resolution 3=3368
desorption, flash, kinetic and experimental basis 1=4083
desorption, rubber, of gas, diffusion mechanism 4=4676
diamond, ads. of gas, rel. to friction in high vacuum 4=23152
diamond, semicond., (100) and (111) surfaces 4=26704
dielectric properties of adsorbate 1=20678
diffusion, self, kinetics and thermodynamics 3=9376
dilute gas by solid at high temps. 2=21572
p-dimethylaminobenzonitrile on polyamide 2=15097
dipole molecules on metal films, elec. cond. effects 2=621
direct observation of individual adatoms 2=17072
discharge chamber walls, ads. of H_2 3=7451
dispersion energy calc. 4=13689
dried skim-milk powder, water adsorpt. 4=2117
dye mols. by cellophane foil 3=20492
dyes in solution, effects on reflection spectrum 4=16119
effect on acoustic bounda y-layer losses 2=7255
effect on cathodeluminescence of phosphor 0=1761
effect of chemisorption on work function 2=20011
effect on elec. cond. of ZnO 2=16759, 18753
effect on GaAs laser near-field emission patterns 4=24915
effect on molecular streaming 0=2186
effect on photo-exoemission 4=24732
effect on time variation of Joshi effect 2=19917
electrochemical reactions, use of Gibbs adsorption eqn. 3=5168
electrochem. study 3=13571
electron diffr. exam., low energy 4=7664
electron emission, field, Fowler–Nordheim curves 4=3023
energy parameters 2=8890
enthalpy, free energy and entropy, correl. 2=2432
equilibrium parameters, absorbent–binary gas mixture 4=15827
etchant impurities on Ge, effect on elec. cond. 0=9959
ethane on Ir 2=15099
ethanol on Al_2O_3 surfaces, i.r. spectral study 3=3362
ether mols. on Ge, effect on recomb. centres parameters. 4=20361
ethylene on Ir 2=15099
exchange processes in fixed columns, theory 0=3466-8
Faradaic impedance and rectification 2=2451
fatty acids on LiF, effect on dislocations 2=23182
fibres, hygroscopic, of moisture and desorption, convection 4=23597
field desorption of N and CO, corrosion of W and Ir 3=18396
film formation theory, cryolite, CaF_2, ZnS 3=13560
films, effects on dielectric props. 2=12553
films, metal, of H 4=2133
films, solid, rel. to irrad. 3=6896
films, solidified gases, of H_2, ~11°K 4=13686
fission products on ThO_2–UO slurries 0=13373
flow of adsorbable gases and vapours in microporous medium 3=3823-4
fluorescein on Al_2O_3 films 2=4183
fluorescein on Al_2O_3 surfaces, luminescence 2=1484
gas desorption, in vacua at rubbing surfaces 1=15983
gas on ideal semiconductor surface 1=15181
gas monolayers, structure determination by electron diffraction 1=4085
gases, data correl., low press., supercrit. temps. 4=29192
gases, electron diffraction study 1=11598
gases, in flow through graphite 2=9297
gases, flowing, on walls of tube 2=9296
gases, by Ge and Si; mass-spectrometrical investigation 0=4750
gases, on graphite 2=15096
gases, on Hg, surface tension 2=1126
gases, ionically induced, in high vacuum 4=10615
gases, lattice liquid model 4=30885
gases on metal films, effect on elec. cond. 1=17611
gases on metal films, surface potential change, meas. by static capacitor 3=9824
gases, near bulk critical temp. 2=8888

Adsorption—contd

gases on Pt, electron diffr. study 4=23602
gases, on quartz 2=15098
gases, residual, effect on electron props. of surface 2=1215
gases, on semiconductors, rel. to work function 2=22240
gases, by silica gel, γ-ray treated 0=4745
gases on solids, high temp., quantum mech. calc. 0=14147
gases on solids, lattice vacancy theory 3=3363
gases, in Terylene 2=23923
Gibbs isotherm 2=15095
on glass, i. r. spectrum obs. 4=7728
at grain boundaries in solids 3=1383
graphite, physical ads. of Ar and Kr, theory and expt. 4=23592
graphite, ads. of Ar, rel. to heat transfer 3=3907
graphite adsorption of benzene, thermodynamic functions, calc. 3=18398
graphite, ads. of CO and water vapour 3=13569
graphite, of inert gases, dispersion energy calc. 4=13689
graphite, ads. of I, 100° to 800°C, 0.01-15mm Hg 4=30889
graphite, ads. of monatomic mols. thermodynamics 3=13572
graphite, ads. of Xe, 2nd and 3rd virial coeff. 3=5150
halogens, on metal films 1=20688
heat of immersion values 2=17426
heterogeneous and homog. surfaces, multilayer region 3=6888
heterogeneous surface, homologous gas series 3=20935
heterogeneous surface rates, characterization 3=20936
heterogeneous surfaces, distrib. density functions 3=6886
n-hexane, on graphitized carbon blacks, isotherms 2=10944-5
hydrocarbons, by metal films, decomposition 3=20939
hydrogen on graphite 1=4084
hydroxyl groups on silica, H bond interaction 1=20691
ice nucleability on ZnSe 4=5457
inert gases, "attachment" to solids by neutron irrad. 2=2090
inert gases on carbon black 1=20684
inert gases in glass surface, re-emission by bombardment 2=3091
inert gases, mechanism of ion pumping 1=20677
inert gases, on metals, discharge tube technique 2=11230
inert gases on semiconductor surface 1=20686
i.r absorption bands of adsorbed molecules 1=840
infrared spectroscopy of adsorbed molecules 4=30884
interaction potentials of nonpolar molecules with graphite 1=7887
intermediates in electrochem. catalysis 4=7760
internal boundaries, and solid solution decomposition component redistrib. 4=26543
inverse cube law verification 2=17070
ionospheric D-region, N oxide, rel. to positively charged particle prod. 4=10714
ions on AgBr microcrystals, sensitivity of nuclear emulsion 2=5555
ions on glass, mechanism 1=9433
ions on Pt, radiochem.–electrochem. data correl. 2=15105
ions, suspensions, colloidal, lamellar 3=11364
isotherm equation selection 4=23591
isotope separation of diatomic mols., theory 3=22513
isotopic species, quantum treatment 2=19117
kinetic eqn. for monolayer 4=7714
Langmuir isotherm, and saturation coverage and equilib. const. errors 4=23594
lattice liquid model, adaptation 4=26716
layers, n.m.r. investigation, review 4=2127
linear molecules, sequential filling of line 2=19374
liquid, condensation nuclei dimensions 4=27163
liquid–gas interface, and instability 4=21083
from liquid mixtures at solid surfaces 0=14149
liquid solns., binary, two-dim. soln. model 2=9270
liquid surfaces, of ions, study using and active recoils 4=8192
liquids, in porous solids, theory and exper. 0=8336-7
macromolecule, flexible, at plane surface 3=6892
macromolecules, flexible, model 3=6893
mass spectrometer flash obs., gases 4=17845
measurement techniques using radionuclides 2=19115
meas. in vacuum system, using radioactive tracer 0=14152
mechanism, rel. to semiconductivity and other surface props. 1=2549
metal–electrolyte surface, neutral substance 3=6889
in metal films, changes in elec. resistance 2=3984

Adsorption — contd
- in metal solutions, Semenchenko molecular theory 4=8184
- metal surfaces, interaction forces with inert gases 4=26717
- metals covered by metal particles, atom and ion desorption energies 4=30887
- metals, films, of electropositive atoms, effect on resistance and work function 3=13040
- metals films, of Kr, Xe, and surface area meas. 4=13692
- metals, study by secondary ion emission 2=842
- methane on Ba films, in thermionic current presence 2=843
- methane from H_2, 76°K, partial press. and effective ads. press. 4=13687
- methanol on Al_2O_3 surfaces, i.r. spectral study 3=3362

- transition metal oxides on alumina, surface configuration from Al^{27} n.m.r. 4=7342
- transition metals, field electron micr. study 3=3369
- two-dimensional condensation, supersaturation phenomena 4=7721
- two-dimensional second virial coeff. 4=29190
- in vacuum, partial and ultra, and desorption 3=18862
- Van der Waals 2-dim. eqn., above and below crit. temp., verification 2=4498
- vapours, mixed, at liq. boundary surfaces 2=15142
- vapours on porous solids, dielec. behaviour 2=21571
- vapours, two-phase flow, theory 3=25779
- at very low press. using ultra high vac. techniques, study 4=7716
- water on acrylic ester polymers, effect on dielectric props. 2=16767
- water, ads. of foreign mols. on surface, evaporation enhancement, expt. 4=8517
- water adsorbed on sucrose chars, proton spin polarization 1=3953
- water on AgI and CuO powders, ice nucleation 2=6784
- water in AgI—KI—H_2O 3=23522
- water in Al_2O_3, paramagnetic relaxation times 1=20239
- water on alumina with adsorbed transition metal oxides, proton spin—lattice relaxation time 4=7342
- water, on anodized Al_2O_3 layers, effect on dielec. props. 1=1124
- water on cellulose, effect on microwave permittivity 4=1656
- water on γ-alumina, dielec. props. 2=8891
- water on Ge, acceptor props. 2=2143, 8325
- water on Ge, effect on carrier recombination 2=18676, 23337
- water on Ge, effect on fast states 3=20138
- water—gelatine [silica gel], rel. to long and short n. m. relax. time 4=28263
- water in mica crystals, adsorption energy rel. to crystal props. 4=7693
- water, on n-type Ge powder 3=6890
- water and organic cpds., on Ge, effect on carrier recomb. 2=8329, 10466
- water on $PbCl_2$, effect on u.v. absorpt. spectra 2=10604
- water on proteins, effect on elec. props. 2=6473
- water on quartz, thermodynamic quantities meas. 2=2435
- water on silica-supported Fe, i.r. spectrum 2=23963
- water, by solids in air, and dielec. prop. changes 4=20825
- water sorbed on cellulose, NMR study 1=11602
- water vapour, on cell wall, rel. to i. r. absorption meas. 4=5247
- water vapour and gases on Ge, kinetics 4=20362

Adsorption—contd
water vapour, on insoluble metal halides 3=1381
water vapour, on porous glass 2=15101
water vapour by porous glass, strength and length changes 4=23544
water on W, 80°–400°K 2=8897
work function change due to adsorbed molecular layer 0=5327
zeolites, ads. mol. e.s.r. 4=23613
Ag, chemisorption of S on (111), (110) and (100) faces 4=26724
Ag, desorption energy from Mo and Ni 3=23521
Ag films, effect of gases on elec. cond. 4=7713
Ag, of air, H_2, effect on work function, and dipole moment 4=11683
Ag, H adsorption, para-ortho conversion 4=23605
Ag on AgCl, energy 3=16842
AgBr precipitates, of H^+ and OH^- ions from soln. 3=5165
AgI, adsorption of water vapour 4=23606
Ag_2O, ads. of cations, anions, in dilute solns. 3=13608
Ag–Pd, of H from soln., Ag conc. effects 4=30893
Al, of air, H_2, effect on work function, and dipole moment 4=11683
Al films, and oxide formation 0=8335
Al, H adsorption, para-ortho conversion 4=23605
Al_2O_3, colloidal, on SiO_2 4=23684
Ar on graphite 2=6856
Ar–graphite, A–Bn systems, isotherms 2=17070
Ar, on graphite, equilibrium 0=21296
Ar, on graphite, specific heat calc. 4=2132
Ar with graphitized carbon black 2=6854
Ar on graphitized carbon black 3=11324
Ar, on hexagonal BN, multilayers 3=6894
Ar in Vycor glass and chromia gel, thermodynamics 4=20818
Ar, on water, n-hexane, n-octane, methanol 3=18795
Au, of air, H_2, effect on work function, and dipole moment 4=11683
on Au films at –55°C, effect on reflectivity 2=23917
Au, vapour deposited on glass, ads. of O_2, surface potential meas. 4=23598
Au, H adsorption, para-ortho conversion 4=23605
Au, on Mo, and desorption, radiotracer meas. 4=2130
Au on Mo surface, 2×10^{-9} torr 3=5149
Ba dispenser cathodes, W-based, emission fluctuations 1=16365
Ba, field desorption from W 3=3360
Ba layers on W_2C, rel. to field emission 1=20692
Ba on oxygen-covered W, effect on work function 2=15104
Ba on polycryst Au, photoemission characts. 4=24731
Ba on thorium oxide 2=17861
Ba^+, desorption from Re 3=8930
BaO desorption from W by elec. field 4=7722
BaO on metal films, elec. cond. effects 2=621
BaO on semiconductors, rel. to electron emission 2=22241
BaO, on Cs_3Bi photocathodes, work functions 1=13111
BaO, on Mg_2Sn and InAs, rel. to photoelectricity 2=1483
Ba on Rh single crystal 4=30892
Ba on Si and Be, rel. to secondary electron emission 4=11701
BaO on W 2=17074
Ba on W, secondary electron emission effects 2=1496
Bi, binding energies from beta-decay atomic recoil 2=15106
Bi on mica, rel. to β-decay atomic recoil 2=15106
Bi_2Te_3, no adsorption of CO, N_2; H_2O sticking coeff. 0=14151
C, activated, adsorption of CO_2 4=23553
C, activated, adsorption of ethyl chloride 4=23553
C, activated, adsorption of N 4=23553
C black, from two-component systems, layer thickness 2=8893
on C, paramagnetic resonance 0=16717
C, strong ads. of O_2, interaction with free spin centres in C, paramag. res. study 4=20822
on C surfaces, effect on surface area meas. 4=23551
CH_4 on graphite 2=4497
CO on alumina 2=17076
CO chemisorbed on Fe, i.r. spectrum 2=12966
CO on chromia-alumina and Al, i.r. spectra 3=3359
CO, photosorption on ZnO with O excess 1=4082
CO on silica-supported Fe, i.r. spectrum 2=23963
CO on Ba, ultra high vacua 3=5474
CO on Fe, molecular rotation, spectral study 2=19116

Adsorption—contd
CO, on Ge, effect on Auger electron ejection by He^+ and Ne^+ 1=10737
CO and N on polycryst. W, interactions 4=23607
CO, on Ni, using radioactive tracer 0=14152
CO, on NiO, depletive 3=25781
CO on Pt, mechanisms, electrochem. study 3=13571
CO, on Ta, dissociation, O_2 field emission patterns 4=26726-7
CO on Ta, field emission 3=14623
CO, on W 0=3325
CO on W, effect on work function 2=20011
CO on W, kinetics 2=8917
CO, on ZnO, rates near 100°C 0=752
CO_2 in "Aerosil" silica 3=18399
CO_2 on chromia-alumina and Al, i.r. spectra 3=3359
CO_2, on GaSb 1=4078
CO_2 on Ni, –80°C to 100°C 2=15103
CO_2 on silica-supported Fe, i.r. spectrum 2=23963
CO_2, on W 0=751
CO_2 and O, on W, field effects in electron emission microscopy 0=5356
CO_2, on ZnO 0=8002
CO_2 on ZnO powder, effect on i.r. spectrum 2=6582
Ca ions, on quartz, rel. to pH and concn. 4=4672
$CaCO_3$ (calcite) and electrode potential 3=8968
Ca, Na, selective adsorption at ionized interface 2=2431
Ca, on W, effect on thermionic emission 2=1477
Cd films, rel. to conductivity and surf. potl. change 4=20326
CdS single crystals, ads. of O, surface states 4=28421
Ce–Al–Th alloy, as CO_2 getter at high temp. 2=5087
Cl, on Ge, clean 2=2434
Cl, on Ni films, surface potential 1=20688
Cl, on Ti, Al and Pt 2=19120
Cr ions, by exchange of ions, e.p.r. spectrum 3=8707
Cs^+, desorption from Re 3=8930
Cs^+ desorption from W, kinetics 2=17073
Cs by activated charcoal 2=6857
Cs, field desorption from W 3=3361
CsCl, on metal films, elec. cond. effects 2=621
Cu, ads. of CO 3=11322
Cu, of air, H_2, effect on work function, and dipole moment 4=11683
Cu surfaces, impurities, crystallography 4=4671
Cu_2O, ads. of air and water, rel. to luminescence and elec. cond. 4=1770
Cu_2O, mag. susceptibility changes during adsorpt. of O and CO 4=23596
D on graphite 2=4497
D_2, on Mo, ultra vacua technique 1=15974
Fe, cast, and polymorphism, simulation by NH_4Cl on adding $NiCl_2$ 4=23273
Fe films, of N_2, effect on conductivity and work function 4=7727
Fe, molten, ads. of N_2 4=21111
Fe powder, H^+ and OH^- aqueous ions, ads. isotherms 4=4674
GaSb, ads. of oxygen 4=4673
GaSb, (111) and (111) surfaces 2=23908
Ga, by Zn, and diffusion 4=26729
Ge, adsorption props. in presence of surface charge 1=1457
on Ge, effect on elec. props. of corona discharge, mechanism 2=2152
Ge, of polar liquid mols., in crystal defect recomb. 3=22709
Ge surfaces, various gases 0=12115
Ge, on W, field emission study 3=8928
GeO_2, ads. of cations, anions, in dilute solns. 3=13608
H atom on crystal surface, i.r. spectrum 4=2131
H, atomic, decreased by thin Teflon film 2=10225
H, atomic, on glasses, interaction 0=1969
H atoms, polarization on ferromagnetics 1=13970
H, atomic, on Si, effect on surface elec. props. 1=8948
H by C rel. to vacuum pump 2=5079
H chemisorption on Ni, X-ray absorption 2=6587
H on Ge films 3=3397
H and D on glass, at 20° and 17°K 4=13688
H on graphite 2=4497
H on Ir 2=15099
H, by MgO, below 20°K, endothermic conversion of para to adsorbed equilibrium 3=20994

Adsorption — contd
- H on metals, embrittlement 2=8744
- H and N on Mo ribbon 1=11600
- H on Ni, effect on magnetization 1=11432
- H on Ni (110) surface, formation of (2 × 1) structure 2=23922
- H, on Ni, rel. to elec. and mag. props. 4=6929
- H, ortho-para separation 0=3329
- H in β-Pd 2=10932
- H by Pd, electrochemical method 2=23207
- H, on Pd, excess free energy 0=16379
- H, partial, on W in high vacuum 0=18448
- H on Si, i.r. internal reflection study 3=18397
- H on steel, effect on microcracks 2=14908
- H, on Ti, effect on two-quantum annihilation 4=28433
- H, on W 0=6424
- H and Xe, on W, rel. to surface features 3=3369
- H_2, effect on supercond. of thin Tl films 0=5239
- H_2, hindered rotator model, second-order perturbation calc. 0=16392
- H_2, isotopic, at low temps., theory 4=23595
- H_2, on metallic surfaces, experimental study 0=4748
- H_2, on Mo, ultrahigh vacua technique 1=15974
- H_2 on Ni films, rel. to electrical resistance 1=11599
- H_2, on NiO, depletive 3=25781
- H_2 in polyethylene and teflon 1=9163
- H_2 on transition metals, rel. to hydride phases 4=10619
- H_2, on W, atomization 0=9779
- HCN, DCN, spectrum, on metal oxides, as crystalline HCN 4=10618
- HCN on NaCl, CsCl, NaI films, bonding 4=29198
- H_2O, and condensation, effect of formation of liquid embryos 4=10718
- H_2O, in Vycor glass, freezing 0=12118
- H_2O, on $Mg(OH)_2$, dielectric study 0=14945
- H_2O and Xe on porous glass 4=10630
- H_2, on ZnO, temp. dependence 0=750
- He, on C, in volumetric adsorption apparatus 0=14148
- He in ionization gauge 3=16669
- He, Ne, A, and Kr on clean Pt surface 2=8889
- He, partial, on W in high vacuum 0=18448
- He^3, liquid and solid, spin—lattice relaxation time 4=14492
- He^3, liquid struct. of layer 4=21384
- He^3 on Pyrex, nuclear relaxation 4=7350
- He^3, by zeolite, specific heat, 0.1-1.4°K and nuclear spin orientation 4=14506
- Hg, on Pt films, effect on elec. cond. 1=17612
- at Hg–soln. interfaces 3=1380
- Hg^{201} on quartz, nuclear relaxation in Hg 4=6493
- Hg, by Zn, and diffusion 4=26729
- HgO, ads. of cations, anions, in dilute solns. 3=13608
- I, diffuse reflection spectra 3=13574
- I on graphite, meas. 3=20940
- I ions on Cu at low concns. 1=20685
- I vapour, on containment shells of reactors and atmospheric nuclei 1=11635
- I^{131}, use for meas. surface roughness of metals 3=13556
- InSb surfaces, adsorption characteristics 1=1447
- on Ir, field emission microscope study 2=15099
- O, chemisorption on zinc oxide 2=6693
- O, by Fe, Mo, Ni and work function change 4=19076
- O on Ge 2=23918
- O on Ge, influence on free charge carriers 1=17684
- O, on Ge, kinetics and mechanism 3=3365
- O, on ice, effect on mag. props. 2=16895
- O, by metals, rel. to oxidation 1=2546
- O, on Mb, effect on vacuum ionization gauge meas. 3=21462
- O on Ni, (110) face, O–Ni structures 2=23921
- O and H on Ni (110) face, electron diffraction study 3=1378
- O on silica-supported Fe, i.r. spectrum 2=23963
- O, on W 0=21297
- O on W 2=23919
- O on ZnTe, asymmetries for (111) and $(\bar{1}\bar{1}\bar{1})$ faces 2=7644
- O_2 on β-carotene, effect on photo- and semiconduction 1=6180
- O_2, effect on supercond. of thin Tl films 0=5239
- O_2. on GaSb 1=4078
- O_2, on Ge, effect on Auger electron ejection by He^+ and Ne^+ 1=10737
- O_2, on Ge, effect of water vapour 0=16395
- O_2 on Ge, and surface conductivity 1=8943

Adsorption — contd
- O_2, on Ge and Si, sticking probab., regeneration of clean surfaces 1=11597
- O_2, on metal films 1=1459
- O_2, on Ni, chemisorption mechanism 1=20687
- O_2, on Ni, contact potential variation 0=2303
- O_2, in NiO, effects of neutron irrad. 3=13567
- O_2, photodesorption from ZnO with Zn excess 1=4082
- O_2, photosorption on silica gel 1=4082
- O_2, photosorption on ZnO with O excess, and on silica gel 1=4082
- O_2 on rutile, effect on photo-cond., -volt. props. 4=22800
- O_2, on Si 0=12116
- O_2, on Si, effect on surface elec. props. 1=8948
- O_2 on W 3=6887
- O_2 and water vapour on Ge and Si, effects 4=20795
- O_2, on ZnO, 25–390°C, chemisorption, effect of u.v. irrad 0=8303
- OH, by SiO_2, spectrum and heat vars. 3=8922
- Pd, of H, effect on work function, photoelectric meas. 4=8794
- Pt on alumina, gas adsorption, effect on L_3 X-ray absorpt. edge 4=7152
- Pt of chloride and phosphate anions, with desorpt., multipulse potentiodynamic meas. 4=30890-1
- Pt foil, wire, mechanically and heat treated, ion adsorpt. 2=12950
- Pt and C-supported Pt, ads. of H_2 and O_2 4=26721
- Re, ads. of Cs ion, linear var. of adsorption energy with work function 4=29196
- S, of H_2O, destruction of photoelectrets 4=4219
- S surface, ion trapping, water vapour effect 4=23604
- SO_4 ions on Cu at low concns. 1=20685
- Si crystal, etched, vapour adsorption 4=26722
- Si, ads. of O_2, e.s.r. obs. 4=26723
- Si and Ge, monolayer ads. of O, I, H, P, electron diffraction study 4=20824
- SiO_2, colloidal, on Al_2O_3 4=23684
- SiO_2, surface elec. conductivity 3=25318
- Sn crystals, Ga-coated, resulting mech. props. 0=6313
- Sn, on Fe and Co particles in Hg, effect on mag. props. 2=15614
- $SrSO_4$, of phosphates, effect on cryst. props. 2=10794
- Sr, on W, effect on thermionic emission 2=1478
- T_2, on charcoal, ortho—para conversion 3=12789
- Th atoms on W surface 2=10948
- Th on W, desorption due to electron emission 2=8896
- ThO_2, ads. of SO_4^{2-} ions, in dilute solns. 3=13608
- ThO_2, n. m. r. study 4=26728
- TiO_2, of O_2, temp. var. 4=23612
- UO_2 ion on solid surfs., rel. to luminescence 2=14738
- UO_2, sintered, as cause of resistance anomaly 4=4205
- K beams on surfaces 2=21570
- K–Al alum crystal surfaces, specific adsorption 0=9838
- KCl, on W and Ta, accommodation coefft. 3=5632
- Kr, for Brunauer—Emmett—Teller surface area meas. 3=5145
- Kr, surface area meas. method, using Kr^{85} labelling 1=5246
- Kr, on Al_2O_3, neutron-irrad., surface heterogeneity effects 1=20660
- Kr, on NaBr, statist. mech. study 3=3367
- MgF_2 thin films, formation, adsorption theory 4=29122
- MnO_2, ads. of Zn ions, action of OH groups 4=7701
- MnO_2, of O_2, chemi 4=20823
- Mo, ads. of Cs ion, linear var. of adsorption energy with work function 4=29196
- Mo, adsorption—desorption of H_2 4=23608
- Mo, chemisorption of N_2 4=13694
- Mo, desorption of CO, O^+ by slow electrons 4=23599
- Mo, desorption of F^-, and work function change 4=13691
- Mo films, adsorption of CO and N, 10^{-6}—10^{-8} mm, −195- +22°C 3=16146
- N on alumina 2=17076
- N chemisorption on clean Ni surface 1=6563
- N on graphitized carbon blacks, isotherms 2=10944-5
- N on Ni surfaces 2=8894
- N on W, direct observation of individual adatoms 2=17072
- N on W, effect on work function 2=20011
- N on W, kinetics 2=8917
- N and CO on polycryst. W, interactions 4=23607
- N_2, effect on supercond. of thin thallium films 0=5239
- N_2, on hexagonal BN, multilayers 3=6894

Adsorption—contd

N_2, isotherms meas., rapid flow method 3=11325
N_2 in mass spectrometers, ionization by charge transfer 3=24212
N_2, partial, on W in high vacuum 0=18448
N_2, on Pyrex glass, at low press. 1=12666
N_2 by Ti films 3=23520
N_2, on water and n-hexane, 1=120 atm 3=18795
N_2 from H_2, 76°K, partial press. and effective ads. press. 4=13687
NH_3 on glass, i.r. studies 2=6858
NH_3, influence of solid adsorbent on inversion vibration 4=6582
NH_3, on porous Vycor glass, orientation relax. time and pot. barriers 4=17293
NH_4Cl, ads. of $NiCl_2$, crystal habit change of NH_4Cl 4=29027
NH_4Cl, of $NiCl_2$, and polymorphism, simulation of cast iron 4=23273
NH_3 on Vycor glass, i.r. study 4=20817
Na, liq., by El-437B alloy, effect on deform. 4=23185
NaCl crystal growth, at crystal—solution boundary 4=20736
NaCl glide steps, electron microscope examinations 2=15118
Ne, A, Kr, Xe, H_2, D_2, CH_4, CD_4 on carbon black 3=1377
Ni, ads. of CO and its interaction with O_2 4=20820
Ni, ads. of Cs ion, linear var. of adsorption energy with work function 4=29196
Ni, ads. of O_2, rel. to surface interaction 4=7702
Ni, degassing props. 2=5088
Ni, films, of Ba, effect on resistance and work function 3=13040
Ni films, of CO, var. thickness, temp., from elec. cond. 4=17847
Ni films, of H, and mag. moment 4=4365
Ni films, of N_2, effect on conductivity and work function 4=7727
Ni, foreign atoms rel. to surface reconstruction 2=21558
Ni powder, H^+ and OH^- aqueous ions, ads. isotherms 4=4674
Ni of H, var. with pressure, from mag. susceptibility 4=2128
Ni oxide, of O_2, crystal field effects 3=13573
W, adsorption of Ba and CO 3=18394
W, ads. of BaO, two-phase type 3=23541
W, adsorption of BaO, from work function 3=19297
W, ads. of Cs ion, linear var. of adsorption energy with work function 4=29196
W, ads. of H, detection difficulty in ion microscope 4=613
W, adsorption—desorption of H_2 4=23608
W, ads. of N_2 and CO, sticking coeff., effect of surface coverage and temp. 4=17849
W, ads. of N_2, rel. to surface potential 4=11687
W, ads. of N_2, surface potential 4=29199
W, of K, and desorpt., temp., K flux var. 4=23610
W, chemisorption of N_2 4=4702
W, chemisorption of N_2, study with field emission microscope 4=13695
W, desorption of H_2, O_2, and CO by electrons from field emitter points 4=23609
W, desorption of K, in elec. fld, 77° to 1050°K 4=4675
W filament, chemisorption of O_2, detector using work function prop. of W 4=10683
W, films, of Cs, effect on resistance and work function 3=13040
W, of gases, field emission microscope study 3=13568
W single crystals grown for adsorption studies 2=21485
W surface, rel. to electron bombardment 3=18395
W, surface structure rel. to N_2, CO interaction 1=20742
W, thermal desorption of Ne, Ar, Kr, Xe 4=13693
Xe on graphite 2=6856
Xe in high density graphite, high temp. 2=6855
Xe on metals, use for surface meas. 2=15092
Xe on W and Ni, in sintering studies 2=10946
ZnO, ads. of O_2 4=10623
ZnO, effect of γ-rays on charge transfer 2=12949
ZnO, luminescence quenching by adsorbed vapours 2=16852
ZnO, photocond. decay, chemisorpt. model 2=2193
ZnO—Au, ads. of methyl free-radical, rel. to contact potential 4=6992
ZnS—CdS:Cu, of H, and luminescence change 4=7193
Zr, of Br^- and SO_4^{2-}, Zr surface treatment effects 4=13696
Zr, of phosphate ions, P^{32} tracer meas. 4=4677

He^3, singly ionized, table of energy rel. to mag. field strength and orbital radius 4=25212
He^3, 29 MeV, scatt. by Au, polarization 3=24976
He^3—α scattering, elastic, 1-50 MeV, optical potential 4=21966
He^3, from D(d, n)He^3, use in time-of-flight meas. 4=16980
He^3 + d(6-10 MeV), p spectrum, and He^4 excited state 4=15112
He^3—e scatt., elastic, form factor analysis 3=24695
He^3 + γ → p + d. 8.5-22 MeV. 90° differential cross-sections 3=19716
He^3(γ, p)d, 10-30 MeV, peaks 4=15113
He^3(γ, p)D^2, He^3(γ, n)2p, γ energy var. 4=27915
He^2, by He^3(d, t), half life meas. 4=9320
He^3—He^3 scattering, elastic, 3 - 12 MeV 3=12521
He^3 + μ^- → H^3 + ν, reaction rate, final results 3=7881
He^3(ν, p)D, 35 MeV 4=6147
He^3—p elastic scatt., 4.5 to 11.5 MeV 4=12004
He^3—He^4, elastic, scatt., 2. 5 to 5. 7 MeV 4=12082
He^3—He^4 scatt., rel. to Be^7 excited states 3=12522
He^4—He^3 scatt., spectator exchange terms 3=15051
He^4 excitation, by p at 55 MeV 4=16981
He^4 levels 4=19611
He^{4,5}, lifetime 3=15088
He^4—p elastic scatt., 2-11 MeV 4=12001
He^4, T = 0 state, theory, one-body model 4=9318
$_\Lambda$He^4, lifetime, from emulsion decays 3=10233
$_\Lambda$He^4 → π^+ + H^3 + n 3=7976
He^5 states, from He^4 + n, 20-29 MeV 3=15099
$_\Lambda$He^5, lifetime, from emulsion decays 3=10233
$_\Lambda$He^5, non-mesonic decay 3=6146
He^6, β-decay 3=10182-3
He^8 casts doubts on stability of H^5, H^4, n^4 4=19611
from N^{14}(d,α)C^{12}, angular distrib. 1=13849
from Sm, energies 1=13703
T(d, n)He^4, 1 to 3 MeV, 4=30278

  - C^{12}, angle distrib. 4=28011
  - C^{12} inelastic scatt. 2=22850
  - C^{12}, elastic, at 2.5 to 4.8 MeV 2=20673
  - C^{12}, inelastic, from 4.43 MeV level, $\alpha-\gamma$ ang. correl., rel. to distorted-wave theory 2=22850
  - C^{12}, inelastic, 6-19 MeV, γ-rays analysis 4=12279
  - C^{12}, 9.6 MeV 3^- level excitation, correl. between α, α' 4=3562
  - C^{12}, elastic, 10-19 MeV, data analysis 4=12278
  - C^{12}, inelastic, at 15 to 19 MeV, 4.43 MeV γ-ray 2=3614
  - C^{12}, 15 to 22.7 MeV, backward 3=2494
  - C^{12}, 15 to 42 MeV 3=17496
  - C^{12}, at 18 MeV 0=2668
  - C^{12}, elastic, large-angle, at 18.7 MeV 2=3613
  - C^{12}, elastic and inelastic, 20-23 MeV, energy depend. meas. 4=25435
  - C^{12}, elastic and inelastic, at 27-35.5 MeV, ang. distrib. 1=8771
  - C^{12}, at 38 MeV 0=20468
  - C^{12}, at 38 MeV, elastic and inelastic 0=7582
  - C^{12}, at 915 MeV, quasi-elastic $\alpha-\alpha$ scatt., evidence for α-clustering 1=12222
  - $C^{12}(\alpha,\alpha')C^{12}$, angular distrib. 1=13852
  - $C^{12}(\alpha,\alpha)C^{12}$, Regge poles contrib. to resonances 4=17109
  - $C^{12}(\alpha,\alpha'\gamma)$, rel. to nuclear polarization ang. correl. 4=28062
  - C^{12}, O^{16}, Si^{28}, 6 to 19 MeV 4=22180
  - Ca^{40}, inelastic 2=22851
  - $Ca^{40}(\alpha,\alpha'\gamma)$ 2=20510
  - on Ca^{40}, 44 MeV particles 1=7402
  - Cd^{111}, 15-40 MeV, excitation functions 1=688
  - Cu isotopes, inelastic, at 43 MeV 2=1923
  - $Cu^{63,65}$, 4-8 MeV, Coulomb excit. 4=17055
  - $Cu^{63,65}$, elastic, 12 MeV ang. distrib. 4=19772
  - $Cu^{63,65}$, 44 MeV, inelastic, ang. distrib., core—particle interact. 4=17194
  - F, at 38 MeV, ang. distrib. 0=7583
  - F^{19}, elastic, nuclear surface study 2=3621
  - F^{19} scatt. of He^3 at 29 MeV 2=5965
  - Fe isotopes, inelastic, at 43 MeV 2=1923
  - Fe^{54}, elastic, 12 MeV ang. distrib. 4=19772
  - Fe^{56}, elastic, ang. distrib. 2=18359
  - Fe^{56}, inelastic 1=9883
  - $Fe^{56,52}$, excitation of collective "2-phonon" levels, 44 Mev 3=24864
  - Fe^{57} excitation, 14.4 keV level E2 meas. from γ spectra 4=25307
  - Fe^{58}, elastic and inelast., 64.3 MeV meas. 4=15237
  - $Ge^{74,76}$, inelastic 2=10141
  - He 0=1422
  - He—α collisions, two-electron exchange 4=9633
  - He, phase shift analysis 2=5751
  - and He^3, elastic scatt. by nuclei, optical model anal. 4=30354
  - He^3, elastic scattering by Al, V and Cu at 29 MeV 1=8774
  - He^3, elastic scattering by C, Mg, Al and Cu 1=5796
  - He^3, elastic, at 29 MeV, optical model analysis 1=19524
  - He^3—p, elastic, 4.5 to 11.5 MeV 4=12004
  - He^3 polarization on C^{12} 2=3611
  - He^3, resonating-group struct. in one-channel approx. 3=24811
  - He^3, scattering by Cl, Kr and Xe 1=12216
  - He^3—Ar elastic, 24-29 MeV 4=12277
  - He^3—C, elastic, 24-29 MeV 4=12277
  - He^3 by CCl_4 1=17150
  - He^3 by CCl_4 at 29 MeV 2=3612
  - He^3, by C, F, S, Br nuclei, elastic, 29 MeV, optical model analysis 3=2493
  - He^3—He^4, differential cross-sections rel. to bombarding energy 1=13531
  - He^3—He^4, elastic, 2.5 to 5.7 MeV 4=12082
  - $n + He^3 \rightarrow He^4$, momentum dependence of vertex 1=12114
  - He^3—I elastic, 24-29 MeV 4=12277
  - He^3—N, elastic, 24-29 MeV 4=12277
  - He^3, by N^{14} and O^{16}, elastic, inelastic, optical model analysis 3=2492

Alpha-rays—contd
- **scattering**—contd
  - on He^4, elastic, 3.8-12 MeV 3=10386
  - He^4, elastic, 6.4-7.8 MeV, ang. distrib. 1=2107
  - He^4, at 915 MeV, rel. to $C^{12}(\alpha,2\alpha)$ 1=12222
  - He^4—He^3, spectator exchange terms 3=15051
  - He^4—p, elastic, 2—11 MeV 4=12001
  - He^4—p, polarization at 38 MeV 2=20337
  - p—He^4, and potential, 40 MeV 3=22256
  - p—He^4, 22-48 MeV, p polarization 3=22131
  - p—He^4, 38.4 MeV, p polarization, phase-shift analysis 3=22132
  - by I^{127} 1=2239
  - In^{115}, 15-40 MeV, excitation functions 1=688
  - In^{115}, inelastic, at 20 to 40 MeV, recoil ranges 2=22811
  - K^+-mesons, elastic, calc. for various energies 0=7447
  - Kr, at 38 MeV, ang. distrib. 0=7583
  - Li, elastic, study of B^{10} states 2=18252
  - Li^6, ang. distrib., 23.8 MeV 4=17193
  - Li^7, 13.2 MeV, excitation 4=3703
  - $Li^7(\alpha,\alpha')Li^7$, angular distrib. 0=11426
  - $Li^7(\alpha,\alpha')Li^7$, at 13.2 MeV 0=9644
  - Mg, elastic and inelastic, rel. to nuclear deformation 1=8679
  - Mg (elastic) and Mg^{24} (inelastic) 0=17608
  - Mg, 13-30 MeV, differential cross-sections 3=17497
  - Mg^{24}, effect of boundary smearing-out 2=20578
  - Mg^{24}, elastic, 3.2-4.5 MeV meas. 4=9399
  - Mg^{24}, excitation of unnatural parity level 4=28063
  - Mg^{24}, fourth excited state, 22.5 MeV 3=15229
  - Mg^{24}, inelastic, at 43 MeV, Fraunhofer theory and DWB approx. 1=8670
  - $Mg^{24}(\alpha,\alpha'\gamma)$, rel. to nuclear polarization ang. correl. 4=28062
  - Mn^{55} and Ho^{165}, 43 Mev, elastic 3=19828
  - N, at 38 MeV, ang. distrib. 0=7583
  - α—N interact., separable potl. model 3=2332
  - N^{14}, elastic and inelastic, at 19.2 MeV, abs. diff. cross-sections 1=8775
  - N^{14}, elastic, at 1 to 2.4 MeV diff. cross-sections 2=493
  - N^{14}, 15 to 22.7 MeV, backward 3=2494
  - N^{15}, elastic, at 1.75-5.5 MeV, cross-sections, levels in F^{19} 1=7404
  - Ne^{20}, excitation of unnatural parity level 4=28063
  - Ni isotopes, inelastic, at 43 MeV 2=1923
  - Ni, and optical model calc. 1=13759
  - Ni region, inelastic, at 43 MeV 2=1924
  - Ni^{58}, elastic and inelastic, at 43 MeV 2=12218
  - Ni^{58}, elastic and inelast., 64.3 MeV meas. 4=15237
  - Ni^{58}, inelastic 1=9883
  - $Ni^{58,60}$, spin and parity meas., anomalous inelastic states 0=2620
  - Ni^{58-64}, elastic, 12 MeV ang. distrib. 4=19772
  - $Ni^{58,60,64}$, inelastic, nuclear excitation 1=13853
  - Ni^{60}, elastic and inelastic, at 43 MeV 2=12218
  - Ni^{60}, two-phonon state excitation, at 43 MeV 4=6214
  - $Ni^{62,64}$, excitation of collective "2-phonon" levels, 44 MeV 3=24864
  - $Ni^{62,64}$, 44 MeV, inelastic, ang. distrib., core—particle interact. 4=17194
  - O, 13-30 MeV, differential cross-sections 3=17497
  - O, at 38 MeV, ang. distrib. 0=7583
  - O^{16}, at 18 MeV 0=2668
  - O^{16}, elastic, nuclear surface study 2=3621
  - O^{16}, elastic, at 3.7-6.5 MeV, states in Ne^{20} 0=9645
  - O^{16}, excitation of unnatural parity level 4=28063
  - O^{16}, 15 to 22.7 MeV, backward 3=2494
  - $O^{16}(\alpha,\alpha'\gamma)O^{16}$, 8.9 to 9.9 MeV 4=22187
  - $O^{16}(\alpha,\alpha')O^{16}$, inelastic, 65 MeV, rel. to levels 4=17201
  - O^{16}, of He^3, 29 MeV, emulsion study 4=9562
  - O^{18}, elastic, 2.4-3.5 MeV meas. 4=22181
  - P^{31}, elastic and inelastic, 18.2 MeV meas. analysis 4=22182
  - Pb^{208}, elastic, nuclear surface study 2=3621
  - Rh, elastic, at 43 MeV, diff. cross-sections 0=5759
  - $Rh^{103}(\alpha,\alpha')$, 20 MeV 4=22190
  - S^{32}, at 18 MeV 0=2668
  - $Se^{76,78,80}$, inelastic 2=10141
  - Si^{28}, excitation of unnatural parity level 4=28063
  - Si^{28}, fourth excited state, 22.5 MeV 3=15229
  - Sm^{152}, inelastic, at $\sim$4 MeV, comp. with Coulomb excitation theory 1=2208
  - Sn^{116}, inelastic 2=1823
  - Tb^{159}, elastic, nuclear surface study 2=3621

Alpha-rays—contd

damage by electron-irrad., low temp. 3=22860
Debye temp., calc. 2=3843
Debye temp., temp. depend., X-ray method 0=20747
Debye—Waller factor for electron diffr. 3=22656
Debye—Waller factor, 4° to 500° K 3=20082
decanting of Fe-doped crystals 4=29040
defect clusters due to ion bombard. 2=18565
defect structure rel. to quench deformation 3=6515
defect structures and H distrib., autoradiography 4=2106
defect structures rel. to n-irrad. 3=17735
defects, effect on corrosion 3=6919
defects, internal friction study 0=1582
defects when quenched and aged 3=10667
deformation bands, X-ray microbeam study 0=6393
deformation rel. to integrated X-ray intensity 1=20348
deformation, 1.7-473°K 0=1851
deformation, oriented, mechanism 2=21524
deformation resistance 1=20347
deformation resist., effect of strain rate and temp. 4=28931
deformation of single crystals at high temps. 1=14905
deformation striations, etching, electron microscope exam. 3=23534
deformation texture and recrystallization kinetics, new study method 4=13641
de Haas—van Alphen effect, 35 kG 3=20559
density change during thermal changes 2=10772
deuteron irrad., low-temp., annealing 3=13021
deuteron range meas., 5-27 keV 4=1540
diffusion in Al_2O_3 2=21056
diffusion of Al^{26} and Mn^{54}, 450°–650°C 2=12448
diffusion of Cr, 250-605° C 4=22610
diffusion of d, by $d + d \rightarrow He^3 + n$ 3=17352
diffusion, on Fe—Al alloys, in d.c. field 1=15163
diffusion of Fe, Ni, Co, dislocation short-circuiting models 4=1506
diffusion in liquid tin 1=141
diffusion of uranium 0=13563
diffusion of Zn, effect of fatigue 1=19807
dislocation arrangements in crystals deformed by tension or fatigue 0=21118
dislocation arrangements due to tensile stresses 3=20754
dislocation damping, exptl. check for qualitative model 2=10395
dislocation damping, neutron irrad. effects 3=4868
dislocation debris when fatigued at 78°K 4=12751
dislocation density 2=2083
dislocation density, after deformation 1=11206
dislocation density, in strain, from microhardness data 1=11209
dislocation-free crystals 1=12383
dislocation loop growth on irrad. with fission fragments 3=6520
dislocation loop production by combined climb and glide mechanism 1=2389
dislocation loops, annealing 1=19777
dislocation loops, formation of 4=4048
dislocation loops, new type, when quenched 4=6840
dislocation loops, prismatic, annealing, dislocation climb 0=20806
dislocation loops, quenched-in, electron microscope study 0=20810
dislocation loops, quenched, stability 3=4878

Aluminium—contd
dislocation mobility after neutron irrad. 2=3974
dislocation movement, cooperative 1=10005
dislocation pinning and internal friction at low temp. 2=21017
dislocation relax., 10-50 Mc/s meas. analysis 4=12754
dislocation structure during cyclic strain 3=17749
dislocation tangles in easy glide range 2=12436
dislocation theory rel. to finite ampd. wave propagation 1=14266
dislocations, diffusion activation energy 1=967
dislocations, edge, fast moving 2=12433
dislocations, formed vacancy disk collapse 0=20814
dislocations, interstitial loops 3=4870
dislocations, interaction between imperfect loops and moving dislocations 4=12757
dislocations, interaction with oxide film 1=965
dislocations in monocrystals, rel. to growth cond. 1=19780
dislocations, new etching method 3=4876
dislocations observed by X-ray diffraction 0=20804
dislocations prod. by spark discharge 3=12969
dislocations during recrystallization 1=11210
dislocations, X-ray diffrac. topography 0=1587
disorientation investig. by X-ray scatt. 2=15110, 19125
divacancy binding and migr. energies 4=15468
effect of annealing on dislocations 1=14273
effect of atmosphere corrosion on fatigue 0=702
effect on CdS luminescence 1=1177
effect on crystallization of Fe 0=3173
effect on tensile props. of α-U, –183° to 350°C 4=28987
effect of vacancy condensation on subgrain boundaries 1=959
effective charge, in NiAl 2=8839
elastic const. recovery after plastic deform., dislocation effects 4=20651
elastic constants, adiabatic, at 300°, 77° and 4°K 4=23117
elastic constants, 4.2-300°K 4=13390
elastic constants, pressure depend., up to 10^4 kg/cm^2 2=23733-4
elastic modulus, effect of quenched-in vacancies 0=16202
elastic and plastic props., temp. and deformation-rate depend. 0=1931-2
elastic relaxation, second dislocation peak at low temp. 1=3964
elastic scatt. of O^{16} ions 3=19891
elastic wave dispersion and attenuation in rod 1=16002
elec. cond., effect of cold working 1=6123
elec. conduction mechanism and optical constants 0=6077
elec. conductivity, bulk state, 14°–20.4°K 2=18630
electrical conductivity, effect of surface enriched with Cr, Ti or Si 4=28535
elec. conductivity, 2.2°–22°K meas. 2=16674
elec. resistance, 4.2°-1.65° K, rel. to sample size 3=2851
elec. resistance in magnetic fields up to 27 kOe, 4.2° and 20.4°K 4=28528
electrical resistance rel. to plastic stretching 1=11252
electrical resistance, rel. to vacancies, dislocations and stacking faults 3=22891
electrical resistivity of dislocations, expt. determ. 4=6848
electrical resistivity meas. of dislocations 4=6842
electrical resistivity, recovery, 60° to 200°K, rel. to cold-working in liq. H_2 4=12850
elec. resistance, 20°-58° K 3=2852
electrode in electrolytic bath, radiation spectrum 3=1395
electron absorption, ionization energy loss 2=14423
electron backscatt. coeff., 8-22 MeV 4=22122
electron beam energy losses rel. to diffraction patterns 3=2779
electron beam penetration 0=19765-7
electron beam penetration 1=6098
electron beam, 2·8 MeV, energy loss, theory and expt. 1=18935
electron beams, energy dissipation, fair agreement for medium penetration 4=6817
electron beams, energy loss, ang. depend. 2=20984
electron beams, energy rel. to atomic displacements 2=12476
electron bombarded, characteristic energy loss 2=10365
electron concn., free 4=9891

Aluminium—contd
electron concn., free, and free mean path 2=20979
electron diffraction intensities, rel. to grain size 1=15053
electron diffraction intensities and structure amplitudes rel., and its appl. in structure analysis 4=10521
electron diffraction rings, intensities rel. to wavelength 2=2378
electron effective masses rel. to de Haas—van Alphen effect 3=22693
electron emission from abraded surfaces, temp. depend. 1=5489
electron emission due to Ar$^+$ bombardment 3=9843
electron emission charac. in gases 3=418
electron emission, exo, photo-stimulated, stretched foil 3=7627
electron emission, photostimulated, on reaction with NaOH or KOH 1=16376
electron emission, under plastic deformation 0=1143
electron emission by proton bombard. at 1 MeV 2=1495
electron emission, secondary, due to γ-irrad. 1=13120
electron emission, secondary, rel. to electron energy dissipation near surface 1=3005
electron emission, secondary, by relativ. primaries 3=16979
electron energy loss, ang. distrib., 15 eV 2=2074
electron energy loss by bremsstrahlung at 1 MeV 3=17699
electron energy-loss line shape 4=28437
electron energy loss in, by scatt. through 90° 0=274
electron energy loss spectrum, effect of surface oxidation 0=9880
electron energy loss, 20-60 MeV 4=28438
electron energy losses due to surface plasma oscill. 4=9937
electron group, basic, effective masses anisotropy meas. 4=4007
electron irrad. effects, recovery study 3=15489
electron microcharacteristics meas., by optical constants 3=15467
electron penetration, energy partition 0=15083
electron-probe microanalysis 3=11366
electron range—energy relation, for low to medium energies 1=7100
electron range, kilovolt, meas. interpretation 2=12409
electron scattering, energy loss 3=2040
electron scatt. by films, background intensity 3=4202
electron scattering by foils, elastic and inelastic 1=16425
electron scatt., multiple, 20 keV, meas. and theory 2=10366
electron scattering, at small angles, 500 keV 1=329
electron scatt. at surface, energy losses 3=4858
electron scatt., unsymm. ang. distrib. for charact. surface losses 4=28429
electron transmission, 100-472 keV 3=14961
electronic structure variation by irradiation 0=1621
electrons, free, mean path and number 2=16620
electrophoretic deposition and fusion to substrate 4=7789
electropolishing and growth of oxide spirals 3=1261
energy bands, Green's function calc. 2=2061
epitaxial growth on NaCl cleaved in vac. 4=29070
equations of state at high pressure 0=11549-50
etch pit development 1=14958
etch pits along grain boundaries in aged Al 1=2520
etching, cubic and octahedral etch pits 1=1365
etching by ion bombardment, electron micr. study 3=18241
evaporated layer, electron diffraction 1=16421
evaporation source for vacuum deposition 0=19240
evap. in u.h. vac., i.r. reflectance 3=20443
evap. from W wire 2=22093
exo- and photoemission of electrons 1=16374
exo-electron emission of abraded samples 1=16356
exo-electron emission and electroluminescence, during anodic oxidation 0=9065
exo-electron emission and optical props. 0=9075
exo-electron emission, photostimulation 0=10937
exo-electron emission on plastic deformation 1=12590
exo-electron emission, rel. to plastic deformation 2=5367
exo-electron emission, u.v. induced 2=7638
exo-emission from abraded etched surface 4=19077
exoemission from abraded surface 1=13098
exploding wire, hollow, X-ray emissions meas. 4=16177
f.c.c. point defects by work hardening 1=17523
fast neutron scattering, dose albedo 0=12944
fatigue damage and crack formation, intermediate annealing 0=21120

Aluminium—contd
fatigue fracture, autoradiography 2=19015
fatigue fracture, crack propag. 2=23789
fatigue fracture, crack propag., mechanism 2=12868
fatigue and hardening, rel. to point-defect motion 0=21121
fatigue investigation 3=18213
fatigue life, effect of air pressure 1=6482
fatigue, low-temp., and cross-slip 2=6756
fatigue, surface deformation 0=11976
fatigue, tension—compression, stress—strain relns. 3=11139
fatigue, torsional, dislocation processes 3=25609
fatigued, substructure and fracture process 3=20742
Fermi surface 0=2805
Fermi surface 3=20133
Fermi surface 4=12697
Fermi surface, effect of electron interactions 1=17454
Fermi surface, from de Haas—van Alphen effect 3=1121
Fermi surface investig. by high-freq. surf. resistance quantum oscills. 4=12698
Fermi surface, magnetoacoustic meas. 3=17682
Fermi surface magnetoacoustic studies 4=30547
Fermi surface shape from de Haas—van Alphen data 4=6792
Fermi surface, theory 3=17683
field emission electron polarization 2=5368
film on Ag, Pd, Ni, structure 3=1371
film and block, scatt. region misalignment comparison 4=20802
film, X-ray refl., rel. to substrate 4=26708
films, adhesion to glass 0=8145
films, adsorption and oxide formation 0=8335
films, for Al/ZnS/Al sandwiches 0=16007
films, on amorphous support, microstructure examination 2=19501
films, characteristic electron-energy losses 3=5712
films, critical thickness for elec. conductivity 0=6389
films, crystal structure, electron diffr. study 2=10820
films, elastic deform., electron diffr. exam. 4=1928
films, electron concn. from u.v. transmission 2=14657
films, electron diffraction study 1=20665
films, electron diffraction, thickness depend. 1=16423
films, electron scatt. at $<$ 10 keV, transmission, ang. distrib. and energy spectrum 1=1922
films evap. from W heaters, W content meas. 3=1364
films, evaporated, elec. cond. and Hall const. 3=8494
films, fission fragment damage observation 2=10426
films, fission-fragment track visualization 2=23227
films, i.r. reflectance 2=23537
films, layer formation, oxidation, reflectivity 2=12944
films, light, absorption, refractive index, 4000-14 000 A 4=7093
films, melting point, rel. to thickness 4=8499
films, oblique reflectance and transmittance 1=6204
films, optical constants 1=19087
films, optical consts. at less than crit. wavelength 4=22844
films, optical props., 0.4-1.2μ 2=23538
films, optical scatt. 2=13455
films, oriented, growth on alkali halide substrates 3=18254
films, oxidation thickness change rel. to transmission and resistance 4=20801
films, plasmon excitation, 30 kV electron differential cross-sect. meas. 2=23127
films, preparation, optical properties, 2537-5460 A 1=236
films, reflectance increasing 0=8797
films, reflectance and transmittance 1=11836
films, reflectivity, decrease due to oxidation 3=23039
films, single-crystal, electron diffr. streak patterns 2=23939
films, substructure analysis 2=23937
films, substructure, electron diffrac. study 2=23936
films, supercond. pulse-destroyed 4=21412
films, superconductivity 3=14447
films superconductivity and normal cond. rel. to adsorbed O 3=16872
films, thin, cooled layers, elec. cond. and Hall const. 3=4906
films, transmission of medium-energy electrons 2=2075
films, transmission of slow electrons 1=7102
films, transmitted electron energy spectrum 4=9935
films, transverse electric field effects 3=15541
films, vacuum u.v. reflectance 3=11883

Aluminium—contd
films, X-ray reflection, 1.54 A, 500-3000 A thick 3=23093
films, X-ray study of second type stresses 1=1451
films, ZnS and cryolite coated, spectral refl. curves 4=24377
filter, optical, films, for 600-1250 A 4=21290
flakes, suspended in gas, orientation by electric field 0=10360
flexural Rayleigh waves in plates 1=2808
flying plate, attenuation of shock wave produced in Al target 0=8742
foil, cavitation by u.s. waves 4=11311
foil, secondary electron emission, energy distrib. 0=5342
foil, 60μ thick, quenched, dislocation loops with stacking fault 3=2804
foils, β back-scattering and transmission 0=2528
foils, cylindrical, collapsing, z-pinch production 4=18351
foils, electron-bombarded, plasma radiation detection 4=17407
foils, optical emission due to charged particles 2=14751
foils, rare gas loading and evolution 1=17551
foils, secondary electron emission, beam monitors 4=8827
fractional forces–deformation relationship 0=4571
fracture, creep, obs. by electron microscope 3=8782
fracture, ductile 4=23123
fracture, ductile, crack initiation 2=23785
fracture mechanism 0=21144
fracture tearing of sheets, and crack toughness 4=20642
fusion curve, at high press. 3=6814
γ-ray absorption 1=7226
γ-ray absorption efficiency, effect of multiple scatt. 4=9157
γ-ray absorption, 13-80 MeV 0=7328
γ-ray backscattering 1=10869
γ-ray scatt., elastic meas. ~1 MeV 2=11920
γ-ray scatt., source in contact with Al 2=1676
in glasses, structure 4=10627
glide, secondary, near grain boundaries 3=5069
glide, thermally activated, and strain hardening 0=21114
grain boundaries, stress behaviour 3=18177
grain refinement by transition metal additives 4=23241
graticule production evaporation technique 2=2871
growth of crystals of known orientation from melt 0=13948
Grüneisen γ, temp. depend. calc. 3=10607
Hall effect, high-field, at 4·2°K 3=840
Hall effect and magnetoresistance 0=9945
hardened and annealed, shock wave compression, equations of state 1=11167
hardening, recognition criteria, temp. depend. 3=3230
hardness relax. after cold deformation 3=11187
heat of solution in Sn at 750°K, and theories 4=24175
heat of wetting, by hydrocarbons, in solution 3=16131
helicon oscillations det. 3=10728
helicon oscillations in 7200 Oe 2=18513
high purity, low temp. transport props. 0=7857
impact of radioactive projectiles 3=25646
imperfections, etching obs. 3=20202
imperfections in very pure metal, quenching and elec. cond. to 4.2°K 1=17510
impurities analysis by γ-ray spectroscopy 2=6899
impurity distribution, nonuniform, in cross-section of single crystals 4=9949
impurity ions in Al, scattering cross-sections and charges 3=17813
impurity nucleus, dynamics and γ-ray cross-section 3=20063
impurity in Si, energy levels, pressure effects 2=23353
indentation tests 2=14882
inert gas ionization at 2000°K, seeding effect 4=27472
initial deformation single crystal plates, study 0=3209
inner potential from X-ray K absorption spectra 1=12350
interdiffusion with Zr 4=28478
internal friction 2=14872
internal friction, anelasticity produced by plastic deformation, 4.2-300°K 0=10258
internal friction, cold-worked metal 2=21407
internal friction, effect of heat treatment and plastic deformation 0=1849
internal friction, effects of pressure cycles 2=18985
internal friction at grain boundaries 1=1301
internal friction, meas., 20-400 kc. 1=20310
internal friction, recovery, after load removal 1=7815
internal friction, recovery after plastic deformation 0=8111

Aluminium—contd
internal friction rel. to strain amplitude 3=11138
internal friction, temp. depend. 0=1847
internal friction, temp. depend., effect of cold working 1=6445
internal friction, time-dependent 0=4558
internal friction, var. with quenching temp. 3=15976
internal friction, Young's modulus meas. 3=11135
interstellar, detection 0=12250
ion bombardment, absorpt. range for 50–500 keV 2=9645
ion bombardment at oblique incidence, etch effects 1=4672
ions, Al^-, formation in electron interaction with $AlCl_3$ 4=18674
ions, Al^-, lowest config., Hartree–Fock calc. 4=12377
ions, deuterium, introdn. into metal 2=13606
ions, mobility in metal, effective charges 2=18609
ions, polyatomic, up to Al^+_{14}, rel. abundances 2=9533
ions, range in solids and gases 2=7674
ions (Z = 2 to 13), range 2=7674
irradiated, thermal diffusivity meas. 1=17430
irradiation hardening due to electrons 4=28929
Kα and Kβ lines, satellites, systematics 4=13018
$K\beta_x$ emission lines, analysis, in solid and liq. Al 4=13017
K-shell fluorescent yield 0=15651
K-shell X-rays due to 60-500 keV protons 4=13046
Lamb wave propagation 1=10559
latent hardening and secondary slip 4=30766
lattice const. and density, precision 1=1677-8
lattice constants, precise values 2=15014
lattice defects after plastic deformation 3=20195
lattice dynamics by axially symm. model 3=2711
lattice parameter, effect of small amounts of Au 4=29091
lattice parameter measurement 1=11553
lattice parameters, X-ray study, absorption correction 0=1919
lattice vibr. and Debye temps. calc. 4=6706
lattice vibration spectrum, effect on intrinsic elec. and thermal resistivity 0=1554
layers, optical consts., 0.4-2 μ region, rel. to quantum absorption 4=20447
lifetime, under load 0=16223
liquid, alloying with and penetration into Si 2=12539
liquid, in Be, above 650°C, as impurity dissolver 2=8210
liquid, exo-electron emission due to O_2 and O_2–N_2 gases 0=15049
liquid flow, activation energy jumps and cluster formation 4=5137
liquid, fluidity and prefreezing cluster formation 3=9437
liquid, rate of soln. of transition elements 3=16614
liq. and solid, thermal expan. 0=9893
liquid, structure, X-ray study, 670–820°C 2=2704
liquid, surface tension, effect of 0.12 Na 4=14152
liquid, viscosity 2=15542
liquid, X-ray L_{23} emission spectrum 3=16628
loop movement, rel. to fission fragment irrad. 3=17803
Lorenz number at low temp. 4=6919
luminescence, on electrolysis, near anode and cathode, flash spectra 3=10984
luminescence, under electrolytic oxidation 3=10983
luminescence spectrum, u.v., on K^+, H ion bombardment 4=22913
mag. susceptibility, effect of Mn, Cr and V 0=16124
mag. susceptibility, 67°-293°K 0=16125
magnetoacoustic oscillations and the Fermi surface 0=15810
magnetoacoustic oscill. and Fermi surface 3=22685
magnetoacoustic resonance at 4.2°K 2=8162
magnetoacoustic resonance at 4·2°K 3=6469
magnetoelectric effects, anisotropy in strong fields 3=22903
magneto-optical polarized light reflection rotation 4=28667
magnetoresistance, dimensional and purity effects at low temp. 3=15554
magnetoresistance, effect of correlations between carriers, calc. 0=568
magnetoresistance, 4° to 30°K 4=12851
magnetoresistance, Kohler's law, deviations 4=4115
magnetoresistance and Sondheimer oscillations 3=4908
magnetoresistance, transverse, low-temp, up to 20 kG
mass stopping power to α-rays 0=19039
mech. props. below 4.2°K, effect of preliminary plastic deformation 0=21122

Aluminium—contd
mech. props. at room and low temp. 0=13915
mechanical props., effect of electron irrad. 4=15701
mechanical props. at liquid helium temps. 0=6293
mechanical strength calc. from shock wave attenuation and thickness of surface scale produced 4=4456
mechanical strength, tensile, time var., low temp., anomalous 3=20729
mechanical strength, torsion, and tensile strength—endurance relation 3=18208
mechanically unstable solid, expt. data 4=1926
melt-grown, single crystals, influence of mosaic structure on creep 4=7405
melting point, pressure depend. 1=6686
mesic atom, μ^--meson capture rate 1=17300
metal-water reaction temp. 4=4540
microdeformations, verification of linear elasticity theory 3=20684
microhardness rel. to applied load 4=17743
microstresses due to plastic deformation 0=10263
mirror reflectivity variation by Si—TiO_2 coating 1=9472
mirrors, Al—dielec., for interferometers 3=3889
mirrors, decreased reflection after evap., 1150A 1=2863
mirrors, polarization effects 0=178
misorientation of subgrains formed during creep 1=1323
molecule, Al_2, rotational analysis of band spectrum 4=9699
molten, surface tension and density meas. 2=19532
molten, viscous flow, activation energy increase 4=155
monocrystal, atomic ejection sequences by Ar^+ ion bombardment, 50 keV 3=2845
monocrystalline, channelling of heavy Na^{24}, Kr^{85}, Rb^{86}, Xe^{133} ions 4=22642
mosaic block disorientation meas. 3=10682
n.m.r. 3=21997
n.m.r. of Al^{27}, analysis by lattice harmonics 3=5047
n.m.r. and dislocations in cold-rolled metal 2=6349
n.m.r., effect of Zn, Ge impurities 4=4424
n.m.r., elec. cond., normal and supercond. 4=20608

props., pressure depend. 0=13495
proton bombarded, 143 MeV, neutrons emitted at 0° 2=7987
proton prod. by H_2^+ ion impact 4=28270
proton range in, at 1-20 MeV, calc. 0=15354
pure, resistivity restoration by neutron irrad. at 77°K 4=26002
pure, room temp. electron emission 0=5330
purification and analysis 0=2065
purity determination, residual resistivity method 4=12852
quench hardening, single crystals 0=4570
quenched from liq. state, defects 4=9942
quenched, void and dislocation loop form. 4=22559
quenching, vacancy generation and fall of elec. resistivity 1=6105
radioactivity decay, semiclassical approx. 3=22319
range of Be^9 ions in, at 2-21 MeV 3=2048
range of Cs^{137}, Rb^{86} and Na^{24} ions in BeV energies 0=19804
range of heavy ions in 1=337
range of Na^{24} nuclear recoils in, from $Al^{27}(n, \alpha)Na^{24}$ 4=6355
range of 1-3 MeV Ne^{22} and Na^{24} 3=4640
range straggling of charged particles in, calc. 0=5560
recoilless Rayleigh scattering in, using Mössbauer effect 0=11560
recovery after cold-working at 78°K 4=4037
recovery from cold working, u.s. study 2=23773
recovery of creep-resistant substructures 4=23122
recovery after neutron irrad. at 78°K 4=4091
recovery, stage I, of neutron-irrad., rel. to quenched-in vacancies 4=4097
recovery from strain-hardening 2=23771
recrystallization and grain-boundary motion, effect of He 3=11222
recrystallization of ground powder, X-ray meas. 4=10575
recrystallization inhibition by polygonized struct. prod. 4=23326
recrystallization nuclei formation process 4=13474
recrystallization of plastically deformed foil 1=9164
recrystallization, subgrain rotation 2=23828
recrystallization, zone refined, Cu, Mg additions 2=4391
refl. coeff., rel. to refr. index and absorpt. coeff., 23.6-113 A 4=22846
reflectivity of gratings below 1000Å 2=116
refractive index meas. from 300 A to critical wavelength, extinction coeff. calc. 4=13019
resid. elect. resist. due to impurity charges 2=6402
residual electrical resistivity, size effect 3=22890
resistance to deformation, time-dependence 1=1337
resistivity of dislocations 2=23230
resistivity, 14-655°C, rel. to vacancy conc. 0=4315
rolling deformation and recrystallization 1=14881
S.A.P., activation energy and volume 4=20643
secondary electron emission, and inelastic electron 2=1492
secondary electron emission, 1 MeV proton bombardment 3=24344
secondary electron emission, under relativistic electron bombard. 0=19729
secondary electron formation, contrib. of backscattering 1=3006
seeded crystals, growth, in powder moulds 1=1379
self-diffusion, activation energy 0=20843
self-diffusion, determ. by electrotransport meas. 4=28486
self-diffusion, in elec. fields, at 500-570°C 1=14325
self-diffusion, electrolytic 4=17439
shear modulus, rel. to stationary extended dislocations 3=25616
shock wave propag. 0=12453
shock-wave propagation 3=11856
shock wave transmission to marble 0=3585
shock waves, "elastic" high amplitude, meas. 4=2515
shock waves, nonhydrodynamic attenuation 3=21490
single crystal, electron diffraction and scattering 0=3204
single crystal, oxide coated, tensile strength 0=3148
single crystal plates, annealed, mech. props. 0=8106
single crystal plates, plastic deformation 0=8107
single crystal plates, SUP patterns 0=3149
single crystal and polycrystalline, strain curves, relationship between 0=4556
single crystal as sample cell for neutron diffr., study of liquefied gases 1=2745
single crystals, Bragg reflection of neutrons 2=19069

Aluminium—contd
single crystals, obtained by deformation and annealing, substructure 4=26590
single crystals, plastic bending plane in tensile deformation 1=10217
single crystals, prep. by sand-casting 2=14957
single crystals, structure of slip patterns 1=10219
single crystals, u. s. attenuation, anisotropy 0=17885
sintered products, mechanical props., no grain size effect 4=30767
sintering, rel. to pressure, time, temp. 3=6876
6061-T6 Al, eqn. of state, low-pressure 3=17667
6061-T6, uniaxially strained, unloading behaviour 4=23119
size effects in single crystal deform., tested in compression 4=30762
slipband transitions, surface, in plastic deform. 4=7386
slip and dislocations, u. s. study 2=21436
slip line behaviour under stress reversal 3=8441
slip patterns, quenched single crystal plates 0=3152
slip, rel. to structure changes 2=12858
slip, 350-400°C, electron microscopy obs. 3=22793
solidification, use of u.s. vibration 4=23328
solubility of Fe, zone refined Al, var. with temp. gradient 4=13457
solubility in Ge 0=12080
sound velocity 1=16026
sound velocity, effect of high mag. field 3=8356
spark cutting of crystals 1=11669
specific heat 0=2791-4
specific heat, calc. 0=7850
specific heat at const. volume, calc. from phonon dispersion 0=7846
specific heat and supercond. transition 2=6280
specific heat of superconducting alloy down to 1.8°K 2=6281
sp. resistance, solid and molten 0=4314
specific surface area of evap. films 2=15090
spectral emissivity 200-540°C 1=4498
spectral line intensities, oscillation, in toroidal discharge with mag. field 4=14651
spectrum, Al III calc. osc. strengths and spectrometer calibration 4=5381
spectrum, arc, near i.r. 2=3692
spectrum, K, $L_{II,III}$ absorption, fine structure 2=4160
spectrum, plasma, Al III broadening and shift 4=18846
spike formation on surface by Ar ions 3=22880
sputtering by Ar^+, 1·2 MeV, preferential ejection 3=7656
sputtering, ejected atom distrib. 2=13608
sputtering, by Hg, 500-3000 eV, energy distrib. of Al^+ and impurity K^+ 4=21583
sputtering products, neutral and charged, energy distrib. 4=6904
stacking faults 1=12395
stored energy and elec. cond. of deformed samples 1=17508
strain cycling, mech. hysteresis and geom. effects 3=20752
strain energy of dislocations 1=11190
strained, etching 0=21173
strength, impurity, temp. and time depend. 1=12599
stress–strain curves, 1.6-300°K 0=1867
stress/strain discontinuities at 1.3°K, more at higher rates 4=20640
stress/strain discontinuities rel. to grain size and surf. conditions 4=23118
stress–strain meas. at various temps. 0=3144
stress/strain at 1.4–77°K 1=12594
stress–strain relation, dynamic, up to 22kb 4=15700
stress/strain relationships, at 24°C 3=13340
stresses, internal, effect of cyclic strain 3=13345
stretched single crystals, recrystallization 0=4599
striation substructure formed in growth 2=16982
structural changes during deformation at high temp. and strain rates 2=2320
structural changes due to light deformation and heating 1=10007
structure, cyclic, under large strain ranges 3=20740
subgrain growth after cold working 1=14968
sub-grain structure, effect of thermal cycling 1=9109
substructure formation, constant-strain fatigue 3=11328
substructure formation, during high temp. and high strain rate deformation 4=26492
substructure of spherical crystals 3=23463
substructures and dislocations 1=19773

- Sb diffusion in, under elec. field 3=22830
- with UC_2 dispersions as plate-type fuel element 0=9722
- Xe^{133} ions range, 0.5-240 keV 3=19372
- Zn diffusion in, effect of mosaic structure 1=6110
- Zn diffusion, temp. depend. 2=6380
- Zn electric transfer in, effective charge 2=10416

Aluminium compounds
- Alcoa 2011, work hardening 4=20644
- Alcomax III, permanent-magnet props., crystal orientation depend. 0=11822
- alloy strip, u.s. delay line 2=5109
- alloys, absorpt. longitudinal u.s. waves 2=3831
- alloys, brittle failure at low temps. 2=19010
- alloys and compounds with Cr, Fe, Ni, $K\beta_X$ emission, and K absorption 3=10974
- alloys, heat-resisting, creep micro-obs. 2=6739
- alloys, impurity electronic structure 3=22757
- alloys with Mn, Cu, Si, microheterogeneities study 3=1347
- alloys, physical props. rel. to structure 3=8877
- alloys, point defects study by X-ray scatt. 2=19122
- alloys, pre-precipitation clustering model 2=6314
- alloys, quenched, ageing phenomena 2=10915
- alloys, quenching defects, effect on pptn. 3=8909
- alloys, spectrochemical analyser, multichannel, photoelectric, performance. 3=25850
- alloys, superconductivity 3=16873
- alloys, u.s. loss meas. by exponential decay, rel. to transducer thickness 4=30514
- alloys, vacancy—impurity binding energies 3=8424
- alloys, yield point rel. to brittle fracture 2=14880, 21423
- Alni-type alloys, decomposition, initial stages, rel. to coercive force 4=17751
- Alnico, crystal structure and mag. props., connection 4=1830
- Alnico 5, elec. cond., effect of ageing on temp. depend. 1=14355
- Alnico V, hot working 0=10329
- Alnico V, microstructure and crystal structure 1=6525
- Alnico 5, phase transform., α−γ 4=23251
- Alnico V, transmission electron diffraction 0=10158
- Alnico V, transmission electron microscopy 1=7892
- AlNiCo 500, AlNi, magnets, structural constituents, by microsonde and microhardness 3=16090
- Alnico, hysteresis losses 0=13781
- Alnico, mag. props. var. Fe 4=26692
- Alnico, magnet alloys, interaction anisotropy model 0=10117
- Alnico, magnet, sintered, crystal structure 3=16094
- Alnico, magnetic hysteresis a.c. integrals, residual to saturation mag., ang. var 3=25526
- Alnico, magnets, long-term stability 0=18199
- Alnico materials, crystal structure and mag. props. 1=6526
- Alnico, rotational hysteresis 1=11427
- Alnico, structure, max. Al phase identification 4=26692
- Alnico, without Ti, prep. 2=12921
- Alnico−Cu (0-9 at. %), mag. coercivity, crystal struct. 4=17645
- alum, mag. susceptibility, dispersion function of paramagnetic relaxation 0=8031
- alum, optico-acoustic effect 0=20972
- alumina, adsorption of acetylene 1=11601
- alumina, crystal growth 0=3176
- alumina, effect on breakdown of particles on cathode 0=9007
- α-alumina, heat capacity 4=2879
- α-alumina, heat capacity of Calorimetry Conference sample 2=22081
- alumina, n.m.r. of Al^{27} rel. to conc. of adsorbed oxides of Cr, Ni and Co 4=7342
- alumina powder, embedded, dielec. props. 0=3723

Aluminium compounds—contd

alumina, resistance to collision with liquid drops 1=20395
alumina, test of diffusion model of sintering 1=7881
aluminates, Al—O, tetrahedral distance 3=25715
aluminates, dielectric props. 0=13645
aluminoborosilicate glasses, containing Fe, effect of Na_2O on elec. cond. 3=22936
aluminous cement, dipolar absorption studies 1=14535
alums, ferroelectric, n.m.r. temp. depend. 1=11496
alums, mag. susceptibility 1=12522
alums, paramag. dispersion, relaxation times 1=20055
Alundum, valve-heater coatings, leakage currents 0=3796
ANKO-4 alloy, crystal structure at 750-900°C 4=17806
calcium aluminates, hydrated, i.r. spectra and H_2O behaviour 3=13165
chlorites, theory of polymorphism 3=23370
chromia-alumina powders, reflection spectra 4=7124
chrysoberyl [Al_2BeO_4], e.s.r. 1=20205
chrysoberyl (Al_2BeO_4), e.s.r. 2=4252

AlN, crystal growth from vapour 2=19050
AlN, dislocations and stacking faults 1=11217
AlN, dislocations and wide stacking faults 3=4874
AlN, films, 1-10μ from chloride, in electrical discharge in N_2 3=13565
AlN, spiral growth, and polytypical investigations 3=18255

Aluminium compounds—contd
AlN, stacking fault energies, direct meas. 2=3927
Al N whiskers, axial dislocation effect on growth 4=23354
AlN, whiskers growth 3=8812
$AlNH_4$ alum. e.s.r. of Fe^{3+} 4=13321
Al–Na–Sn, ternary alloys, microhardness 0=18260
Al–Nb, tetragonal phase Nb_2Al 0=3221
$AlNbO_4$, lattice constants and 42 X-ray powder lines 4=13580
Al–Ni, effective charges of Ni and Al 2=8839
Al–Ni, elastic props., effect of temp. and composition 1=20305
β–AlNi, faults, rel. to cold-working 3=12988
Al–Ni, γ-phase (Ni_2Al_3) layer growth 0=18302
AlNi, magnets, structural constituents, by microsonde and microhardness 3=16090
Al–Ni alloys, time-to-rupture tests 4=28933
AlNiCo alloys, coercivity, improvement? 3=15795
Al O, $A^2\Sigma - X^2\Sigma$ system, intensity meas. 4=17278
AlO ($A^2\Sigma^+ - X^2\Sigma^+$) system, spectra, electronic transition moment var. 4=12442
AlO, arc spectrum 2=3692
AlO, electronic-band spectra, by exploding wire method 4=25635
AlO emission spectrum, Al—oxygen flame 3=10504
AlO molecule, $a \rightarrow X^2\Sigma^+$ transition, bondlength 3=8122
AlO molecule, Franck–Condon factors, calc. 2=16521
AlO molecule, Franck–Condon factors and r-centroids 2=20794
AlO, spectrum, $B^2\pi - A^2\Sigma$ band 4=22346
AlO, spectrum, bands, visible 3=25089
AlO spectrum, shock excited, $B^2\pi - A^2\Sigma$ band 4=22346
AlO, u.v. band spectrum 1=2330
AlO_2, α, fast-neutron-irrad., dielectric props. at room temp. 4=28620
AlO_3, thermal cond., doped with mag. impurities 3=2742
AlO_4 solution, N.M.R. 1=11768
Al_2O, i.r. spectrum and structure 4=25666
Al_2O, molecular vibr., mean ampl. 4=25665
Al_2O_3 abrasive grains, tensile strength rel. to size 1=20380
Al_2O_3 absorbed water, paramagnetic relaxation times 1=20239
Al_2O_3, action of 2-10 kV electrons 0=1162
Al_2O_3, activated with fluorescein, luminescence 2=4184
Al_2O_3, adsorption of polyethylene-o-phthalate, var. with mol. rot. 4=10622
Al_2O_3, α, colloid double layer zero point of charge pH 4=13750
Al_2O_3, α-phase, e.s.r. meas. of Cr^{4+} 4=7322
Al_2O_3, α-phase, thermoluminesc. after γ-irrad. 3=3072
Al_2O_3, in Al–Al_2O_3–Al films, electron tunnelling theory 4=17526
Al_2O_3, Al–Al_2O_3–Al tunnel cathodes, hot electron transport 4=22762
Al_2O_3 on Al, electroluminescence, applied voltage depend. 1=14658
Al_2O_3, on Al, tunneling current 4=15566
Al_2O_3, amorphous, Na^{24}, Ar^{41}, Kr^{85}, Xe^{125} range meas., comp. to theory 4=27580
Al_2O_3, anodic layers grown on (100) face, structure 4=23565
Al_2O_3, anodized layers, dielec. props. and adsorption of water 1=1124
Al_2O_3, catalytic action on adsorbed methanol and ethanol 3=3362
Al_2O_3, charging by rubbing with Ta wire 3=2966
Al_2O_3, colour centres and γ-radiation effects 1=11230
Al_2O_3, colloidal, adsorpt. on SiO_2 4=23684
Al_2O_3 (corundum), e.p.r. of V^{3+} ions, hyperfine transitions, calc., temp. effects 3=20659
Al_2O_3 (corundum), e.s.r. of Ti and Co ions in, theory 1=20234
Al_2O_3, corundum, Fe^{3+} ion transition matrix elements, calc. 3=23230
α-Al_2O_3 corundum films on Al surfaces, morphology 4=4667
Al_2O_3 (corundum), $K\beta_1$ emission line, complex nature 4=4251
Al_2O_3 (corundum), Mn^{2+} paramag. resonance 0=11942
Al_2O_3(corundum), Raman band intensities in Stokes region, temp. depend. 1=5052
Al_2O_3, corundum, V-doped, magnetic susceptibility 4=1801
Al_2O_3, Cr impurity, sharp lines of optical spectrum 2=4141
Al_2O_3, Cr^{3+} phonon—photon double-quantum transitions 1=6071

Aluminium compounds—contd

Al_2O_3, Cr^{3+} in, transition probabilities for $d\epsilon^3\ ^2\Gamma_3$ 0=11939
Al_2O_3, creep, boundary-diffusion controlled 3=15997
Al_2O_3, crystal structure, rel. to methods of prep. 1=6517
Al_2O_3 crystals, thermal expansion 1=918
Al_2O_3, damping of piezoelec. oscills. by $NaNO_3$ film 2=678
α-Al_2O_3, defect prod. by irradiation 2=12478
Al_2O_3, density increase on sintering by adding MgO 4=20788
α-Al_2O_3, density and lattice parameters 0=14008
Al_2O_3, derived from Al hydroxides, crystal struct. 4=30844
γ-Al_2O_3, dielec. props. of adsorbed water 2=8891
Al_2O_3, diffusion of Al 2=21056
γ-Al_2O_3, diffusion of Rn 1=17563
Al_2O_3, dislocation relaxation 1=11204
Al_2O_3, dislocation relaxation 2=8217
Al_2O_3, doped, microwave u.s. spin—phonon interactions 3=23242
Al_2O_3, Cr^{3+} e.s.r. 3=23225
Al_2O_3,Cr^{3+} e.s.r.absorpt.line depend.on Cr conc. 4=26385
Al_2O_3, e.s.r. of Cr^{3+} excited state, optical detection 0=4508-9
Al_2O_3, e.s.r. of Cr^{3+}, linear elec. shifts 3=25568
Al_2O_3, e.s.r. of Cr_2O_3 3=13297
Al_2O_3, e.p.r. of Fe^{3+}, 2-80°K, 3 cm 3=20649
Al_2O_3, Gd^{3+} e.s.r. spectrum at 24 kMc/s 1=7784
Al_2O_3, Gr^{3+}e.s.r., matrix elements, calc. 3=3165
α-Al_2O_3, Mn^{4+} e.s.r., sharp line fluorescence and thermoluminescence 4=26236
α-Al_2O_3,Mn^{2+},Fe^{3+} e.s.r.appd elec.fld effect 4=26406
Al_2O_3, e.s.r. of Mn^{2+}, forbidden transitions 2=6690
Al_2O_3, Ni ion e.s.r. 3=23232
α-Al_2O_3, e.s.r. of Ni^{2+} impurity 2=4263
Al_2O_3, e.s.r. of Ni^{3+}, Pt^{3+}, Jahn—Teller splitting 4=28879
Al_2O_3, e.s.r., transition metal ion impurities 2=3811
Al_2O_3, V^{3+} paramagnetic resonance 1=20235
Al_2O_3, effect on Bi_2O_3 polymorphism 4=23253
Al_2O_3, elec. conductivity of single crystals and high temp. 3=15610
Al_2O_3, elec. field gradient calc. 2=10297
Al_2O_3, elec. resistance, effect of H-ion bomb. 0=20865
Al_2O_3, electric stresses, safe, for 5000 hrs. at 800°-1140°C 4=28611
Al_2O_3, electroluminescence 4=1764
Al_2O_3, electron emission from Al—Al_2O_3—Au 3=4177
Al_2O_3, electron microscope exam. specimen preparation 4=23522
Al_2O_3, electron—nuclear resonance of Cr^{53} 1=11490
Al_2O_3, energy loss of 4-30 keV H^1 and He^4 3=4394
α Al_2O_3, enthalpy 3=25198
Al_2O_3, evaporation, melting point discontinuity 4=18497
Al_2O_3, evaporation rate 0=1057
η Al_2O_3 with Fe^{57} at surface, Mössbauer effect 4=25816
Al_2O_3, field emission 1=13099
Al_2O_3, film, on Al, interaction with dislocations 1=965
Al_2O_3, films on Al, elec. cond. and structure 2=23258
Al_2O_3, films on Al, elec. and electroluminesc. props., effect of water vapour 4=20427
Al_2O_3, films, on Al, interfacial topography 4=15815
Al_2O_3 films on Al, stress—strain relns. 4=23128
Al_2O_3 films, current flow, mechanism 3=22976
Al_2O_3, films, dielectric props. 2=10551
Al_2O_3 films, electron scatt. at <10 keV, transmission, ang. distrib. and energy spectrum 1=1922
Al_2O_3, films, far i.r. optical props. 2=4153
Al_2O_3, films, formation, structure and conduction 2=10937
Al_2O_3 films, formed on electropolishing, structure 1=6491
Al_2O_3 films, impurity cond. and negative resist. 4=22760
Al_2O_3 films optical props., 0.2-1.6 μ, rel. to appl. 4=22893
Al_2O_3 films, preparation 3=5147
Al_2O_3 films, resistance, voltage depend., tunnelling 1=3731
Al_2O_3, films, transmission of medium-energy electrons 2=2075
Al_2O_3 films, transmission of slow electrons 1=7102
Al_2O_3 films, tunnel currents for various contacts 4=22761
Al_2O_3,fluorescence spectra 1=10109
Al_2O_3, fracture of anodic films on Al 2=23784
Al_2O_3, fracture strength 3=23351

Aluminium compounds—contd

Al_2O_3, γ-irrad., e.s.r. meas. 4=17676
α-Al_2O_3, γ-irrad., thermoluminescence 3=23129
Al_2O_3, γ-irrad. and unirrad., defect annealing 2=12463
Al_2O_3, gaseous environment effect on fracture strength 4=28935
Al_2O_3, growth of spirals on Al during electropolishing 3=1261
Al_2O_3, heated to 1000°C, spectral emittance 4=14443
Al_2O_3, hydrated, dielec. props. 100 c/s-100 kc/s 3=4938
Al_2O_3, internal friction, kilocycle freq., to 1850°C 2=2315
Al_2O_3, ionic transport number 1=7625
Al_2O_3 layers, fluorescein-activated, luminesc. 3=3036
Al_2O_3 layers, photostimulated exo-electron emission 1=16375
Al_2O_3, molten, viscosity up to 2200°C 4=16096
Al_2O_3, Mössbauer effect hyperfine struct. of Fe^{57} 4=30501
Al_2O_3 μ-size spheres, Mie scatt., 0.5-10.0 μ 4=22845
Al_2O_3, neutron irrad., surface heterogeneity, effects on Kr adsorption 1=20660
Al_2O_3, nuclear mag. dipole coupling 2=6700
Al_2O_3, n.q.r. of Al^{27}, linear elec. shifts meas. 4=28907
Al_2O_3 (1 wt% NiO), i.r. absorption of Ni centres 2=16830
Al_2O_3, with 1 wt.%Zr. dislocations after annealing 3=12976
Al_2O_3 particles, Mie scatt. and absorpt. cross-sections for e.m. waves 4=26175
Al_2O_3, phonon generation, coherent, via transducer of insulating CdS films 4=28353
Al_2O_3, photoelectric emission, delayed, film thickness var. 4=24733
Al_2O_3, pore-free, creep behaviour 1=7826
Al_2O_3, positronium formation and dynamics 3=25264
Al_2O_3 powders, thermal cond. meas. 3=21584
Al_2O_3, rare-earth activated, electroluminescence 2=14756
Al_2O_3, resistivity, rel. to creep 3=17868
Al_2O_3 (ruby), Cr^{3+} line optical spectrum 0=20978
Al_2O_3, sandwiched between Pb, Schottky electron field emission 3=9828
Al_2O_3, sapphire, absorption, acoustic 2.8 Gc/s 4=12628
Al_2O_3 sapphire crystal dislocation hexagonal arrays 4=12764
Al_2O_3, sapphire, luminescence and absorption spectrum, with flash light excitation 4=30696
Al_2O_3, self-diffusion of O in, temp. depend. 0=13562
α,γ—Al_2O_3, semicond. props. 3=6491
Al_2O_3 single crystal creep 0=8120
Al_2O_3, solubility and crystal growth in molten PbF_2 4=29614
γ-Al_2O_3, sorbed H_2O dielectric relax. and resonance phenomena 3=22975
Al_2O_3. spin--lattice relax. of Cr^{3+}, effect of V^{3+} 3=15953
Al_2O_3. x H_2O, surface—OH groups rel. to fluorescein luminescence 2=4183
Al_2O_3, thermal cond. rel. to mag. field, V, Cr impurities 2=16614
α-Al_2O_3, thermal cond., 3°-300°K meas. 2=10342
Al_2O_3, thermal diffusivity 3=14296
Al_2O_3, thermal etched, secondary electron emission 3=9845
α-Al_2O_3, thermal props., 1200°-2500°K 2=18529
Al_2O_3, on thin Al films, negative resistance coeffs. 3=4906
Al_2O_3 thin films, dielectric constant 3=8555
Al_2O_3, thin films, electron secondary emission 2=9625
α-Al_2O_3, threshold energy for lattice displacements by electron bombardment 0=6045
Al_2O_3, Ti^{3+} g-factor theory 2=18947
Al_2O_3 transition metal impurities, optical spectra 2=3908
Al_2O_3, trigonal, energy levels calc. of Fe^{3+} 4=1356
Al_2O_3, tunnel junctions, rel. to electrodes 2=14545
Al_2O_3, u.s. absorption at low temps. 4=20203
Al_2O_3, u.s. attenuation, 3000 Mc/s, low temp. 4=28363
Al_2O_3, use in high-vacuum traps 0=16745
Al_2O_3, use in tunnel-emission devices 1=8962
Al_2O_3, u.v. luminesc. during electrolytic form. 3=8615
Al_2O_3, V^{3+} zero-field splitting in, pulsed field meas. 1=1270
Al_2O_3, vaporization 0=10698
α-Al_2O_3, vibr. spectrum in i.r. 2=21252
Al_2O_3, whisker growth 0=3183
Al_2O_3, whisker growth on single crystals 2=6786
Al_2O_3 whisker growth, by vapour deposition 4=7567

Aluminium compounds—contd

α-Al_2O_3 whiskers, transport and deposition 4=7566

Al—Zn, crystal vacancies, interaction with Mg impurity atoms 4=12725
Al—Zn, crystallographic orientation of nodules 0=1940
Al—Zn, diffusion of Zn, effect of fatigue 1=19807
Al—Zn alloys, diffusion processes in, effect of Mg atoms 4=28477
Al—Zn, elec. cond. and phase diagram 0=2851
Al-Zn, elec. resist., short-range order effects 1=14354
Al—Zn, eutectic alloy, interlamellar spacing meas. 4=4650
Al—Zn, formation of Guinier—Preston zones 3=11284
Al—Zn, fracture process, age hardened 4=28932
Al—Zn, G.P. zone formation, elec. resist. and X-ray study 1=20600
Al—Zn alloy, G.P. zones 3=20865

Aluminium compounds—contd
  Al-Zn alloys, Guinier–Preston zones, effect of d-irradiation 4=23248
  Al—Zn, Guinier—Preston zones, meas. 3=8881
  Al—10% Zn, grain boundary shear at room temp. 0=18269
  Al—Zn, hardening, precipitate and dispersion 4=28948
  Al—Zn alloy; hardness, critical shear stress var. 4=30768
  Al—Zn (10-98 wt.%), heat cycling, effect on internal friction and elongation 4=13389
  Al—Zn alloys, heat-treated, internal friction 4=17725
  Al—Zn, Mg atom—vacancy interaction 3=20167
  Al—Zn, n.m.r. intensities 1=20260
  Al—Zn, nearest neighbour interact. energy 3=8886
  Al—10 wt % Zn—0.10 wt% vacancies, interaction with Si, Ge, Sn atoms, rel. to clustering, calc. 4=28994
  Al—Zn, phase transform., cooling depression of boundary 4=26544
  Al—Zn, with ppt. particles, plastic deformation 3=3222
  Al—Zn alloys, precipitation, rel. to dislocation loops, cold working effects 4=13473
  Al—10% Zn, pre-pptn. rate, plastic deform. effect 3=20896
  Al—10% Zn, pre-precipitation, resistometric study 1=1426
  Al—Zn, residual elec. resistance 3=25321
  Al—Zn, resistivity increase during ageing 0=17994
  Al—10% Zn, shear along grain boundaries 1=6470
  Al—30% Zn, spherical pre-pptn. zones 3=8911
  Al—Zn, spherical segregation zones 3=8875
  Al—Zn, supercond., critical temp. 2=7494
  Al—Zn, supercond., nuclear spin—lattice relax. 2=12827
  Al—Zn, transition phase in ageing 1=15130
  Al—Zn, X-ray K-absorption, common conduction zone 1=14616
  Al—Zn, yield point, effects of unloading 0=21126
  Al—Zn, zone-hardened, elec. resistivity 3=10717
  Al—Zn, zone structure, two phases 1=20572
  Al—Zn—Mn alloy, ageing sequence, 100°C 3=13542
  Al—Zn—Mg, clustering, effect of Mg 4=17754
  Al-Zn-Mg, clustering, elec. resistivity meas. 4=28995
  Al—Zn—Mg alloy D.T.D.683 of high fatigue characts., notched and unnotched 4=7406
  Al-9.5% Zn-2.5% Mg, fatigue fracture cleavage facets 2=12869
  Al—Zn—Mg alloy, G.P. zones 3=20865
  Al—Zn—Mg alloy, microstructural damage produced by glide 4=23127
  Al-Zn-Mg, precip. sub-microscopic 2=12933
  Al-Zn-Mg, stress-corrosion life 2=16968
  Al—Zr, structure 1=6528
  $CaO—B_2O_2—Al_2O_3$ glasses, structure and d.c. conductivity 1=14397
Americium
  X-ray spectra, h.f.s. 1=14615
  Am I, f.s. and h.f.s., J-value 1=7436
  Am IV in $LaCl_3$, energy levels, assignment of 10 lowest 4=20177
  Am^{3+}, electronic energy levels, theory and expt. 4=22310
  Am^{3+} in $LaCl_3$, absorption spectrum 2=2232
  Am^{3+} spectrum, missing band 17500 cm^{-1} 4=30377
  Am^{241}, 1.6-2.1 μ spectrum, h.f.s. 1=811
  Am^{244}, 10.1 hr, decay scheme 2=7938
Americium compounds
  absorption spectra 0=20656
  AmO_2, X-ray M absorpt. spectrum 4=7146
Ammonia
  See Nitrogen compounds.
Amorphous state
  See also Vitreous state. (Heading introduced in 1963).
  atomic distribution curves, termination effects 4=23614
  diatomic solid, electron energy states 4=17387
  electron-diffraction measurements, background correction method 3=20952
  graphite powders 4=10624
  Mössbauer effect of Fe^{57} 4=15405
  photo-excitation and carrier-trapping meas. 4=22804
  polymers, temporarily cross linked, viscoelasticity theory 3=11309
  quartz, structural changes on heating in H_2 3=20917
  structure, lattice-like and liquid features 4=2134
  X-ray scattering, low angle, large incident beam 3=21446
  Al_2O_3 films, on Al, interfacial topography 4=15815
  Bi, films, electron diffr. exam. 3=16123

Amorphous state—contd
  Ga_2Se_3, films, electron diffr. exam. 3=20915
  Ga_2Te_3, films, electron diffr. exam. 3=20915
  In_2Se_3, films, electron diffr. exam. 3=20915
  In_2Te_3, films, electron diffr. exam. 3=20915
  $S—P_4S_{10}$ solid solutions, effect of P on S chain stabilization 3=20916
  Sb_2Se_3, films, electron diffr. exam. 3=20915
  Sb_2Te_3, films, electron diffr. exam. 3=20915
  Te alloys, metastable phases 3=20877
Amplifiers
  (Heading introduced in 1962).
  a.g.c., to correct for light source variations in spectrofluorometers 3=5605
  beam—plasma, for mm waves 4=16509
  bolometers, input, transistorized amplifier 2=19769
  broad-band parametric, exptl. information 3=1908
  CdS u.s., free carrier trapping effect 4=21236
  cathode follower, hybrid, for vibration pickups 4=8591
  chopper-stabilized, in analogue computer for respiratory response curve 2=13205
  circuit adjustment, parametric amplifiers 4=18643
  for counter, semiconductor, transistor 3=12048
  current, use of secondary electron multiplication 4=16533
  current-sensitive, for nuc. pulses 3=3982
  d.c., for He-temps., using In—Pb superconduction 2=5245
  d.c., high gain, Zener stabilized starved pentode 4=18642
  d.c., for 10^{-6} to 10^{-8} A range 4=420
  d.c.. for 10^{-9}-10^{-12} A range 3=3978
  dielectric filament with fluorescence 3=17071
  dielectric parametric, microwave 4=24828
  electromagnetic waves, crossed-field double-beam drift-space, dispersion relations 4=11789
  electrometer amplifier for partial pressure gauge 4=18292
  electrometer amplifiers, review 2=19834
  electron beam— plasma, in waveguide and axial mag. field 4=30044
  electron multiplier, for X-ray pulse recording 2=7697
  EMR model 33, noise reduction 4=14545
  ferromagnetic, parallel-pumped 3=490
  field-emission images, amplification 2=15959
  with frequency and bandwidth variation 4=14549
  galvanomagnetic d.c. amplifier 3=3977
  galvanometer conversion to direct coupled amplifier 4=29848
  galvanometer, photocell twin 4=24525
  galvanometer, photocell twin, improved 4=24526
  gamma amplifier-discriminator 4=14977
  $Ge—Al—Al_2O_3—Au$, meas. 3=888
  glow discharge-controlled 2=11575
  He—Ne, maser, gain saturation, 3.39 μ 4=19293
  hybrid electrometer preamplifier 4=21437
  information efficiency, by quantum statist. 3=484
  integrating, for magnetic meas., theory and application 4=8597
  integrating, with photocells, applic. to permanent magnet meas. 4=21438
  klystron, pumped, for linear electron accelerator 2=5397
  klystrons, in electron linear accelerators 2=7683
  laser, use in e.m. signal detection 4=11793
  laser, forward and backward wave, max. gain 3=22019
  laser and maser, review 4=24878
  laser, noise reduction 4=14927
  laser, nonlinear gain characteristics 3=22018
  linear amplification, quantum statistics 4=27275
  linear, for junction-type detectors 2=11592
  linear preamplifier, low noise, for junction detector 2=13520
  linear, quantum noise derivation 3=5837
  logarithmic amplifier—detector, alignment 4=11496
  logarithmic, instantaneous, for audiofreqn. 2=5258
  logarithmic, solid-state 3=24167
  low-frequency narrow band with 5×10^6 gain 4=16403
  low noise ballistic impulse type 3=14635
  low noise detector amplifiers using optimum filtering, for nuclear spectrometry 4=9018
  low noise, quantum effects 3=5839
  magnetic modulators of even harmonic type 3=4247
  magnetic, transistorized, for continuous currents 3=24164
  magneto-optical double resonance meas., low-drift d.c. 3=5533
  maser amplif. noise 4=19263

Amplifiers—contd
- maser, pulse propag. 4=24885
- maser, ruby and ammonia 3=5892
- metal-film thermometers, timing appl. 2=5259
- metal-interface, expts. and theory 3=888
- meter amplifier for liquid conductivity meas. 4=18633
- microwave, by electron beam—plasma interact., theory 4=685
- miniature broadband electrometric, for space research 4=27442
- mm.wave by resonance saturation of HCN 4=19196
- molecular, for 90°K working temp. 2=17947
- noise reduction, in mag. balance circuit 3=5608
- non-overloadable 2=1367, 19853
- nonoverloading linear, with improved risetime 4=14552
- non overloading, with 2 × 10^4 gain 4=16404
- nuclear pulse-amplifiers, current sensitive 2=22138
- nucleonic preamplifier, low-noise 4=776
- optical, by medium with neg. absorption 2=17602
- parametric, using corundum 3=13230
- parametric, as first stage of mag. res.
- parametric, gain pumping conditions with nonlinear immittance element 4=24517
- parametric, L-band, He-cooled 3=24462
- parametric, with lossy modes, quantum noise 4=8603
- parametric, 108 Gc/s, 1 mW, doubler 4=14882
- parametric processes, quantum fluctuations and noise 3=4264
- parametric, quantum fluctuations and noise 2=1046
- parametric, for radioastronomy interferometer 2=13157
- parametric, radio astronomy, 1370 Mc/s, test 3=18649
- parametric, for radioastron. 21 cm H line meas. 3=7044
- parametric, for radioastronomy, development, problems of use 4=4927
- parametric, supercond. film 4=21648
- photocompensation amplifier, high sensitivity 2=19840
- photoelectric optical amplifier, use for voltage measurement 4=16387
- photometric precise meas. 3=3862
- for photovoltaic cells, transistor 3=19134
- preamplifier, low-noise, biased amplifier, for semicond. detectors 2=6479
- preamplifier for semicond. counters 4=27723
- preamplifier for scintillation counters 4=16737
- preamplifier, wide band 4=16863
- pulse amplifiers, fast-rise transistor type 4=8594
- pulse amplifiers, in nuclear physics 2=7780
- pulse, fast transistorized 4=14548
- pulse, transistorized, fast 3=21685
- quantum, transmission-type, for use with laser beams 4=8975
- for radiation detectors 4=21351
- radioastronomy meas., low-noise, usefulness 3=5840
- scintillation spectroscopy 2=19853
- selective, highly sensitive 2=22148
- semiconductor, low-noise 3=5841
- student lab. instrument 3=346
- for superconducting cryotron, crossed-film, obs., low noise, valve 3=21671
- supply pulse principle, for μsec pulses 2=19866
- transistor amplifier with 2 μsec rise-time 4=27450
- transistor, high input resistance 3=14482
- transistor, low-noise, low-freq. 2=15867
- travelling wave 4=8350
- travelling-wave, electron beam noise reduction 2=17885
- travelling wave, mechanical analogue demonstration 3=21191
- tunnel diode, low-noise, microwave 3=6610
- tunnel diodes, amplification conditions 2=23425
- 23 kMc/sec, microwave beam—plasma amplifier 4=16510
- u.s., use of piezoelectric semiconductors 4=22488
- ultrasonic, travelling-wave, theory confirmed 4=6735

Analogue computers
- See Calculating apparatus, analogue apparatus.

Anelasticity
- See Internal friction.

Anemometers
- continuously computing standard deviations of wind velocity components 4=17880
- corona, optimum parameters 4=18223
- electronic 3=16641
- glow-discharge, for gas turbulence meas. 2=19591
- heat transport, high stab. 0=8685

Anemometers—contd
- hot-wire amplifier, noise minimization 2=1176
- hot wire, const. resistance, for fluct. meas. 4=16133
- hot-wire, multi-stage amplifier 1=15931
- Ling hot film, use in liquid turbulence meas. 3=3790
- for liquid local vels. meas. 14090
- microanemometer, acoustic for microstructure of turbulence 0=10396
- photoelectronic 2=2669
- resolving, with digital output 0=756
- semicond. thermoanemometer for low-vel. air flows 2=19590
- standard cup contact 4=30926
- transistor cup 0=10398
- turbulence meas., hot wire, review 3=18840
- turbulent meas., streamwise and cross-stream, hot wire 3=14196

Angle measurement
- See also Alignment.
- alignment, optical systems, by elastic deform., to 0.01" 3=21523
- amplitude modulated reticle, error response 4=16214
- angular displacement, interferometric method 0=5178
- circle reading recording, photoelec. method 0=18583
- coded scale transducer 0=8586
- on curved photographic plates 1=2580
- by diffraction grating pair Moiré fringes, displacement, review 4=18013
- digital meas. and automatic recording of angular position 1=2583
- divided circles, testing 0=14573
- goniometer, three-circle, for diffraction meas. 3=1277
- inclinometer, pendulous, use of radial gratings 0=4983
- interferometer 3=24046
- interferometer, to 30° 4=27332
- mirror and prism instruments, adjustment 0=12397
- observational cosmology, angular measurements 0=18605
- parallelism determination, by optical interferometry 0=5177
- particle emission angles, conversion lab. system to moving system 2=17405
- reference angles, formation by mirror system 1=10472
- rotation through small angles, polarimetric system 1=6818
- small-angle scattering in nuclear emulsions, recording 1=5621
- solid, calc. for rectang. detector rel. to rectang. source 2=7782
- theodolites, survey 0=5147
- unit, solid 4=21002
- using Jamin double-passed interferometer 1=1824

Angular velocity measurement
- See also Stroboscopes.
- galaxies, radial speeds 1=15521
- gyrotron, principles 3=5402
- heterodyne instrument, for photoelec. or e.m. transducers 2=1103
- instantaneous speeds of rotation, measuring method 3=9402
- by laser, ring cavity 4=21007
- slip between metal and rubber-covered pressure rollers 0=8134
- stroboscopic tachometer for strobe photography 3=3905
- tachometer, low torque, for yarn speed meas. 0=8589
- using masers, optical, ring, travelling-wave 3=9401

Annealing

Antiferromagnetism—contd
exchange interactions in antiferromag. crystals 1=3918
exchange interactions, e.s.r. of ion pairs 2=4245
exchange-inversion magnetization, model 0=18206
f.c.c.crystals,theory 4=26403
f. c. c., with Ising interactions, low-temp. props. 4=13259
f.c.c. lattice, Ising, ordering theory 3=8649
in f.c.c. lattice, by spin-wave method 3=5030
ferrite single crystals, quantum mechanical theory 0=13824
and ferroelectricity, simultaneously 4=13258
and ferromagnetism, coexistence in subst., magnetization processes, theory 4=7242-3
ferromagnetism, weak, in antiferromagnetic crystals 3=6728
fine particles, appearance of weak ferromagnetism 2=12668
fine particles, superparamagnetism 1=20155
generalized molecular field theory 4=20561
Green function method 4=17664
Green's function method for $S \geqslant 1/2$ 4=28850
ground state, with anisotropic exchange interaction, perturbation theory 1=5068
ground state, diagram technique 2=753
ground-state energy of antiferromag. spin system, perturbation expansion 0=18208
ground state energy, theory 3=25548
ground state of isotropic antiferromagnetics 0=8064
ground state, proof of zero long-range order 1=7773
Heisenberg-Dirac model, internal consistency 0=3104
Heisenberg, layer structures, Curie temps. 4=10254
Heisenberg linear chain, mag. curve at zero temp. 4=10296
Heisenberg magnets with general spin, conc. and dilute, props. 1=20060
Heisenberg model, high-temp. staggered suscept. 3=20624
Heisenberg model,linear,partition function 4=26280
Heisenberg model, for many-electron systems 2=10645
Heisenberg, Padé approximants, application 3=25516
Heisenberg, variational treatment, phase boundary 4=13256
helical, in crystals 1=12546
helical spin configurations, thermal variation of pitch 1=14753
helical structures, relaxation processes 3=18106
helical structures, relaxation processes, theory 4=7295
helicoidal, of $MnAu_2$, neutron diffraction study 1=14763
helicoidal structures in nonmetals, theory 4=20564
high field at mm wavelengths 0=13863
impurities, localized magnetic states, interact. 4=12740
indirect coupling of nuclear spins with spin waves 0=11952
insulators, indirect exchange between electrons 3=5003
interacting spins, ground state Hamiltonian 3=11044
Ising lattice, Monte Carlo calc. of order parameters 1=5064
Ising lattice, plane triangular, susceptibility 1=14755
Ising lattices, plane square, and honeycomb 2=21344
Ising lattices, simple cubic and body-centred cubic 2=21345
Ising model, behaviour of Mayer cluster series 0=8066
Ising model and high temp. susceptibility 0=21036
Ising model for loose lattices 1=20152
Ising model, relaxation props. 2=10643
Ising model, statist. mech. study 2=16579
Ising model, susceptibility calc. 1=6263-4
Ising model, transition to hard-sphere lattice gas 1=6378
Ising model, two-dim., Kramers–Wannier duality as Poisson's summation formula 4=18079
isotropic, with arbitrary spin, thermodynamic Green's functions 4=1849
layer structure, by Green function techniques 3=20625
linear antiferro. chain, theory 3=3148
linear chain, equivalence to one-dimen. Fermi gas, ground-state calc. 0=3106
linear chain, ground-state energy 0=18175-6
linear chain, ground state, long-range order 2=12798
linear chain, low-lying states 0=13842
linear chain of six H atoms 1=12262
linear chain with spin $\frac{1}{2}$, Heisenberg model 4=4388
linear chain of spins, anisotropic, ground-state energy 0=3105
linear chain, spin-wave spectrum 3=6730
linear chain, two soluble models 2=2290
linear chains with anisotropic coupling 4=26279
linear spin chain with exchange interact. 3=11040

Antiferromagnetism—contd
longitudinal mag. by transverse circ. polarized field 2=18929
longitudinal mag. by transverse circ. polarized field 3=6731
low temp. free energy, Heisenberg antiferromag., propagator calc. 4=13257
mag. moment relaxation in dielectric crystals 1=3926
mag. short-range order and mag. specific heat, theory 1=20095
mag. specific heat, rel. to susceptibility 3=3142
magnetic current relaxation, with "easy plane" anisotropy 4=17665
magnetic energy absorption, uniaxial crystal 3=25551
magnetic ions in insulators, book 4=20521
magnetic space groups, irreducible represent. 2=16897
magnetic structure, from mag. and nuclear elastic scattering neutron spectra 4=13578
magnetic symmetry, spontaneous macroscopic magnetization 0=11820
magnetization of lattices, theory 2=732
magnetization reversal for weak ferromagnetism 4=13147
magnetization temp. dependence of isotropic cube 0=11905
magnetoelastic waves 4=22490
magnetoelectric effects, spin—orbit statistical theory 3=4900
magnetostriction, cubic, field strength and orientation, var. 4=28851
magnetostriction, theory review 4=22970
magnon dispersion law, Bloch wall energies 0=1811, 3102
magnon–phonon coupling effects at low temp. 2=755
magnon renormalization near transition temp. 3=15751
mechanism 0=1810
metallic antiferromagnetics 0=13846
metals, explanation of non-existence of superconductive state 1=9511
metals,helicoidal mag.structure,theory 4=26346
metals, mag. ground state, transitions theory 3=3094
metals, models indicated by heat capacity expts. 1=8879
metals, spin ordering, elec. cond. 0=4312
metals, transition to ferromag., collective-electron treatment 3=13227
metals, transition, theory, s—d exchange model 4=12668
modern theory, review 3=6697
molecular field equations, othorhombic crystal at zero temp. 0=6247
molecular-field theory for rutile structures 2=6665
neutron diffr. mag. cross-section, effect of long-range order 1=7773
neutron scattering by exchange-coupled lattices, theory 0=16138
neutron scatt. (slow neutrons), calc. 2=752
neutron scatt., slow, polarization effects 3=15861
neutron scatt., spin–spin and spin–phonon effects 2=18914, 21347
neutron scattering by uniaxial antiferromagnetics 1=20158
neutron scatt., by uniaxial antiferromagnetics 2=6678
neutron scatt., in uniaxial antiferromagnetics 2=21348
neutron scattering in uniaxial antiferromagnetics 3=3149
noble metal–transition metal alloys 0=13847
nonlinear and "latent" effects, analysis 4=20563
nuclear mag. relax. near Curie temp., theory 3=23267
nuclear mag. resonance, acoustic, theory 4=4422
n.m.r. within antiferromag. Bloch wall, theory 2=16937
nuclear magnetic resonance effects 4=13331
n.m.r., theory for large nuclei concn. 3=8726
nuclear spin—lattice relaxation 3=18137
optical and i.r. props., review 4=22815
ordered spin systems 1=6266
ordering energy levels of interacting spin systems 2=21342
ordering in linear chain crystals 2=6273
orthoferrite structures theory 4=13260
Overhauser effect in magnet, theory 4=17691
paramag. resonance, rel. to short-range order 2=4246
particles, theory 2=732
perturbation theory, connected diagram expansion for thermodynamic props. of spin system 1=6377
phenomenological theory, problems 0=2983
phonon critical magnetic diffusion 4=30725
piezomagnetism, magnetic symmetry, moduli tensors 0=11906

Antiferromagnetism —contd
- point defects and their effect on antiferromag. props. 3=15483
- polymer chains, theory 2=732
- quadratic crystal, mag. conditions, theory 2=10680
- quantum statistical mechanics 3=5027
- quantum statistical mechanics 3=8693
- random antiferromag. system, statistical mechanics 0=674
- random dilute magnets, theory 2=2292
- rare earth metals, indirect exchange interaction 1=3917
- regular superstructures, spin wave dispersions 1=20153
- review of Soviet work since 1958 3=1135
- rhombic crystals, non-collinear, in 4 sublattices 2=23644
- rhombic crystals, spin non-collinearity 2=23643
- screw spin structure at abs. zero, magnetiz. 2=14761
- in semiconductors, crystallochemical model 3=20565
- semiconductors with small mobility 2=18668
- simple cubic lattice, BPW method 4=20524
- simple cubic lattice, calc. 2=18896
- in small grain, superposition of superparamagnetism, calc. 1=14757
- small particles, superantiferromag., rel. to magneto-crystalline coupling 2=10679
- sound absorption, threshold, by spin wave transitions 4=6733
- space symmetry of dipole structures 4=20746
- spherical Ising model and associated lattice gas 4=4387
- spin chains, nonuniform 3=25550
- spin configuration, lattice theory 2=12670
- spin-configuration stability, classical, in presence of competing exchange forces 0=1813
- spin configurations 0=8036
- spin configurations coupling by anisotropy 3=3091
- spin configurations, ground-state method of det. 1=935
- spin-density-wave mechanism 3=15903
- spin—electron relaxation, with conduction electrons 0=1812
- spin ordering below 1° K 4=20560
- spin ordering theory, based on collective electron model 3=25517
- spin—phonon coupling, theory 4=28787
- spin—spin interaction via phonon field 3=23192
- spin-wave dispersion, mag. structure depend. 0=11904
- spin-wave dispersion, structure anisotropy, effect of next nearest neighbours 1=14754
- spin wave dispersion, superstructural anisotropy 3=15902
- spin-wave dispersion, superstructure anisotropy 1=14756
- spin-wave dispersion for various superstructures 0=12669
- spin-wave effects on specific heat, theory discrepancy 1=9978
- spin-wave interactions in antiferromagnetics 1=11456
- spin-wave interactions, with elastic waves 0=10163
- spin wave interactions with phonons 1=11417
- spin-wave interactions, theory 0=2984
- spin-wave scatt. of phonons, relax. time calc. 4=28852
- spin-wave spectra and Fermi surface of rare-earth metals 1=11422
- spin—wave spectra, Heitler—London approach, cluster expansion 4=17629
- spin wave spectrum and damping consts. 4=15668
- spin-wave spectrum, effect of dipolar fields 4=1850
- spin wave theory of b.c.c. lattice 3=1156
- spin wave theory in collective electron model 4=17663
- spin wave theory of planar structures 3=25515
- spin waves, coherent amplification 4=4338
- spin waves, dispersion law, for $S = \frac{1}{2}$ 2=8662
- spin waves, dispersion, superstructural anisotropy 1=3916
- spin waves with ferromag. double planes 3=23194
- spin waves, freq. spectrum and damping const., quantum statistics 4=20562
- spin waves, interaction with Bloch wall, theory 2=8663
- spin waves, interaction with cond. electrons, contrib. to resistance 1=5000
- spin waves in metamag. crystals, theory 3=13286
- spin waves, phenomenological theory, review 1=7739
- spin waves, review 4=7226
- spin waves, theory 4=7296
- spins, collective motions; spin-wave freq. rel. to temp. 3=984-5
- spinels, cubic, spin configurations, theory 0=16145
- spinels, "normal", theory 3=1017

Antiferromagnetism—contd
- statistical mechanics, phase transitions, interreln. of theories 4=8098
- statistical theory and short-range order 3=18108
- statistics, Green functions appl. 4=28853
- sublattice magnetization, effect of large uniaxial anisotropy 0=21060
- sublattice switching, monitoring 1=20163
- substructures in b.c.c., mol. field treatment 3=20621
- superantiferromagnetism in fine grains 1=20156
- superconducting, existence theory 1=9512
- superconductivity, BCS electron pairs 3=9681
- superconductivity, possibility 3=16857
- superexchange antiferromagnet, 2-dimensional, in mag. field, partition function 0=10183
- superexchange, delocalization effects 0=13851
- superexchange interaction, anisotropic, mechanism 0=11902
- superexchange interaction, anisotropic, rel. to weak ferromagnetism 0=18205
- superexchange interaction, band theory 0=11920
- superexchange interaction, electron orbital symmetry 0=2802
- superexchange interaction, empty orbitals role 2=4235
- superexchange interaction, four-electron model 0=21059
- superexchange interaction, general theory 1=17940-1
- superexchange interaction, theory including orbital deformation of intervening ions 0=21058
- super-exchange model, order and correlation 1=1245
- superexchange, right-angled 0=11903
- superexchange, theory 0=1817
- superstructures, existence range, spin-wave analysis 2=16927
- susceptibility of f. c. c. lattice substance 0=4501
- susceptibility on Heisenberg model 2=21302
- susceptibility at moderate fields, calc. 1=7771
- theory based on Green's functions 3=15767
- theory for spin $S = \frac{1}{2}$ system in external field, Neél temp. calc. 4=15657
- thermal cond. of antiferromagnetics at low temp. 2=18536
- thermodynamics props., spin wave theory 3=3143
- thermodynamics, uniaxial crystals in mag. field 2=12800
- transition-element cpds., rel. to covalent bonding 1=1202
- transition to ferromagnetic layer, spin configuration calc. 4=13125
- transition to ferromag. structure, critical field 3=25499
- transition metals and alloys, electronic structure, exchange integral, sign 4=13224
- transition metals, d-electron interactions 0=11908
- transition metals, exchange interaction, Green functions method 2=21343
- transition metals, indirect exchange interaction 1=3917
- two sub-lattices of spin-$\frac{1}{2}$ particles, coupled by exchange interactions 4=10294
- uniaxial antiferromagnet, magnetization, temp. depend. 4=1848
- uniaxial antiferromagnets, magnetoelastic props., thermomag. theory 4=26348
- zincblende-type compounds, superexchange interactions 1=7741

Antimony
- abrasive wear, effect of brittle fracture 3=13386
- Sb^{121,123} atoms, hyperfine structure 1=2294
- atom, analytical wave functions 3=25051
- atomic mass of Sb^{121,123} and neutron separation energies 3=714
- in Bi, effect on phase transformations 3=25751
- concentration in Ge in equil. with Bi—Sb alloy vapour 4=1513
- condensation, in vacuum 0=1943
- crystal growth, oriented single-crystal square-sectioned rods 3=3264
- crystal growth from vapour phase 4=2022
- crystallization from melt, elastic vibr. effect 3=18248
- crystallographic angles 4=23457
- crystals, single, etching by H, rel. to microstruct. 4=26693
- cyclotron reson. and electron Fermi surface 3=4851
- cyclotron resonance 2=6308
- cyclotron resonance with linearly and circularly polarized radiation 1=14235
- deformation, various imperfections 1=972
- de Haas—Shubnikov effect and ellipsoidal carriers 4=6945
- de Haas—van Alphen effect 3=18059
- de Haas-van Alphen effect, liquid He temp., calc. 4=28758

Antimony—contd
de Haas—van Alphen oscillations 3=4818
diffusion, in Ag films, elec. cond., 70-105°C 1=979
diffusion, in Al, under elec. field 3=22830
diffusion, in Al—Ge, Al conc. depend. 1=988
diffusion with Bi,at film interface 1=14302
diffusion into Cu and Cu:Pb 2=12451
diffusion in Cu, 560°-896°C 4=22609
diffusion in Cu single crystals 0=17971
diffusion in GaSb 0=4359
diffusion, in Ge, under const. elec. current 1=14307
diffusion in Ge, rel. to local electric fields, 750°-900°C 4=6871
diffusion on Ge surface, 250-650°C 3=20223
diffusion in SiO_2 3=25294
dislocation movement by etch-pit method 1=17540
dislocations, revealed by etching 1=14283
distribution coefficient in Si 1=14456
donor, in Si single crystals, stacking faults 4=28574
donors, shallow, valley—orbit splitting 2=8348
effect on diffusion of Ag^{110} in Cu 0=11647
effect on recombination in Si 1=17709
elec. cond., pressure depend., up to 200 000 kg/cm^2 1=5001
elec. cond., pressure depend., up to 200 000 kg/cm^2 1=11251
electric field gradient calc. 3=8332
electrical properties, temp. depend. 4=1588
electrodiffusion in Sn, d.c.-induced, analysis 4=12785
electronic structure of crystals 0=17910
energy-level structure, valley-orbit splitting in Ge 0=20903
epitaxy on monocryst. substrates 2=12896
etch grooves on monocrystals 2=4368
evaporated films, structure 0=18414
Fermi surface, by Shubnikov—de Haas effect 4=9904
film formation, from vacuum evaporation of InSb 0=735
films, on amorphous support, microstructure examination 2=10952
films, on Sb cleavage faces by thermal evaporation Ion, structure 3=16136
films, conductivity, elec., time var. 4=26003
films, crystallization 0=13949
films, crystallization, Al, Be, Cr, Ag, Au, Bi, Cu, Sn additions 0=14080
films, crystallization, influence of substrate 0=738
films, electron-beam energy losses 2=23142
films, internal stress, elec. cond. 3=20701
films, optical constants in vacuum u.v. 1=19940
films, optical transmission and electron absorption 0=21247
films, transverse electric field effects 3=15541
films, work function 2=9612
galvanomagnetic effects and band structure 1=19833
gaseous molecules in equilib. with solutions of In and Sb 0=965
grain boundaries, low-angle, annealing displace-
grain growth in Sn, effect of small Sb impurity 1=15152
graticule production, evaporation technique 2=2871
growth orientation, preferred, effect of Sn additions 4=17783
i.r. absorptance and elec. carriers 3=4970
impurity in Ge, Lyman series, chemical splitting 3=939
from InSb, on heating 4=1969
ions, activated, diffusion in Cu 2=18597
isotopes, mass spectra 3=8215
lattice vibrations, longitudinal and transverse 4=9826
liquid, density rel. to temp., and m. pt. 3=3793
liquid, optical constants 1=11762
liquid, optical and elec. props. 2=5019
liquid, structure 0=19111
luminescence, zinc borate, activator 2=2254
magnetoacoustic geometric resonances meas. 4=25846
magnetoelec. effects and band structure 3=8513
magnetoresistance, Ek/Hk = Const. at 4·2°K, exptl confirmation 3=6563
magnetoresistance at 4.2°K 2=12524
magnetoresistance, nonohmic, low temp., thermal origin 3=8512
magnetoresistance, 100-300°K, up to 320kOe 4=26004
magnetoresistance oscs., 1.2°K, and Fermi surface 4=4138
microhardness decrease, rel. to i.r. irrad. 3=18218
molten, elec. resist. and Hall effect 3=9475
molten, structure analysis 1=12863

Antimony—contd
multipole spectrum 4=19949
neutron coherent-scatt. amplitude 3=25201
nuclear quad. interaction of $Sb^{121,123}$ 3=8746
optical props., i.r., low temp. 4=28672
optical props., 0.5-25 eV meas. 4=13042
optical refl., phase shift dispersion meas. 4=28709
paramag. resonance 0=16163
paramagnetic reson., rel. to g-factors of cond. electrons 2=12814
phase transformations, 90 k bars 4=4501
phase transitions at high pressures 4=29003
phase transitions, up to 70 kbar 3=19067
plastic deformation, twin interactions 2=4334
poly- and mono-crystalline vac. deposited films, structure 4=10609
reflectivity and transmission, vacuum u.v., 6-30 eV 3=13145
secondary electron emission, film thickness depend. 1=13123
single crystals, dislocations by electric erosion 1=14282
single crystals, dislocations by electric erosion 1=17531
solid solubility in Ge, saturation diffusion expt. 3=3342
solubility in solid Sn 1=15160
specific heat, 1.3-4.2°K 1=3606
specific heat, 20-700°C 3=22659
thermal conductivity 1=920
thermal properties, temp. depend. 4=1588
thin films, prep. and props. 2=21567
thin films, resistivity and its temp. coeff. 1=19826
thin films, resistivity and temp. coeff. 2=3986
thin vacuum-deposited films, properties 1=7885
twin layers, thermal etching and annealing 1=12617
twinned layers, load depend. 0=13936
twinned single crystals, recovery 2=21465
twins, wedge-shaped, props. of boundaries 4=10454
u.s. attenuation in mag. field, geometric reson. 3=4817
u.v. emission spectrum, use for analysis 0=16397
valence electrons, approx. wave-functions 0=469
vapour pressure 1=13023
X-ray continuous spectrum, Ohlin structure meas. 4=4242

Antimony compounds
alkali antimonides, electric and photoelectric properties 0=20927-8
alkali antimonides, photoemission and related props. 1=1907
semiconducting, Li_3Sb, Na_3Sb, NaSb 4=1589
thin films, structure 1=20666
Sb—alkali metal alloys, as photocathodes 0=15056
Sb alloys, with Al, Be, Cr, Ag, Au, Bi, Cu, Sn, film crystallization 0=14080
Sb alloys, single crystals, twin formation under load 0=18272
bromide—chloride mixture, boiling mech. 0=10807
chalcogenide systems, optical props. 0=13609
chalcogenides, photo-e.m.f. 1=6178
with Gp VII elements, crystal structure 1=15123
halides, absorption spectra in pressed disks 0=8001
hexahalide complexes, electron transfer spectra 0=20650
meta-antimonates (of Gp II metals), luminescence rel. to impurities 2=8558
with rare-earth metals, crystal structure 4=15791
antimony sulphide sols, specific heat meas. 0=18443-5
SbAl, hot-hardness 2=2337
Sb-Bi, crystallization of supercooled alloy system 3=21624
Sb—Bi scattering time at low-temp. 3=10809
SbBr, spectrum, emission, vibr. analysis 3=22539
$SbBr_3$, liquid, solid and in CS_2 and CCl_4, Raman spectrum 0=13688
$SbBr_3$, melting and polymorphism 3=23371
$SbBr_3$ (Menshutkin) complexes, nuc. quadrupole resonance rel. to structure 4=26456
$SbBr_3$, vapour pressure, heat of vapourization, bond energy 3=21629
Sb chalcogenide, fused, elec. props. 2=21917
$Sb^{121}Cl_3$ crystal compounds, n.q.r., temp. var. 4=4433
$SbCl_3$, $SbBr_3$ complexes with benzene and derivs., and naphthalene, n.q.r. 4=23081
$SbCl_3$, i.r. spectrum 1=4936
$SbCl_3$ liquid state, u.s. velocity and compressibility 1=18406
$SbCl_3$, melting and polymorphism 3=23371
$SbCl_3$ molecules, thermal vibs. 2=8083

Antimony compounds—contd
$SbCl_3$, negative ion formation, by electron bombard. 4=453
$SbCl_5$, bond length differences, theory 3=10497
$SbCl_5$, i.r. spectrum 1=4936
$SbCl_5$ liquid, $Sb^{121,123}$ n.m.r. 2=11391
$SbCl_5$, SbF_5, potential field and force constants 0=1501
Sb–Cs layers, secondary electron emission 0=12629
Sb–Cs photocathodes 0=10757
$SbCs_3$ photocathode, fatigue 2=15945
$SbCs_3$ photocathodes, temp. depend. 0=2380
$SbCs_3$, photoelectron emission and absorption 1=16378
SbD_3, mean vibration amplitudes 1=14000
SbF, band spectra 1=19632
SbF_5, mol. potential consts., calc. 4=9724
Sb–Fe, polarization of Sb nuclei 0=9520, 13115
SbH_3, distortion and potential energy constants 1=7452
SbH_3, force constants and interaction constants 0=20600
SbH_3, i.r. spectra 2=8095
SbH_3, mean vibration amplitudes 1=14000
SbH_3, Urey-Bradley force field 3=22552
Sb^+H_4 ions in Sb^+H_4 halide crystals, i.r. spectra 2=8095
SbI_3, conductivities, elec. and thermal, thermoelectricity, microhardness 4=1624
SbI_3, nuclear quadrupole resonance of $Sb^{121,123}$ 2=21388, 23724
SbI_3, optical props. meas. 4=1720

electric breakdown static, role of metastable atoms 4=16453
electrical cond. and breakdown, in hot-cathode diode 1=11919
elec. discharge buildup rate, 5-60 cm Hg, photon delay times 0=2333
elec. discharge, d.c., mobility and Townsend coeff. 0=8992
elec. discharge, electron energy distrib. 1=16316
elec. discharge, electron velocity distrib., 0.1–20 mm Hg 0=16981

Argon—contd
elec. discharge, h.f., electric field and space charge 0=5298, 16981
elec. discharge, plasma oscillations, electroacoustic waves 0=2369
elec. discharge, positive column in transition region 3=9753
elec. discharge, pulsed, density and electron conc. 0=12593
elec. discharge, r.f., in A–O_2, optical maser action 2=22908
elec. discharge, r.f., in const. mag. field 2=164
elec. discharge, r.f., in magnetic field 0=19648
elec. discharge, r.f. refractive index meas. 0=3778
elec. discharge, ring config., mag. field effects 1=7035
elec. discharge, striations 0=14993
electric discharge, sustained, in shock-ionized gas 4=8640
electric discharge, 10-100 kc/s, in 1000-3000 Oe 4=24609
elec. discharge, Townsend type, and in A-air 0=12595
elec. discharges, h.f., d.c. probe studies 0=14980
elec. discharges, ion emission, with W, Mo, Ta cathodes 0=9092
elec. discharges, probe meas., 1-20 mm Hg 0=19690
elec. sparks in T-shaped tube, oscillations 2=1405
electron affinity, calc. 0=9745
electron avalanches, mean energy and drift velocities 4=11546
electron capture in, by ions with Z=(2-18) 1=18779
electron capture in, by multicharged ions of light elements 2=163, 22168
electron collision cross-section 2=9600
electron diffusion—mobility coeffs. ratio 3=4023
electron drift velocities meas. 4=24561
electron drift velocity, 77-373°K 1=2300
electron drift velocity, calc., in A–CO_2, A–N_2 mixtures 1=177
electron elastic scattering factors, nonrelativistic theory 4=15298
electron energy distrib., effect of CO_2 and H_2 impurities 4=11256
electron impact spectra 4=6520
electron mobilities, cloud chamber meas. 3=23941
electron mobility in, Ramsauer–Townsend effect 0=8991
electron orbit angular momentum, distrib., pressure depend. 0=13388
electron scatt., elastic and inelastic, from electron transport 4=11509
electron scatt., elastic, at low energy, calc. 0=2725
electron scatt., multiple, 40-130 keV, spatial distrib. 4=887
electron scatt. at zero energy 0=2726
electron stopping power 0=352
electron transport coeffts. and cross-sections calc. 4=11257
electrons, low-energy, drift velocity 4=27479
equations of state, experimental determination 0=16733
eqn. of state, internal energy and entropy 1=6896
excitation in positive column at medium pressures 4=5570
excitation temp. meas. in plasma jet using transition probabilities of lines 4=12382
excitation of upper levels, in d.c. discharge, quenching collision broadening 4=14598
excited states above $^3P_{3/2}$ continuum limit 2=10200
films, spectra, absorpt., and Xe impurity states 10°K 4=1721
first ionization coeff. 0=5271
fluid, radial distrib. function calc. 4=14101
fluid, viscosity at const. density 0=8674
gas, acoustic isotherms 3=16659
gas, Aston bands, rel. to ionization 3=4020
gas, corresponding states theory 2=15643
gas discharge, pres. grad. in positive column 3=19208
gas, electron back diffusion in 3=5693
gas flow, free-molecular, momentum transfer to metal surfaces 3=5456
gas, ion and electron drift velocities 2=22172
gas, ionization by H atoms and protons, 10-180 keV 2=13540
gas, ionization by H atoms and protons, 10-180 keV 3=5620
gas, ionization by H^- and O^- ions 1=4558
gas, ionized, rarefied, charge-carrier diffusion 3=16906
gas, Joule—Thompson zero press. coeff., exptl. and theoret. 4=27208
gas, K X-ray fluorescence yield 2=20758
gas, lifetime curves of positrons, fine structure 4=15047

Argon—contd
gas mixtures with N_2, H_2,CO and CO_2, behaviour of low energy electrons 1=11911
gas, mutual diffusion with NH_3, −20° to 60°C 2=13365
gas, sound velocity and absorption 3=9509
gas, transport props. and interaction of atoms 4=18240
gas, u.s. vel. meas., 3.5 Mc/s at 3500 atm 3=1728
gas, u.s. vel. meas., 3.5 Mc/s at 3500 atm, rel. to compressibility 2=21946
gas, velocity of sound 3=5497
gas, viscosity, - 78.5° to 100°C, below 200 atm 3=7223
gas, Z-pinch discharge, rel. to pressure 3=9762
in GM counter with trace Xe, N_2, O, self-quenching mechanism 2=242
gettering, electrical in low-pres. discharge in steel vessel 3=7461
glow, admixture rel. to Ne reference tube 3=4054
glow discharge, energy distrib. to electrodes 2=17800
glow discharge, inhomogeneous r.f. electric field 2=1408
glow discharge, Mo cathode, cathode drop and work function 2=19919
glow discharge, moving striations 0=7082
glow discharge, temp. distrib. 0=1120
glow discharges, electron emission rel. to photons 3=7632
glow, localized density meas. by X-ray fluorescence 4=18724
h.f. ion source 1=18939
heat accommodation with W surface 4=29674
high-temp., kinetic and transport parameters 1=18466
i.r. absorption by plasma jet 2=1459
interactions with graphitized carbon black 2=6854
interatomic, Morse potential force consts. from viscosity 4=9787
interdiffusivity with metal vapours at high temp. 4=24266
intermolecular potential 1=14121
intermolecular potential functions, 2nd virial coeff. 1=7503
ion, Ar^{40}, charge distrib. at high velocities 3=7447
ion beam bombard. of Ag Cl, catalytic activity 0=4709
ion beam collisions with gas atoms, diff. scatt. cross-sect. and charge state distrib. 4=25593
ion beam, range in metals from sputtering yield 3=5721
ion beams, bombard. of Si diodes, improved characteristics 0=15973
ion beams, in Ge and Si etching 0=1898
ion collision data by ion cyclotron reson. 3=21697
ion emission, field 3=19371
ion h.f. source, beam width 2=20042
ion mobilities from electron density meas. 4=2948
ion-pair formation, by 100-300 kV X-rays 2=7560
ion recombination in wind tunnel nozzles 2=19592
ion source, low-energy, for small specimens 3=14666
ionically pumped, re-emission 3=9518
ionization ahead of cylindrical shock waves 3=1759
ionization by α-particles, fluctuations 1=18762
ionization, by atoms and charged Ne and A ions 2=153
ionization by atoms and charged Ne and A ions 3=365
ionization, Auger effect 3=12069
ionization by charge transfer from fast H beam, neg. ion formation 1=16277
ionization coeff. and uniform field breakdown 1=11909
ionization coeffs. and uniform field breakdown, for low E/p values 3=4011
ionization by collision with N^+ and Ne^+ at keV energies, model 1=7024
ionization cross-sections near threshold, electron impact 1=16257
ionization cross-section, partial, when bombarded with protons, 0.8-3.75 MeV 4=27481
ionization by electron impact, with fast crossed-beam 4=24589
ionization by electron impact, structure near threshold 1=7025
ionization, by electrons, mass spectr. study 2=15883
ionization, by electrons and protons, Born approx. 2=9529
ionization energy, calc. 0=9747
ionization, energy to produce an ion pair 1=647
ionization and excitation processes 2=19895
ionization by fast He atoms and He^+ ions 4=24566
ionization and formation of long-lived excited ions 4=25492
ionization by h.f. pulse, recombination 3=4024
ionization, He atoms and ions, 15-180 keV 4=2944

Argon—contd
ionization by ions or fast atoms, electron energy distrib. 1=4560
ionization, by Li positive ions 1=4565
ionization, multiple, by Auger effect, meas. 4=11520
ionization, multiple, by electron impact > 260 eV 2=22171
ionization, multiple, by electrons 0=2318, 7070, 14965
ionization, by N and O ions 2=11617
ionization, photo, from M_1 to L edges 4=14575
ionization potential curves, meas. 0=10949
ionization potential meas. by mass spectrometry, influence of mag. field 4=21458
ionization potential by photoelectron energy spectra 3=7434
ionization, in pulsed discharge 2=1388
ionization rates in shock-heated gas 4=11522
ionization, single and double, by electron impact 4=11523
ionization, total, by 8-100 keV heavy ions 4=21459
ionized gas, elec. conductivity and degree of ionization 1=5421
ionized gas, elec. conductivity and degree of ionization 1=11913
ionized partially, shock heated, electronic cond. in mag. field 4=27225
ionized, slightly, cyclotron reson., collision frequ. det. 4=461
ions in Ar gas, at 500°K, transfer, exchange cross-section, field, temp. var. 4=29870
ions. A_r^+—A_r potential energy functions 1=818
ions, Ar^+ and Ar^{2+}, ionization cross-sections, for electrons 4=16433
ions, A_r^+, bomb. of metals, secondary emission 0=9078
ions, A_r^+, bombardment of Al, Cu, Mo and Ta sputtering ratios 0=9110
ions, A_r^+, cathode sputtering of 16 metals full-plane threshold energies 3=22875
ions, A_r^+, charge transfer reactions with CH_4 0=16976
ions, Ar^+, collisions with Ar at keV energy, inelastic energy loss 3=709
ions, Ar^+, emulsion sensitivity, up to 25 keV 4=9037
ions, Ar^+, 15 keV bombard. of Cu, secondary atom emission 4=17457
Ions, Ar^+, 5 mA monoenergetic source 3=12253
ions, Ar^+, scatt. from metals, 40-80 keV 4=14766
ions, A_r^+ sputtering of Cu 0=10990
ions, A_r^+, sputtering of f.c.c. metals, Ge and Si 2=13608
ions, Ar^+, 20 keV sputtering of Cu 4=17459
ions, A_r^{3+}, resonance charge exchange 0=8999
ions, Ar IX, X, XI, XII, spectra, grazing incidence meas. 4=25490
ions, bombard. metals, secondary electron emission 4=8822
ions, bombard. of Mo, Zr, graphite, secondary emission 2=220, 22273
ions, bombarding Na films, secondary electron emission 0=19728
ions bombarding W, ionic entrapment and thermal desorption 4=13693
ions, bombardment effects on Al 3=10706
ions, charge exchange with A_r atoms, cross-section, calc. 1=4563
ions, charge exchange with molecules, meas. 4=14574
ions, 8 keV, for etching 0=8173
ions, electron capture and loss, 250-1400 keV 4=16431
ions, energy loss and effective charge in gases at < 10 MeV/a.m.u. 3=1937
ions, forbidden transition probabs. calc. 3=25055
ions (41), range in Al, 0.7 keV-2.25 MeV 3=19372
ions, h.f. source, optimum oper. conditions 0=15085
ions, irradiation of Ag, surface structure 0=4311
ions in lattice focused collision sequences in W, Mo 3=22881
ions, medium energy, sputtering yeild, metals 3=14679
ions, positive; mobility 3=4021
ions, range and ionization in emulsions 0=12772
ions, range in W, keV energies 3=22878
ions, reflection from Cu single crystal, anisotropy 4=29993
ions, scatt. by Cu, graphite, max. 4=19118
ions, scattering, 30 keV, ang. distrib., on graphite, Cu, W 3=5720
ions, sputtering of Cu, atom, energy distrib. 4=24754
ions, sputtering in Cu, temp. var. 4=10018
ions, sputtering of KCl, 400 eV 3=4215
ions, 20-100 eV, sputtering of Au 2=13607

Argon—contd
ions in upper atm., form. and disappearance study 4=26838
ions, vacuum u.v. spectra 2=1201
ions, $(Z=2$ to $13)$ range 2=7674
isotope measurement in meteorites 1=15437
isotope, production rates in meteorites 1=15436
isotope separation in jet, with He addition 2=8072
isotopes in liquid state, vapour pressure, by phenomenological cell model 1=9385
isotopic thermal-diffusion factor, 127° to 653°K 4=5239
Joshi effect, thermionic analogue 3=21736
laser action, high-gain 4=19286
laser, ionised 4=27684
lattice dynamics, effect of vacancy 4=28347
light source lamps, spectra, 230-1200 mμ, effect of structure and excitation 3=16760
line broadening and shift in spark discharges 0=13417
liquefied, positive ion mobility meas. 4=27194
liquid, atomic distrib. near triple point 2=13319
liquid, breakdown, electric, mechanism, impurity effects 4=5200
liquid, density as function of pressure and temp. 1=8107
liquid, density and short-range coordination 2=21893
liquid, diffusion of A^{37}, Kr, HT 0=14635
liquid diffusion, self, transport theories criticism 4=18187
liquid, elec. breakdown 2=11383
liquid, elec. strength 4=16121
liquid, elec. strength, effect of electrode surfaces 1=18424
liquid, elec. strength, electrode surface effects 0=12423
liquid, electron drift velocity 3=21400
liquid, electron drift velocity, mol. impurities effect 4=16122
liquid, electron mobility 0=8993
liquid, electron trapping by O$_2$ and N$_2$ impurities 3=19175
liquid, eqn. of state at low temp. 3=18801
liquid and gaseous, sound vel. meas. at high pressure 0=8695
liquid, ion mobility, gas-kinetic interpret. 1=139
liquid, ions, long-range osc. interactions 3=9439
liquid, kinetic props., rel. to molten KCl 2=15570
liquid, mean square force, isotope separation factor 4=21090
liquid, metal powder production by spark erosion 4=30999
liquid mixture with methane, viscosity 3=7185
liquid, neg. ion mobility in 3=1678
liquid, neutron inelastic scattering 0=14651
liquid, positive ion mobility 2=21895
liquid, radial distrib. function 2=19537
liquid, scatt. diagrams evaluation 2=17439
liquid, scintillation response to protons, 10-50 MeV 3=19635
liquid, self-diffusion 0=3514
liquid, self-diffusion 2=13328
liquid, shock Hugoniots 0=8653
liquid, sound vel., u.s., at high press. 0=19132
liquid systems, binary, with O, N and O 3=132
liquid, thermal cond., expt. and theory 4=169
liquid, transport processes, config. relax. model 4=8163
liquid, transport props., theory and expt. compared 0=904
liquid, viscosity 4=5161
liquid, viscosity meas. 2=15541
liquid, viscosity meas. 4=21108
liquid, viscosity and mol. interaction 3=9423
liquid, viscosity and surface tension, simultaneous microbalance method 4=24188
Lorentz-Lorenz functions 0=8713
lubricating full journal bearings 0=5046
luminescence spectra, by α-ray excitation, variation due to N$_2$ and Hg impurities 1=8165
in MHD generators, ionization, non equilib., seeded with Cs 4=18663
magnetohydrodynamic generators, small-power 2=15879
mass spectra at raised pressure in ion source 1=16430
melting lines, to 1500 atm 2=5220
in meteorites, isotopic composition, dating 0=7
in meteorites, loss, rel. to gravitation interaction decrease 3=11523
microwave absorption in compressed gas 2=13380
mixture with I$_2$, positive column 1=18796

Argon—contd
mixtures with He, diffusion and thermal diffusion meas. 0=14688
mixtures with He, l.p. elec. discharge, positive column study 0=16970
mixtures with He, l.p. glow discharges 0=15001
mixtures with He and Ne, potential parameters, from viscosity 1=14122
mixtures with He, separation in supersonic jets 0=16726
mixtures with He, u.s. propag. 0=14721
mixtures with He and Xe, binary and ternary 0=5054
mixtures with He and Xe, mutual diffusion 0=8702
mixtures, ionization by electrons in electric field 1=8306
mixtures with N$_2$, condensed phase diagram 0=8845
mixtures with propane, electron cascades 0=7248
mixtures with Xe, bands in cathode glow of discharge 0=7766
molecular beam production from Ar—H$_2$ gaseous mixture 4=15389
molecular beam scattering on LiF cleavage plane 3=2680
molecular beam techniques 0=2758-9
molecular flow through an orifice 0=14675
molec. and ion beams, detection and velocity meas. 2=12355
molecular ion formation, under static discharge 0=243
molecular parameters, self-consistent set 1=12335
molecule-ion, formation kinetics 2=16569
monolayer adsorption of He 1=20681
multilayer adsorption of He 1=20682
mutual diffusion with N$_2$ 2=5051
mutual diffusion with O$_2$ 2=5050
occlusion by faujasite crystals 0=8333-4
optical emission from α-particle excited Ar, and quenching 4=28117
optical pumping, under high pressure of alkaline atoms 0=17694
orthopositronium lifetime 3=2252
pair coupling, Ar I, 5g level 4=28116
phosphorescence, emission process 0=13412
phosphorescence of films deposited at low temp. 0=6200
pinched discharge, linear, surface instabilities 0=15012
plasma, absorption coeff., continuous, 4000-7000 A, 8000-24 000 A 3=1972
plasma, accelerated, velocity and impulse 1=9560
plasma, axisymmetric, interferometric analysis 4=16467
plasma, bumpy torus, afterglow 3=19270
plasma, with Cs, elec. cond. and heating field 4=27545
plasma, confinement by periodic mag. field 2=13568
plasma, containing W Langmuir probe, work functions lowering 4=14685
plasma, deionization in magnetic field 3=19249
plasma diagnostics, microwave reflection method 4=18901
plasma, drift of ions, influence of mag. field 2=1394
plasma, due to e.m. driven shock wave 2=11640
plasma, effect of 1 or 2% Fe on temp. 4=11633
plasma, elastic electron collisions, temp. dependence 1=18793
plasma, electron-ion recomb. study 2=22229
plasma, enthalphy—entropy diag. to 10^5 °K 2=9564
plasma, 5.4 kJ linear Z-pinch, collapse stage meas. 4=8737
plasma, flowing, thermodyn. phase changes theory 2=11637
plasma flows, high speed, microwave diagnostics 4=18903
plasma gun 3=19238
plasma gun, two-stage, repetitively fired, coaxial, characteristics 4=19068
plasma, hard X-rays, in strong mag. fld., rel. to E/p 4=11612
plasma, hydromagnetic waves, fast, expt. 4=14714
plasma, insulating-boundary thickness behind shocks 3=24456
plasma jet, elec. and optical studies 3=24276
plasma jet, heat transfer rates 0=2371
plasma jets, subsonic, power dissipation, temp. 3=5663
plasma, in linear pulse discharges 2=22213
plasma, magnetoacoustic resonance 4=19022
plasma for m.h.d. generator 4=11501
plasma, Ne—A mixtures, diamag. moment 0=19693
plasma, optically thick in red, i.r. 3=16924
plasma, partially ionized, anomalous microwave radiation at cyclotron resonance 4=5613
plasma, partition function cutoff and ionization potl. lowering 2=1423

Argon—contd
plasma, partition functions, thermodynamic props. 3=21819
plasma pinch formation, dynamic stability 1=2975
plasma pinch, shock waves 4=11649
plasma, K seeded, elec cond. at atmospheric press. 4=24638
plasma produced by shock waves, mag. driven, spectra 4=24648
plasma, quenching by SF_6 electronegative seeding 3=19237
plasma, radiation temperature resonances, r.f. meas. 3=4121
plasma, seeded, electrode phenomena, tensor cond., electrode heating 4=18925
plasma, shock-heated, elec. cond. between electrodes 4=11586
plasma, shock heated, Hall e.m.f. meas. 4=18897
plasma, shock ionized, electron conc. and temp. meas. 4=18896
plasma, spectral line intensities 2=17845
plasma, spectral line self-absorpt. meas. technique 4=24665
"plasma stream" generation, 15 000°K 0=1125
plasma, supersonic streams, seeded with electronegative gases, props. 4=16468
plasma, temperature, spectroscopic 3=7502
plasma, thermal and electrical properties 0=1126
plasma, thermal transport, shock tube studies 4=16466
plasma wrapped round Cu vapour; contraction and emission 3=7557
plasma, z-pinch effect at high gas densities 4=14693
plasmajet i.r. emission spectra 1=11070
plasmajet, power output 2=1458
plasmajet, used as light source 2=109
positive column with 0.1% N_2, positive characteristics 2=13549
positive ion production, by energetic He^+ impact 4=24569
positive ions, bombard. glass, electron emission 1=1909
positive ions, bombard. glass, electron emission 1-4638
positive ions, 5—25 keV, sputtering of Cu 1=8363
positron thermalization in 3=24706
pot. prod., on 10-25kV X-irradiation, and reson. press. vars. 3=7449
preconduction current pulses, at low press. and audio freq. 0=1105
pressure-density isentropes 1=11785
pressure—density relationship, isentropic curves 1=11789
properties at triple point 1=16178
propylene—argon system, liq.—vapour equil. 4=11410
pumping by Bayard—Alpert ionization pump 1=15971
radiation cooling after shock heating 4=18482
Rayleigh scatt., depolarization. 3=175
re-emission from glass surface by bombardment with Kr 2=3091
refractive index, 1600 A 3=9592
refractive index, vac. u.v., using Cherenkov radiation 3=14214
refractive index and Verdet const., theoretical deriv. 1=8164
scattering by Ni, polycrystalline 4=19996
scattering of 153 MeV oxygen ions 2=16489
scattering of rare gas beams, rel. to long-range forces 2=10222
in scintillation counter, and mixed with N 1=3077
scintillator, used at 75 atm. 6=15190
second virial coeff. and Kihara params. 2=11412
shock excited, in granular pressings, temp., calc. 4=2774
shock-front structure and reflectivity 1=167
shock front thicknesses 0=10729, 16774
shock fronts structure, optical refl. meas. 4=5282
shock-ionized, mag. field interactions 1=1970
shock tube study 2=7244
shock wave flow rel. to radiation absorption 2=9307
shock wave mechanisms by exploding wire 2=19596
shock wave structure, Navier—Stokes calc. 4=5283
shock wave temp. calc. 4=18327
shock waves in argon, curvature and extent 1=10536
shock waves in Ar—He mixtures, shock front structure 1=8154
shock waves, cylindrical propagation 4=14264
shock waves, electromagnetically driven 2=19601
shock waves, luminosity extinction against transparent surfaces 4=11295

Argon—contd
shock waves meas. by microwave techniques 3=9545
shock waves, normal and oblique, equilib. ionization calcs. 3=23973
shock waves, precursors ahead 4=18340
shock waves, rel. to intermol. force laws 3=1755
shock waves, successive, propagation 2=9304
shock waves, temperatures, photomultiplier meas. 4=18326
solid, absorption spectrum, vac. u.v., at 4.2°K 0=13699
solid, application of Grüneisen theory 0=15798
solid Ar: H, 1s-2p, 1s-2s excitation calc. 4=30548
solid, band structure, orthogonalized plane-wave method 1=17444
solid, compressibility 3=11147
solid, creation energy of a vacancy 0=9905
solid, crystal structure 4=29094
solid, density, 77°-83°K 1=19948
solid, e.s.r. spectrum of NO_2, analysis 2=10695
solid, energy bands, augmented plane-wave calc. 4=12691
solid, energy migration and transfer to methane impurities 2=20917
solid, energy of vacancy formation 3=20163
solid, environmental perturbations on foreign atoms and molecules 0=20661
solid, equation of state, Lennard-Jones and Devonshire applicability 3=20117
solid, Grüneisen const., Born's theory 3=25203
solid, H, D impurity 1s-2p transitions obs. 4=30503
solid, H_2 and CH_4 impurities, irrad., energy migration and isotopic effects, e.s.r. meas. 4=25928
solid, lattice dynamics 1=6068
solid, lattice thermal cond. at low temps. 2=10341
solid, lattice vibrations, longitud. polarized, interactions 1=905
solid and liquid, neutron scatt. meas. 4=27171
solid and liquid, thermal props. 2=6269
solid, Mn atom absorption spectrum, 4°K 3=23074
solid, metastable hexagonal phase 4=23247
solid, neutron absorption cross-section 0=20153
solid, refractive index meas. 3=15647
solid, rotation and ortho—para conversion of water molecules 4=1275
solid, self-diffusion coeff. 2=18595
solid, self-diffusion coeff., calc. 1=11223
solid, spec. heat, 16-35°K 1=911
solid, spec. ht. and virial coeff. 0=4251
solid, thermal cond. 0=9868
solid, thermal conductivity 1=920
solid, thermal expansion, linear chain model 3=17665
solid, thermal expansion at low temp. 0=8844
solid, u.v. absorpt. and electron states 3=2998
solid, vacancy contrib. to spec. heat 3=8364
solid, vapour snakes 3=11224
solid, vel. of sound 0=9848
solid, velocities of elastic waves 2=14375
solubility in distilled water 4=11184
solubility of H and D in liquid A 0=19118
solubility in H_2O, heat and entropies 4=159
solubility in liquid H_2, 20-33°K, 35 atm 0=75
in solution with CH_4, condensed state, density 1=12873
solution of Hg, spectrum and discrete sites of Hg 1=15842
sorption, on chabazite 4=15830
sorption in porous glass, condensation ht. and pore shape 4=20819
sorption in Vycor glass and chromia gell, thermodynamics 4=20818
sound absorption, freq./press. depend. 1=8186
sound-velocity, compressibility, sp. ht. ratio, at high press. 1=140
spark breakdown, filamentary, streamer mechanism 1=10679
spark channel brightness 1=5428, 10681
spark discharge, current and voltage meas. 1=18786
spark discharge, line broadening and shift, Stark effect 0=17702
spark discharges, high-temp. prod. 0=7105
spark discharges, I, V and spectral line intensity, time depend. 1=283
spark gaps, high current, cooling 4=27503
spark lines, pressure broadening and Stark effect 0=5874
spark, long, at high press., stabilized by rotating gas 4=14612

Argon—contd
sparks, temp. fall from 50 000° to 5000°K 4=8659
specific heat, solid, three parameter interatomic potential calc. 4=17360
spectra, continuous 2=16473
spectra, electron excited, excitation cross-sections 0=9759
spectrum, ArII, energy levels anal. 0=15638
spectrum analysis of singly-ionized argon 1=4900
spectrum, collision broadening in near i.r. 1=11066
spectrum, continuous, vacuum u.v. 3=7246
spectrum, continuous, visible, shock excited 4=29678
spectrum, discharge, electric, r.f., similarity to Geisler tubes at high powers 4=5612
spectrum, emission in high pressure arc plasma 3=8180
spectrum, i.r., interferometric meas. 4=6467
spectrum, neutral, var. with type of elec. discharge 4=18782
spectrum, reson. lines 1048A, 1967A, oscill. strength, meas. 4=30378
sputtering of Au 2=3092
sputtering of Au, meas. of yield by replication 4=27582
sputtering of Cu, rel. to incident angles 3=19374
sputtering of Cu, Pb, Al, Zn, 1·2 MeV 3=7656
sputtering of K 2=3093
striation formation, time parameter characteristic interpretation 3=19194
thermal cond., at 80°K 0=1576
thermal cond., up to 500°C 0=8711
thermal cond. of mixtures with other inert gases 0=104
thermal conductivity at 23° by bicalorimeter 1=10550
thermal cond. rel. to viscosity 2=11423
thermal conductivity and viscous props. 3=11832
thermal diffusion factor, temp. dependence 1=15948
thermal transpiration at high temps. and $3 \times 10^{-3}-2.5$ mm Hg press. 4=5224
thermodynamic state in shock tube, spectral meas. 4=27527
torch, r.f., spectroscopic and microwave meas. 4=18788
triboluminescence on bubbling through Hg 0=14698
triply-ionized 4=11511
triton range, 0.2-2.7 MeV 3=10180
u.s. absorption 0=14739
u.s. absorpt. 2=7256
in u.s. interferometer, props. 0=6873
u.v. emission in corona discharge 0=1123-4
vacuum pumping, ion, mechanism 3=23946
vapour pressure of isotopes in solid state 1=6067
vapour pressure of isotopic liquid 0=2168, 8654, 14683
vapour pressure of isotopic liquid 1=8262
viscosities, kinematic and diagrammatic, 0 to —183°C, up to 150 atm 2=5031
viscosity, calc., Enskog's dense gas theory and Kirkwood's radial distrib. function 4=14208
viscosity meas. 0=16723
viscosity meas., effect of press. up to 820 atm 4=27214
viscosity meas., oscillating disc. method 3=14189
viscosity, Prandtl number, calc., in presence of ionization 4=18241
viscosity and thermal cond. of mixtures with He and Ne 3=168
velocity, sound, up to 150 atmospheres, 300°C 3=7242
work function, photoelectric, of Mo, Ni 4=568
X-ray absorption coefficients, 2 to 8A, meas. 4=3784
X-ray emission spectrum, Kβ, fluoresc. meas. 4=7147-8
X-ray K-spectra 0=7720
Ar—Ar, potentials from neutral beam elastic scatt. 4=25777
Ar and Ar—Kr mixtures, sec. virial coeff. at low temps. 2=11413
Ar glow discharge, positive column electron and gas temp. 1=16284
Ar—graphite system, adsorption isotherms 2=17070
Ar—methane mixture for ionization chamber 2=20186
Ar—proton elastic scattering at 9.8 MeV 4=30396
$Ar^{36,38}$, cosmogenic, in meteorites 1=18060
$Ar^{36}-Ar^{40}$ solid soln., vapour pressure 72°K to triple pt. 2=9465
Ar^{39} produced by cosmic rays in Fe meteorites 0=4884
Ar^{40} in atmosphere, from K^{40} in earth, and crust development 3=13648
Ar^{41} activity as neutron flux meas. 2=12261
Ar^{41} ion range in amorphous Al_2O_3, WO_3, meas., comp. to theory 4=27580
Ar^{41} diffusion in CaF_2 2=18596

Argon—contd
Ar^+—Ar, resonant electron capture 4=24588
Ar^+ and Ar^{2+}, ionization by electron impact 4=5560
Ar^+ beam, 10-110 keV, bombard. of metals 2=1494
Ar^+ beam, 30-170 keV, sputtering of Cu and Ag 4=22644
Ar^+, bombard. of Cu and Ni (100) faces 3=13020
(Ar^+, Ar) charge transfer 2=22167
Ar^+ efficiency curves by electron impact 1=18761
Ar^{2+} + H, charge exchange cross-section, matrix calc. 4=29871
$Ar^{+,2+}$ ion beam, 10 to 100 keV, det. by nuclear track emulsions 2=20052
Ar^+-ion sputtering of Cu, focused recoil trajectories 3=2049
Ar^+ ions, atomic scattering from metal surfaces, 40 to 80 keV 4=19121
Ar^+ ions, incident on Cu and Al momentum accommodation above sputtering threshold 4=19123
Ar^+ ions on metal surfaces, rel. to secondary electron emission 4=11700
Ar^+, 1-10 keV, sputtering yields of single crystals 4=4103
Ar^+ positive ion stripping and neutralization, 100-450 keV, 4=24568
Ar^+, prod. by electron beams 1=16256
Ar^+, reflection on solid surfaces 1=10744
Ar^+ sputtering of Cu, 5-20 keV 3=4217
Ar^+ sputtering of Cu and Ag, 10-200 keV 3=7655
Ar^+ sputtering of Cu, Ni, Fe, Mo, 100-1000 eV 3=4216
Ar^+, sputtering of Cu (100) surface 3=10703
Ar^+, 10 laser wavelengths, 4500 A to 5300 A 4=19285
Ar^+, structure, effect on electron emission production 1=16391
Ar^{++} single-charge-transfer reactions, cross-sects. 4=8627
ArI, i.r. spectrum, new lines 2=3703
ArI i.r. wavelength secondary std. 2=10207
ArI, line broadening in plasma jet 4=9635
ArII excitation by H^+ and He^+ 3=12770
ArII spark spectra in low-press. plasma 3=7609
ArII spectrum, enhancement by mag. field 2=20744
Ar II Stark broadening in fully ionized plasma 4=18853
Ar II, statistical model, Slater integrals 3=6349
Ar_2^+, binding energy, from A^+—A scatt. data 2=10237
Ar_2^+, formation and stability 3=4004
Ar—BN system, adsorption isotherms 2=17070
Ar—BaO suspension, Ar elec. cond. enhancement, appl. to m. h. d. power generation 4=27224
Ar—Br mixture, diffusion into air and He 2=9310
Ar—Br, A—I, counters, discharge mechanism 2=5506
Ar—CH_4 gas mixture, 2nd virial coeff. 2=15640
with CO_2, acoustic absorpt., 1-5 kc/s, 20-700 torr, temp. depend. 1=180
Ar—CO_2, binary diffusion coeffs. 4=24267
Ar—Cs plasmas, energy density rel. to temp. 4=11633
Ar—H_2 gas mixtures, Raman effect 2=1204
Ar—He, Kirkendall effect 1=176
Ar—He mixtures, viscosity at 20° and 30°C, from 1—50 atm, expt. 4=8242
Ar—He supersonic jet recovery factor > either pure gas 4=27206
Hg—Ar, discharge, low-pressure positive column energy balance 3=19218
Ar—Hg discharges, striation, moving, dispersion rel. 4=16449
Ar—Kr, diffusion of Kr^{85} 3=3822
Ar—Kr, liquefied mixtures, kinematic fluidities 3=1673
Ar—Kr mixture, solid, spec. heat, 12°K to m.pt 1=911
Ar—Kr mixtures, self-diffusion coeffts. ratio 2=11358
Ar—Li scattering, Lennard—Jones potential determ. 4=20131
Ar—NH_3 gas—liquid phase equilibrium 1=18673
Ar—NH_3 mixtures, viscosity 4=18242
Ar—N_2 and Ar—CH_4 liq. solns., surface tension 2=1125
Ar—N_2, Ar—CO_2 mixtures, low-energy electron drift velocity 4=27479
Ar—N_2 mixtures, columnar recombination luminescence 2=9320
Ar—N_2—O_2 discharges, forbidden auroral radiation 4=18708
Ar—Ne discharge, pulsed microwave 3=14537
Ar—Ne discharge in pulsed microwave field, electron density build-up 3=12086

Argon—contd
Ar—Ne mixture, liquid, electron drift velocity 3=21400
Ar—Ne mixtures, electric strength, for pulsed microwave fields 3=5647
Ar+ O liquid–vapour equilibrium 2=22097
Ar–O_2 at 86°K, liquid, excess thermodynamic properties 1=8109
Ar—O_2 mixtures, vib. relax., acoustic resonator meas. 4=11244
Ar–Xe mixtures, solid—liquid phase equil. 1=1848
Xe—A mixture, viscosity and thermal cond. 1=159
C_V meas. near critical pt. 3=1729
H ion production in, by proton beams 2=1386
H_2^+ dissociation in, 200-1200 keV 1=16266
He ions in, electron capture and loss, 200-1500 keV 2=162, 22169
Hg solubility in compressed A 2=5009
N_2 excitation, by metastable Ar, in plasma stream 3=8263
Ne^+—A collisions, energy transfer at 75 keV 1=5981
Si, thin films, prep. by argon ion bombard. 2=841
Argon compounds
Ar—H_2 solid solutions, lattice vibrations 4=3855
ArHg, molecular states, potential energy curves 4=1266
ArHg, vibrational levels, eigenfunctions 4=1267
$ArKr^+$, detection 0=12583
$ArKr^+$, formation in Ar–Kr collisions 0=16971
ArN^+, formation and detection 0=12584
ArN_2^+, formation and detection 0=12584
Arsenic
absorption spectrum in Si 2=23557
characteristic electron energy loss of thin films 1=9998
crystal growth from melt, purification 3=11225
crystallographic angles 4=23457
density meas., m.p. to 1323°K 3=23838
diamag. susceptibility calc. 2=3682
diffusion in Ge, meas. 2=21065
diffusion into Ge from vapour phase 1=7592
diffusion in liquid tin 1=141
diffusion in Si, 1100°-1350°C meas. 3=10689
donors, shallow, valley–orbit splitting 2=8348
dopant in n-type germanium, props. 1=14441
elec. cond., pressure depend., up to 200 000 kg/cm² 1=5001
elec. cond., pressure depend., up to 200 000 kg/cm² 1=11251
electric field gradient calc. 3=8332
electron energy loss spectra 2=3890
epitaxy on monocryst. substrates 2=12896
films, preparation, structure and electrical properties 3=17875
films, work function 2=9612
impurity in Si, energy levels, pressure effects 2=23353
magnetoresistance, nonohmic, low-temp., thermal origin 3=8512
multipole spectrum 4=19949
neutron coherent-scatt. amplitude 3=25201
optical props., 0.5-25 eV meas. 4=13042
phase transitions, up to 70 kbar 3=19067
polycrystalline, mechanism of destruction under stress 0=6314
polymorphism 0=2815
solid solubility in Ge, saturation diffusion expt. 3=3342
u.v. emission spectrum, use for analysis 0=16397
vaporization from porous solid, Knudsen model 3=24118
zinc borate luminescence, activator 2=2254
As^{75} nuc. quadrupole res. in orpiment 4=23079
As^{75}, strength fn., neutron scatt., resonance parameters, spin var., calc. 4=28036
in Ge, interaction with Al 0=1640
in Se as trace element, neutron activation chem. anal. 4=23692
in Zn, radiochemical detm. 3=1399
Arsenic compounds
alloys, superconductivity 3=16873
arsenic oxide, molecular structure and vibrational spectrum 1=2326
chalcogenides, glassy, X-ray structure study 0=21199
chalcogenides, optical props. 0=13609
chalcogenides, vitrification 0=13610
claudetite, As_2O_3, prod. by forced condensation 4=2024
double arsenate of ammonium and thallium, dipolar absorption 1=14535

Arsenic compounds—contd
halides, mol. vibr. calc., XY_3, pyramidal 4=9734
orpiment, rel. to As^{75} nuc. quadrupole res. 4=23079
sulphoarsenides, polyhedra structure 3=18328
$As(CN)_3$, crystal and molecular structure 3=8849
As_2Cd_3, Hall mobility of 36 000 cm²/volt sec. 0=603
As chalcogenides, vitreous and crystalline, structure 4=2135
$AsCl_3$, doping of silicon 2=10478
$AsCl_3$, hybridization and ionic bond nature 1=871
$AsCl_3$, molecules, thermal vibs. 2=8083
$AsCl_3$, soln. in liquid Cl_2, Raman spectrum 1=18414
$AsCl_4$, mean ampl. of vibr. 4=15358
AsD_3, mean vibration amplitudes 1=14000
AsD_3, relax. rel. to vibr. –rot. energy transfer 4=17289
AsF_3, hybridization and ionic bond nature 1=871
AsF_5 liquid, As^{75} n.m.r. 2=11391
AsH_3, force constants and interaction constants 0=20600
AsH_3, AsD_3, molecular props. 0=4187
AsH_3, hydrogen exchange with H_2O, equilib. const. 0=1952
AsH_3, i.r. spectra 2=8095
AsH_3, mean vibration amplitudes 1=14000
AsH_3, relax. rel. to vibr. –rot. energy transfer 4=17289
AsH_3, Urey-Bradley force field 3=22552
As^+H_4 ions in As^+H_4 halide crystals, i.r. spectra 2=8095
AsIn, photoelec. emission characteristics rel. to adsorpt. of BaO 2=1483
AsLi, covalent bonding 2=6247
$AsNa_3$, covalent bonding 2=6247
AsO, AsO^+, u.v. band spectra 1=14051
AsO, band spectrum, rotation analysis 2=18450
AsO, emission spectrum, by heavy current discharge 4=30423
AsO^+, molecular rotation, $A'\Sigma^+ - X'\Sigma^+$ system 2=14250
As_2O_3, condensation behaviour from −196° to 100°C 4=370
As_2O_3 glass, condensation coeff. 0=19509
As_2O_3 polymorphism 0=2815
As_2O_3, Schumann u.v. absorption spectrum 1=17893
As_2O_3, sp. ht. structural props. correl. 0=13490
$(As_2O_3)_2$, condensation, activated, on incandescent gauze, dissociation 4=8521
As_4O_6, nuclear quadrupole resonance of As^{75} 1=12576
10 As_2O_5. 90 M_2O_5 (M = Nb, Ta), tetragonal phase 4=26666
As sulphides, semicond. props. 2=23309
As_2S_3, absorption coeffs. and refl. spectrum 4=7109
As_2S_3, amorphous films, 3 to 8μm, I–V characteristics 3=889
As_2S_3, amorphous, short-range order 0=14048
As_2S_3 and As_2S_3–I glasses, structure 2=17060
As_2S_3 glass, 15-25 μ transmittance 0=6904
As_2S_3, long-wavelength edge absorption 4=17553
As_2S_3 sols, specific heat meas. 0=18443-5
As_2S_3, sols, stability, var. with particle size, colorimetric study 4=10665
As_2S_3, sp. ht. and entropy 0=13491
As_2S_3 wedge, transmittance effects, 2-15 μ 4=20443
As_4S_4, "electron-on-sphere", molecular-orbital model 3=727
As_2S_5, thin film optical filters 0=4404
As_2S_5, viscosity 1=20349
As_2S_3–As_2Se_3 glasses, i.r. absorption rel. to composition 2=18845
As_2S_3—As_2Se_3—As_2Te_3, vitreous, atomic structure, corrections 3=18363
As–S–Br glass, optical and elec. props. 2=14647
As_2S_3–Sb_2S_3, semiconductor props. 0=3263
$As_2(S–Se–Te)_3$ alloys, photo-e.m.f. 2=18731
As–S–Tl glass, i.r. optical constants 2=8479
As selenides, semicond. props. 2=23309
As_2Se_3, amorphous, films, structure 3=13461
As_2Se_3, amorphous layers, photoconductivity 0=6136, 15949
As_2Se_3, crystal, unit cell, space group 3=18364
As_2Se_3, films, elec. and photoelec. props. 2=18692
As_2Se_3 films, photoconductivity storage 4=28638
As_2Se_3, glassy and crystalline states, short-range order 3=10802
As_2Se_3, photoconductivity, rel. to Cu and Ag impurity 4=1677
As_2Se_3, thin film optical filters 0=4404
As_2Se_3-type glasses, far i.r. spectra 3=10930-1
As_3Se_5 thin film optical filters 0=4404
As_2Se_5, viscosity 1=20349

Arsenic compounds—contd
$As_2Se_3-As_2S_3$, semiconductor props. 0=3263
$3As_2Se_3-As_2Te_3$, glass, crystallite detection by electrical conductivity 3=8921
$As_2Se_3-As_2Te_3$, liquids and glasses, elec. cond. 2=17480, 19579
$As_2Se_3-As_2Te_3$, semiconductor props. 0=3263
$As_2Se_3-As_2Te_3$, semicond. props. 2=23309
$As_2Se_3-As_2Te_3$, viscosity 0=12062
$As_2Se_3—As_2Te_3$, vitreous, crystalline (low-temp), atomic structure 3=18364
As_2Se_3, Sb_2Se_3, semiconductor props. 0=3263
As_2SeTe_2 vitreous, elec. cond., effect of impurities 0=15944
$As_2(Se, Te)_3.Tl_2Se$, vitreous, Hall effect 0=15964
$As_2Se_3-Ti_2Se$, semiconductor props. 0=3263
$As_2Se_3. Tl_2Se-Sb_2Se_3. Tl_2Se$, semiconductor props. 0=3263
AsT_3, mean vibration amplitudes 1=14000
AsT_3, wave-numbers, rotational distortion const., thermodynam. props. 0=17741
As tellurides, semicond. props. 2=23309
As_2Te_3, amorphous, films, structure 3=14961
As_2Te_3, crystal structure 3=13456
As_2Te_3 crystal structure, atomic 3=18364
As—Te—I and As—Te—Br semiconducting glasses, Hall effect 4=26029
$As_2Te_3 + Tl_2Se$ systems with Sb_2Te_3, Bi_2Te_3, Sb_2Se_3, thermoelec. 3=10893
$As_2Te_3-Tl_2Se$, $As_2Te_3-Tl_2Te$, conductivity fluctuation, excess noise meas. 0=615
$As_2Te_3-Tl_2Te-As_2Se_3$, elec. and thermal props. 2=21109
$AsYZ_2$ (Y, Z = H, D, T), wave numbers, rot. distortion const., thermodynamic props. 1=6000

Association
acetamide—nitrophenol complexes in benzene, from i.r. spectrum 4=20077
atoms on solid surfaces 0=1968
butanediol-1,3, rel. to dielec. relax. 3=1704
dimethyl ether + SO_2, HCl or fluoroform, from dielectric const. and density, press. var. 4=11258

Atmospheric optics—contd
- intensity and polarization of light scattered from earth and atmosphere 4=17893
- interferometry, over long paths 2=15197
- Ionosphere, depth, large solar zenith distances calc. 4=29322
- light beam attenuation in cloud layer 3=3467
- light of day sky, elliptical polarization 2=876
- light reflection, diffuse, ahd transmission, in nonuniform atmosphere bounded by reflecting surface 4=16243
- light scatter and absorption studies, searchlight for 0=171
- light-scattering by inhomogeneous atmospheres 1=12829
- light scattering by particles in upper atmosphere 4=17921
- light scattering, review 1=4110
- light scattering by semi-infinite atmosphere 1=12830
- light scattering, theory 4=2398
- light signals, nomographic calc. 1=9234
- long-wave radiation from clear skies 4=2197
- long-wave radiation meas. 0=14299
- lower atmosphere, review 4=13799
- measuring instruments 0=4783
- mirage production, solution of wave eqn. 1=1513
- mirages, review 1=7929
- multiple scatt., intensity distrib. and polarization 2=878
- in Nevada Desert atmosphere, transmission and scattering 1=9187
- Nevada desert, transmission and scattering 2=2487
- night sky intensity at 8640 A up to 200 km 3=23627
- nightglow brightness, effect of scatt. 3=16280
- noctilucent clouds, visual and photographic observations 0=21388
- photogrammetric refraction angle rel. to satellite photographing 1=20842
- polarimeter, 2-channel, phtoelectric 0=18590
- polarization of i.r. from clear sky 1=9184
- polarization, of sky light 0=6488, 12202
- polarization of sky light, calc. 3=1445
- radiation refl., ang. and spectral distrib., theory 3=23565
- radiometric measurements, from balloon, instrumentation 2=8972
- rainbow, formation in vertically projected searchlight beam 0=16473
- rainbow, primary, caustic locus 3=9577
- Rayleigh atmosphere, radiation emerging from top 1=6587-8
- Rayleigh scattering and polarization 4=15872
- refraction, effect on satellite angle measurements 2=4600
- refraction, effect on stellar meas. of latitude 1=15213
- refractive index fluctuations in troposphere, light-weight measuring device 1=10548
- refractive index, in and near cumulus clouds 0=21321
- refractive index irregularities, troposphere 3=9051
- refractive index, spatial distrib. up to 3 km 4=26798
- refractivity, apparatus and results 2=15196
- refractivity meas. in lower troposphere 4=4759
- scattering 4=13798
- scattering, by artificial cloud, rel. to ozone thickness 2=11044
- scattering coeff., wavelength and altitude depend. 3=23626
- scattering, effect of lunar atmosph. tide 3=6988
- scattering, high order, in mol. atm. 4=17894
- scattering indicatrice in visual and u. v. spectral region 4=26793
- scattering, isotropic, in semi-infinite atmosphere H-functions 0=19002
- scattering of light in spherical atm. 4=26796
- scattering in lower atmosph., nephelometry 3=6963
- scattering and polarization props. of clouds and hazes in visible and i.r. 4=13793
- scattering props. of an air volume, rel. to aerosol scatt. and polarizing props. 4=15871
- scattering, solar u.v., effect of ozone absorption 0=18518
- scattering, visible and i.r., spectral coeffts. 2=19203
- seeing, telescopic performance of nonuniform atmosphere, transfer function 0=19361
- setting sun, effect of refraction, as seen from space 3=23591
- sky i.r. background 1=20841
- sky light polarization, percentage and direction 3=1447
- solar aurele, applications to atmosphere models 0=18519
- solar i. r. spectrum, altitude variation 4=10721
- spectrographic and interferometric equipment 3=3509

Atmospheric optics—contd
- star scintillation, r.m.s. brightness fluctuation directivity 0=16548
- star scintillation, review 0=4903
- starlight scintillation, atmosph. turbulence model 3=23653
- in stars, photometry, colour, extinction 4=26905
- stellar scintillation 2=2486
- stellar scintillations, balloon-borne camera study 2=21621
- stratospheric slant paths, CO_2 and H_2O transmittances 4=23777
- sun, eclipse, fleeting shadows obs., 15 Feb. 1961 4=29299
- sun, eclipse, shadow bands, 15 Feb. 1961 4=29298
- Sun radiation u. v. limit, daily var. 4=26794
- terrestrial radiation study by cosmic rocket 0=395
- transmission meas., 11–20 km 2=8973
- transmissivity of Elsasser band 3=15322
- transmissivity measurement, using backscattered light from pulsed light beam 1=9188
- transparency, anomalous and "selective", Buger's applic. and reversion effects 3=3466
- transparency, vertical, statistical characts. 4=26797
- troposphere, multiple scattering 0=12710
- turbidity, det. methods and variations 2=2488
- turbidity parameters 4=29296
- upper atmosphere, review 4=13819
- upper atmosphere, solar irrad. scattering 4=13816
- visual range measurement 0=8420
- water mists, near i.r. scattering indicatrix 4=29236
- wavelengths below 2900 A, astrophysical interest 0=4913
- West Ford dipole belt, optical studies 4=7992-3
- window at 10μ, rel. to stellar photometry 4=23860
- window radiation chart for radiating surface temp. meas. 4=23733
- "windows", 0.4-4.0μ, model for attenuation 4=23762
- "windows", at 6.3 and 16–24 μ 2=11025
- visibility, review 4=23756
- visibility, review of early work 4=23757
- visibility, two-cavity range meter 4=23727
- X-ray and u.v. radiation intensity, 60-96 km meas. 4=7880-1
- X-ray and u.v. radiation, satellite meas. 4=15879

Atmospheric pressure and density
- density, diurnal variation at 205 km 4=7871
- density in E region, comparison of estimates 4=2299
- density from grenade glow cloud diffusion, 120-180 km 4=23772
- density model from satellite accelerations 1=15222
- density variations above 200 km, meas. 4=26810
- dispersion of initial disturbance, two model atmospheres 4=2189
- and earth surface tilts, specific case 4=13788
- explosion, 30 Oct. 1961, global effects 3=9036
- isopycnic second level at 80 to 90 km over Churchill, Canada 1=20883
- measurement, instrument for sounding rockets 2=17123
- measurement, with pitot-static tube, 20–80 km 2=2496
- measurement, by rocket, up to 85 km 2=6928
- meas. by satellite drag expts. 4=23773
- mesospheric air density variations 1=20886
- moist air, virtual pressure 4=7825
- night, mass spectr. meas., 100-210 km. 3=25917
- numerical forecast at various levels 3=3452
- parametric representation methods. 3=25878
- 100-500 km, diurnal variation, satellite meas. 4=13817
- pressure meas. at various temps., radiosonde 4=7832
- pulse of large explosion 1=20827
- satellite meas. 4=26823
- scale heights estim. from satellite orbit contraction 4=2220
- stratospheric mass variations, 80°W 4=13812
- and sun flocculi 3=23589
- troposphere, solar-activity effect on pressure 4=2192
- troposphere and stratosphere, diurnal var. 2=17129
- above 200 km, effect of solar wind, from deceleration of Explorer I (1958-62) 3=9068
- upper atm., scale height from satellite orbits 3=3480
- upper, decrease from 1958 to 1962, 150-750 km 4=4781
- upper, density, from satellite orbital data 4=2219
- upper, He thermal diffusion effects 4=26805
- upper, review 4=30936
- upper scale heights, satellite obs. 4=26812
- vars. due to nuclear explosions, period amplitude relation 3=13667
- variations in pressure during lightning 4=7850
- variations rel. to time & solar activity 3=1426

Atmospheric spectra

  scattering of charged particles, at low energy 2=6075
  scattering from Coulomb potentials with exponential screening, total cross-section calc. 0=5865
  scattering cross-sections, extrema in velocity dependence 3=17544
  scattering, effect of electron shells on asymmetry 1=7445
  scattering, elastic rel. to inelastic cross-sections 4=15305
  scattering factors for electron diffraction work 0=16302
  scattering by homonuclear diatomic mols. 3=22611
  scattering, inelastic 3=15302
  scattering, inelastic, of polarized electrons, positrons and μ-mesons 0=9751
  scattering, of light, hydrodynam. and statist. atom model 2=533
  scattering, low-energy atom–atom, dipole–quadrupole and retardation effects 4=28152
  scattering of metastable He in He, N and A 1=3521
  scattering phase shifts, bounds, for compound systems 1=4265
  scattering problems, iteration-variation method 2=22913
  scattering processes, bounds on scatt. phase shifts for static central potentials 0=17252
  scattering processes, review 2=3717
  scattering, "rainbow" effect, interpretation 3=12784
  scattering, resonance, in atomic systems 2=10226
  Schrödinger eqn. for 2-electron atoms, mathematical generalizations 4=25486
  self-ionization and spectra in stars 0=846
  several quanta reson. 4=28098
  short-range forces 4=6512
  single collisions, characteristic energy losses 4=12399
  slow collisions, production of molecular ions 4=30397
  spin-change cross-sections 1=17290
  spin-polarization meas. by optical pumping 1=17274
  split excited state, modulated light scatt., freq. conversion 4=21267
  statistical model, with correlation correction 1=788
  statistical model, correlation correction 3=8172
  statistical model, perturbation calculation 0=7680
  stopping powers, approx. calc. 1=3522
  Thomas–Fermi–Dirac eqn., approx. soln. 2=20733

Atoms—contd
Thomas–Fermi–Dirac, rel. to eqns. of state at very high pressures 3=775
Thomas–Fermi eqn., relaxation soln. 0=7734
Thomas–Fermi model, correction for small distances from nucleus 0=9725
Thomas–Fermi model, diamagnetism 0=5842
Thomas–Fermi theory, classical approx. 3=697
in III-V compounds, polarizabilities, and mol. effective charge 3=17637
3-10 electron, g.s., perturbation energy coeffs. and ionization potentials 2=18397
transition metal ions, crystal field effects on 3d charge densities and mag. form factors 0=9886
transition probabilities, bibliography 3=2547
transitions, two frequency, in combined static and rot. mag. field 4=30371
in transport process systematization 3=5392
trapped at 4°K 0=9776
trapping and energy transfer in collisions with crystal surface 3=8923
two-atom system, non-adiabatic transitions, probabilities 4=17264
two-electron atoms, Schrödinger equation 0=7682
two-electron, and ion interaction, δ-function model 4=17263
two-electron quantum theory, 1925-1930, review 4=12336
units 0=7237
universal potential, theory 4=19923
valence electrons, approx. wave-functions 0=469
van der Waals forces, anisotropy 2=12301
Van der Waals forces between an atom and solid surface 4=12411
vibrational energy exchange 3=2546
vibrational polarization 1=12275-7
vibrational polarization in liquids 1=11754
wave-functions, antisymmetrized product, of N/2 2-electron orbitals 0=20536
X-ray and electron diffr., effects of electron correlation 4=30390
X-ray scatt. factors, function generator 1=15065
X-ray scatt., sum rules involving screening const., self-energy 3=12775
$Z \leq 12$, stopping cross-sections in C 3=22510
Ag, electron affinity, surface ionization meas. 4=18678
Ag, recoil range from (γ,n) reaction 1=4858
Al, oscillation strength 2=10216
Ar and Ar$^+$ in inert gases, collision processes, 5-24 keV, charge exchange, ionization and electron loss cross-sections 1=275-6
Ar beam scattering from Au films, expitaxially grown 4=22323
Ar, charge exchange with Ar$^+$ ions, cross-section, calc. 1=4563
Ar, collision of Ar$^+$ at keV energy, inelastic energy loss 3=709
Ar, collisions, characteristic energy losses 4=12399
Ar, collisions with excited Ba ions, cross-section meas. (no number)
Ar, interaction energy 0=20580
Ar, ionizing collisions, electron energy distrib. 1=4560
Ar–Li scatt., interact. potential eval. 3=15305
Ar–Li scattering, Lennard–Jones potential determ. 4=20131
Ar, $^3P_2$ metastable, polarizability tensor of mag. substrates 4=19948
Ar, polarizability, dependence on atomic volume 0=973.
Ar, polarizability and mag. susceptibility 1=4914
Ar–proton elastic scattering at 9.8 MeV 4=30396
Ar$^+$–Ar potential energy functions 1=818
Ar$^+$ ions in He, Ne, Ar, Kr and Xe, excitation mechanism 1=276
Ar^{8+}, ionization potential, corrected value 3=8214
At, range and straggling in Al and Au, at 4-15 MeV 1=2244-5
Au, Compton scatt. by K-shell electrons 2=528, 20756
Au, electron affinity, surface ionization meas. 4=18678
Au, emission by proton bomb. of crystals 1=1006
Au, photoelectron ang. distrib. from L subshells 4=30389
Au, recoil range from (γ,n) reaction 1=4858
B, polarizability, dipole, calc. 0=9736
Ba ions, excited, collisions with A atoms meas. 2=10223

Atoms—contd
Be, photoelec. K-absorpt. cross-section 3=6350
Br^{79}, produced by Kr^{79} decay, charge spectrum 0=4052
Br, electron affinity 0=17720
Br$^-$, gaseous absorption spectra 3=2565
C, association, in r.f. spark with graphite electrodes 2=166
C, interstitial in graphite, energy 1=12400
Cl^{35,37}, microwave mag. resonance, two-quantum transitions 2=22903
C I, photoionization cross-section 4=18677
C, photoionization cross-sections, calculation 4=25543
C, polarizability, dipole, calc. 0=9736
C, stopping power for 1.1 MeV protons, ratio in graphite and diamond 1=12349
C I, transition probabilities 3=702
C to U, Ag Kα and Co Kα X-ray scattering dispersion corrections 4=3813
C$^-$ bound free continuum 1=5963
C$^-$, photodetachment cross-section up to 3eV 4=12387
Cl$^-$, gaseous absorption spectra 3=2565
Ca, Ca^{2+}, electronic polarizability 0=7698
Cl and Cl$^-$, X-ray scattering factors 1=17285
Cl–Cl, Cl–Cl$_2$ collision cross-sections 1=11068
Cr^{3+} in ruby, absorption, light, polarized, for each ground sub-level 4=7123
Cs, atomic clocks 0=14480
Cs, charge exchange with Cs ions 1=11915
Cs, collisions between excited and ground-state atoms 2=22900
Cs, elec. charge, upper limits 3=10091
Cs^{133}, spin-exchange collisions, e.s.r. meas. 4=25591
Cu, electron affinity, surface ionization meas. 4=18678
Cu^{65}, L fluorescence coeffs. 2=14213
Cu, recoil range from (γ,n) reaction 1=4858
Cu, secondary emission from Cu targets, under 15 keV Ar$^+$ bombard. 4=17457
Cu, sputtered from Cu by Ar$^+$ 4=14769
Cu, sputtered by 80-1200 eV ions, energy distrib. 4=24754
Cu, Thomas–Fermi–Dirac eqn., approx. soln. 2=20733
D, neutron scatt., upper bounds on scatt. length 0=5863
D$^+$ scattering in D gas 0=4168
Eu, Kα X-rays from radioactive sources 4=9665
F, F$^-$, X-ray incoherent scatt., functions 0=4620
F, polarizability, dipole, calc. 0=9736
F$^-$, polarizability, rel. to dielectric const. of LiF 0=10011
F$^-$, polarizability and London force consts. 4=3790
Fe^{3+}, antishielding factor, calc. 1=795
Fe transition series, atomic scatt. factors 1=19606
Ga^{71}, L fluorescence coeffs. 2=14213
Ga, oscillator strength 2=10216
Ga, scattering on inert gases 1=13969
Ga, van der Waals forces, anisotropy meas. 2=12301
Gd, Kα X-rays from radioactive sources 4=9665
Ge, X-ray incoherent scatt. functions 0=4620
Ge, X-ray scatt. factor, rel. to solid, theory and expt. 1=11559
H, atomic polarizability and nuclear shielding factor, calc. 1=5961
H, bound state with positron discounted 1=4263
H, charge exchange in gases 0=19623
H, charge exchange, with O$^+$, He^{2+}, P 2=16795
H, charge exchange, resonance 2=16493
H, charge exchange, resonance 3=6361
H, charge transfer in H–H$^+$ low energy collisions 4=15303
H, coherent scattering of light, calc. 3=4715
H, collisions with electrons 0=2716
H, collisions with electrons, Lα excitation near threshold 0=1475
H, collisions with H$^-$, charge transfer and electron production cross-sections 0=13409
H, collisions with H$^+$, ionization and charge transfer cross-sections 0=13408
H, collisions with ions, prod. of Lyman-α radiation 3=6366
H, collision with μ-mesic H atoms 2=11492
H, collisions with nuclei 1=19575
H, collisions with nuclei 3=4701
H, collisions, spin-exchange, models 4=25586
H, in crystals, potential distrib., thermal motion effects 4=30830
H, diffusion in A–H$_2$ mixtures 0=5050
H, drift velocity of electrons in H 0=5861
H, e.p.r. linewidths 1=3510

Atoms—contd

H, eigenfunctions, parabolic and spherical, relations between 0=13390
H, eigenvalue relations 2=4932
H, electron capture cross-section, impulse approx. 4=9678
H, electron capture and loss in H_2, cross-sections 0=11502
H, electron capture by protons 3=12781
H, electron capture by protons, distorted wave method 0=5869
H, electron capture by protons, into excited states 2=12299
H, electron loss and capture, in NO and CO 4=463
H, excited, electron impact ionization calc. 4=12392
H, excited, ionization by strong elec. fields, meas. 4=11530
H, excited states, proton inelastic cross-sections 4=3814
H—H collisions, exchange, density matrix 4=6507
H-H^+ collisions, resonant electron capture 2=3715
H-H^+ system, induction and dispersion energies 2=3714
H-H_2 short-range interaction 0=4244
H and He, interactions, energy calc. 0=7716
H, hot, reactions with propane, butane, butene -1, kinetic theory analysis 4=30395
H and inert gases, van der Waals forces between atoms 1=17289
H, interaction of a ^2S and a ^2P atom at large distances 1=817
H, ionization by slow electrons 0=1101
H-like, forbidden transitions, rel. to nuclear quad. moment 3=2556
H, linear chain, antiferromagnetism 1=12262
H, long-range interaction between two 1s atoms 0=20687
H, metastable 2s state, quenching by laser beam 4=9655
H, nl state, electron impact ionization calc. 4=12388
H, optical polarizability calc. 4=3776
H, ortho—para conversion, in surface mag. meas. 3=1128
H—p scattering, rearrangement collisions 3=4722
H, photoelectric effect with large momentum transfer, calc. 1=11078
H, polarizabilities and nuclear shielding factors, calc. 1=5961
H, polarizability, meas. in Ar—H_2 shock tube 4=9628
H, polarization by adsorption on ferromagnetics 1=13970
H, polarization in H_2^+ 2=14315
H, polarization by point charges 0=20544
H^-, positron binding and annihilation 2=10227
H, production cross-sect., by proton capture 3=4717
H, prod. of $H^-(1s^2)$ by atom collisions, calc. 0=5860
H, reaction with H_2, H_3 activated complex formation, calc. 0=1514
H, reactions with N_2H_4, NH_3 and N_2O 2=23952
H, recomb. to H_2, e.s.r. study 2=16494
H, recombination on surfaces, catalytic efficiencies 2=1969
H, resonance charge exchange of protons 1=17291
H(1s), resonance charge transfer with H^+, calc. 1=19607-8
H, scatt. of low-energy ortho-positronium, calc. 1=13403
H, scattering of positrons, low-energy, calc. 0=4167
H, scattering of positrons, positronium formation 0=5550
H, scattering of protons, impact parameter treatment 1=7446
H, spin flip, collision-induced 0=473
H, Stark effect, calc. 2=20740
H, stopping power for proton, neutral H and H^- beams 0=9755
H, storage technique 2=10225
H, system of 3, London—van der Waals forces, non-additivity 0=11506
H, trapping sites in rare gas matrices 0=7889-90
H, two, asympt. exchange coupling 4=19990
H^- bound—free absorption coeff. 4=25482
H^-, photodetachment cross-section, spectral depend. 0=2714
H^- photodetachment, empirical analysis 3=19180
H^+—H collisions, electron capture theory 4=12405
H^+—H(1s) collisions, resonant charge transfer, continuum distorted wave approx. 4=22324
He—α collisions, two-electron exchange 4=9633
He, atomic polarizability and nuclear shielding factor, calc. 1=5961
He-beam scattering from Au films, epitaxially grown 4=22323
He, charge, residual, search for 1=2307
He, collision with ions, prod. of Lyman-α radiation 3=6366
He, collision of two, Born approx. calc. 3=710
He, continuous photoelec. absorption cross-section 2=529

Atoms—contd

He, cross-section and wave-functions for X-ray scatt. 1=3518
He, drift velocity of electrons in, cross-section for momentum transfer 0=5862
He, electron capture by α-particle passing through 3=9720
He, electron capture by He^+ ions 4=19995
He $(1s^2)$, electron capture by protons 3=15304
He, electron impact, He^{2+} formation, cross-section 0=14968
He, energy calc., improved Hylleraas method 0=11486
He, ground-state interaction, variational calc. 2=6108
He, ground state, repulsion calc. by MO approx. 2=10221
He—He interaction energy calc. at short range 4=19993
He—He interaction energy in ground state, calc. 0=15676
He—He interaction, between 0.55 and 1.0A 2=10220
He and He-like ions, X-ray scattering factors 1=17286
He—He repulsion 3=10508
He—He repulsive energy calc. 4=19992
He—He Rosen interaction potential 3=10507
He—He scatt., nonadiabatic effects at high energies 4=1228
He, interaction energy with H_2, calc. 3=17622
He, interaction between two normal atoms 0=13452, 15677
He, ionization of He, Ar, H_2 and N_2, 15-180 keV 4=2944
He, ionizing collisions, electron energy distrib. 1=4560
He-like ions, X-ray scatt. factors 1=17287
He-like, quadrupole polarizability and nuclear shielding 0=20545
He-like, 2^3S_1 state, mag. suscept. calc. 4=28113
He, metastable, de-excitation by collisions with atoms, cross-sections 2=22894
He^3, nuclear mag. relaxation process 2=22896
He, octupole forces between two atoms 1=5980
He, polarizabilities and nuclear shielding factors, calc. 1=5961
He, polarizability, dipole and quadrupole, calc. 0=9729
H^-e^+, positron annihilation from ground state, calc. 2=18406
He, primary specific ionization 1=8305
He, repulsive potential btwn. 2 normal atoms 0=9756
He scattered on He, scattering cross-sections, calc. 4=12402
He^4, three-body bound state, binding energy 3=25109
He, 20 keV bombard. of W, surface damage 4=15511
He, 2^3S_1 state, mag. suscept. calc. 4=28113
He, X-ray scatt. factors, Schwartz method 3=10445
He^+—Ar potential energy functions 1=818
He II, departure from Saha equation 1=5968
He^+—He potential energy functions 1=818
He^+—He scatt., large-angle, resonance charge exchange at keV energies 0=474
He^+—Ne potential energy functions 1=818
He^3, singly ionized, table of energy rel. to mag. field strength and orbital radius 4=25212
Hf, Kα X-rays from radioactive sources 4=9665
Hf III, Slater parameters 3=703
Hg, collision processes with foreign gases 0=17691
Hg, collisions with N_2, rel. to Hg reson. fluoresc. quenching 4=22304
Hg, γ-ray Rayleigh scatt. by K-electrons 3=8213
Hg, h.f.s. effect on imprisonment of resonance radiation 0=2729
Hg, K-shell ionization, by fast electrons 1=2302
Hg, photon elastic scatt., polarization, calc. 0=17692
Hg^{201}, quadrupole relaxation on quartz walls 4=6493
Hg, $6(^3P_1)$, electrophilic character, in photosensitized reactions 3=25053
Hg, small-angle scatt. on, by alkali atom beams 0=2723
Hg^{2+}, electronic polarizability, calc. 0=1466
I, electron affinity 0=17720
I, electron affinity 2=22905
I, recomb. to I_2 in NO, rel. to concn. 3=2668
I, recombination in foreign gases 0=5868
I^+—Hg collision, near-resonance charge transfer process 4=22325
In, surface ionization on W 1=4568
K—Cl_2 and K—HI, collision cross-sections 2=532
K, elec. charge, upper limits 3=10091
K, ionization in adsorbed state 1=3019
K, reson. charge exchange, with K ions 1=13070
K, scatt. by various atoms and mols. 3=4788
Kr, charge exchange with Kr^+, at 3-7 keV, cross-section 2=160

Atoms—contd
- Kr—Kr molecular interaction 1=17288
- Kr—Li scatt., interact. potential eval. 3=15305
- Kr—Li scattering, Lennard—Jones potential determ. 4=20131
- Kr, polarizability and mag. susceptibility 1=4914

$Am^{[illegible]}$, h.f.s. [illegible]
$Am^{[illegible]}$ by at. beam. 1=[illegible]
Ar, atomic scatt. factor, rel. to theory 4=[illegible]
Ar, Thomas—Fermi—Dirac eqn. solution 1=[illegible]

Atoms—cont.
structure—cont.
Ar, transition probabilities of lines, giving excitation temp. 4=1302
Ar II, energy levels, anal. 0=15638
Ar II, statistical model, Slater integrals 3=6349
Ar^+ metastable states near Ar^{2+} threshold 4=1222
As, Hartree—Fock wave-functions 2=516
As^{75}, $^4S_{3/2}$ state, h.f.s., by atomic beam mag. resonance 1=8564
Au, energy levels, photo-electron method 4=19985
$Au^{195,199}$ hyperfine-structure separations 4=25499
Au, "universal potential" method 1=19677
B, exchange polarization effects in h.f.s. 1=12238
B, ground-state wave-function and energy 1=6080
B, $1s^22s2p^2$ configs., analytic self-const. field functions 4=15273
B, hyperfine consts. calc. 1=22698
$B^{10,11}$, $1s^22s^22p\,^2P_{3/2}$ state h.f.s. 1=10411
B^-, electron affinity and stability calc. 4=9643
B^{3+}, isotope shift, open-shell calc. 3=10456
B^{3+}, 1^3S state, twenty-parameter calc. 3=2591
Ba, L levels, measurement 4=18951
Ba, oscill. strengths of principal spectrum 2=14100
Ba, 6^3P_1 state lifetime 1=4931
Be, configuration interaction calc. 1=8687
Be, correlation energy from N-electron wave-function 1=764
Be, electron pairs 3=11764
Be, electronic energy calc., electron phase wave spinor theory 4=8766
Be, exchange polarization effects in h.f.s. 1=12238
Be, generalized product functions 3=10449
Be, ground-state energy calc. from Hylleraas wave-function 1=10455
Be, ground state energy by variation—perturbation calc. 4=16019
Be, $1s^22s2p^3$ configs., analytic self-consist. field functions 4=15273
Be, polarizabilities and shielding factors, perturbation calc. 4=16061
Be, $2p^2$ shell energy 1=2271
Be, wave-functions approx. 0=13391
Be^{2+}, S-states, variational calc. 3=21471
Be^{2+}, 1^3S state, twenty-parameter calc. 3=2591
Bi, energy levels, photo-electron method 4=19985
Bi^{205}, h.f.s. 1=2238
Bi isotopes from internal conversion lines 1=5373
Bi, μ-mesic 2P — 1S transitions, theory 4=5622
Bi^{210} RaE, h.f.s. 1=5465
Br and Br^- Hartree-Fock wave-functions 2=516
Br, doubly ionized 1=19567
Br, electronic g-factor 1=5651
Br, L levels, measurement 4=18951
Br, theory 1=11788
Br^- ion, radial wave-functions, determ. 4=1785
Br^-, quadrupole antishielding factor calc. 4=1791
Br^-, TFD model with correlation correction 0=17647
C, $1s^22s2p^3$ configs., analytic self-consist. field functions 4=15273
C^-, bound states rel. to phase shifts 4=19989
C^-, electron affinity and stability calc. 4=9643
C^- and photodetachment spectrum 1=6068
Ca, $4s4p\,^3P_1$ state, g_J factor meas. 3=2564
Ca, K-shell electron density and K-level 2=14206
Ca^+, orbitals radii calc. 1=20214
Cd^{111}—Cd^{113} hyperfine anomaly 1=2611
Cd, $5s5p\,^3P_1$ state h.f.s. meas. 4=17244
Cd, $5s5p\,^3P_1$ level g_J meas. 4=19954
$Cd^{107,109}$, $5s5p\,^3P_1$ state level crossing obs. 1=14191
$Cd^{111,113}$, $5s5p\,^3P_1$ state level crossings 4=5736
Cd^{107}, $(5s5p\,^3P_1$, state, Zeeman and hyperfine 4=3537
$Cd^{111,113}$, $^3P_1$ state, h.f.s. 0=17664
Cd, L-level energy shifts due oxidation and alloying 0=7690
Ce^{3+}, elec. quadrupole interact., rel. to anti-shielding 4=1118
Cl, antishielding of mag. and elec. hyperfine interact. 3=15098
Cl, electronic g-factor 1=5651
Cl, exchange polarization effects in h.f.s. 1=12238
Cl, from microwave Zeeman spectrum 1=11056
Cl I, ^4P of levels 1=5964

Atoms—contd
structure—contd
Cl^-, lowest config., Hartree—Fock calc. 4=12377
Cm, trivalent, energy levels, low-lying 4=15275
Cm^{3+}, electronic energy levels, theory and expt. 4=22310
Co^{59}, h.f.s., rel. to nuclear quadrupole moment 1=7437
Co II, d^7 p config. 1=806
Co^{2+}, orbital degeneracy, magnetoelastic energy 0=3066
Cr, electron density, by X-ray scatt. 4=13588
Cr, and excited states, self-consistent field calc. 4=9641
Cr^{53}, h.f.s. meas., mag. -dipole interaction 4=6470
Cr, Q correction for $3d^n4s^k$ configuration of second spectrum 0=13414
Cr II, d^4 p config. 1=806
Cr^+, self-consistent field calc. 4=9641
Cr^{3+}, spin level splitting, Jahn—Teller effect 3=10452
Cr V, $(3d)^2$ config., multiplet, effect of electron correl. 4=15274
Cr^{n+}, analytical self-consistent-field functions 4=28122
Cs, D level hyperfine structure 1=17260
Cs, energy levels 2=22899
Cs, $(F = 4, m_F = 0)-(F = 3, m_F = 0)$ transition, freq. to 1:10″ 1=1725
Cs^{133}, h.f. frequency as time standard 1=15776
Cs^{134m}, h.f.s. 2=16477
Cs, L levels, measurement 4=19951
Cs, model, for ionization transients 3=24219
Cs, oscillator strengths, calc. 2=18416
Cs, radial wave functions for 26 orbitals 4=28121
Cu, electron radial distrib. 3=19934
Cu, excited states, spin—orbit coupling 4=15270
Cu, ground and several excited states 3=22476
Cu, X-ray atomic scatt. factor, abs. meas. 1=7433
Cu^+ to Kr^{8+}, ground-state wave-functions 1=12241
Cu^+, second-order quadrupole effect for nuclear hexadecapole coupling 2=18396
D, α^3 corrections to h.f.s., calc. 1=3505
D, hyperfine anomaly, theory 1=801
D, h.f.s., precise det. by e.s.r. 0=20543
D, Lamb shift 1=7425-6
Dy, electronic ang. momentum, g-value and ground-state assignment 1=9900
Dy^{3+}, free, in cryst. field and in ext. mag. field 3=8377
Er, electronic ang. momentum, g-value and ground-state assignment 1=9900
Er II, energy levels 3=10453
Er^{169}, h.f.s. meas. 3=22479
Er II, low-lying levels 2=10201
Er(IV), composition of electronic states 1=3504
Er^{3+}, free, in cryst. field and in ext. mag. field 3=8377
Eu, ground state g-value 1=13947
$Eu^{151,153}$, h.f.s. of ground state 1=803-4
Eu^{152} (13 yr) 3=7968
Eu II 0=17706
EuII, levels and g-sum rule 4=12367
F, exchange polarization effects in h.f.s. 1=12238
F, F^-, wave-functions and correlation energies 1=5965
F^{19}, h.f.s., unrestricted Hartree—Fock calc. 3=12760
F, from microwave Zeeman spectrum 1=11067
F, $1s^22s2p^k$ configs., analytic self-consist. field functions 4=15273
F, wave functions and correlation energies 4=3789
F^-, electron affinity and stability calc. 4=9643
F^-, ground-state wave-functions 1=13930
F^-, Hartree—Fock s.c.f. wave-functions 2=515
F^-, quadrupole antishielding factor calc. 4=3791
F^+, $1s^22s^23p^3nl$ config., coupling schemes calc. 4=1190
Fe^{57} in compounds and alloys, s-electron density 3=2699
Fe, d- and f-electrons, in crystalline fields, X-ray and neutron scatt. 0=12028
Fe group, α and β parameters 1=12249
Fe-group, Kβ'-line origin 1=13941
Fe-group, oscillator strengths 0=20590
Fe-groups, 3d wave-functions 0=2710
Fe, K-shell electron density and K-level 2=14208
Fe, number of 3d electrons 0=20768
Fe, Q correction for $3d^n4s^k$ configuration of second spectrum 0=13414
Fe, scatt. factor for outer electrons in Fe_3Al 0=1915
Fe series atoms and ions (Sc to Cu), Hartree—Fock calculations 0=9737
Fe series, Hartree—Fock calcs., Ti through Zn 0=17657

Atoms—contd
structure—contd
Fe series, singly negative ions, Hartree—Fock calc. 4=28124
Fe, X-ray atomic scatt. factor, abs. meas. 1=7433
Fe II, d^6 p config. 1=806
Fe^{2+}, antishielding of mag. and elec. hyperfine interact. 3=25038
Fe^{2+}, in $FeCl_2$ 2=12397
Fe III, nonlinear effects in theory 3=8185
Fe^{3+}, Sternheimer factors, variational calc. 3=2567
Fe^{3+}, $^6S_{5/2}$ state, nuclear quad. splitting in solids 3=8336
Ga and Ga^+, Hartree—Fock wave-functions 2=516
Ga^{68}, h.f.s. separations 2=18418
Ga, spectral line calc. 1=4897
Gd, electronic structure, coupling 3=12761
Gd^{+++} absorption bands, oscillator strengths 3=19935
Gd^{3+}, h.f.s. for Gd^{156} 89 keV state 3=628
Gd^{3+}, h.f.s. const. of Gd^{154} first 2^+ state in aq. soln. 1=4826
Gd^{3+}, S-state, crystal-field splitting 1=7517
Gd^{3+}, spin-polarized Hartree—Fock calc., mag. interactions 1=7524
Ge, by Hartree—Fock self-consist. field 4=19956
Ge and Ge^{2+}, Hartree—Fock wave-functions 2=516
Ge^{71}, h.f.s. of ^3P ground state 3=17390
Ge, p^2 config., electronic g factor meas. 4=15278
H, α^3 corrections to h.f.s., calc. 1=3505
H, bound-state energies, rel. to plasma 2=5332
H, diamag. susceptibility and shielding calc. 1=5957
H, diamagnetism, continuum contribution importance 4=22354
H—e system, total wave-function 3=22501
H, e.m. interactions, parity nonconservation and time reversal invariance 0=11485
H, electronic energy levels, perturbation caused by proton structure 4=25479
H^-, electrostatic polarizability, calc. 1=12242
H, energy levels 1=18278
H, energy levels in mag. field, quasi-classical calc. 2=2602
H, fine structure det. from resonance fluorescence 1=8810
H, at 5000-20 000°K 2=13371
H, Gaussian wace-function calc. 0=20655
H, ground-state dispersion formula, integral representation 1=4898
H, ground state hyperfine separation 4=3777
H, hyperfine splitting 2=18407
H, ground-state h.f.s. 2=6102
H, h.f.s., correction formula, from assumed p and e electric dipole moments 1=3180
H, h.f.s., meson corrections 0=466
$H^{1,2,3}$, h.f.s., precise det. 0=7725
H, h.f.s. precise det. by e.s.r. 0=20543
H, integral representation of dispersion formula 0=15639
H, Lamb shift 1=7425-6
H, Lamb shift, consequences of zero-mass pseudoscalar meson 4=24989
H, Lamb-shift, finite mass of proton 2=16469
H, Lamb shift of $3^2S_{1/2}$ state, meas. 1=19583
H negative ions, electron—electron and electron—nuclear energies 4=1178
H, nuclear magnetic-shielding, by elec. field-gradient, and by cage 1=13926
H, one-dimensional 0=463
H +p system, effect of van der Waals forces 1=7427
H, parity impurities due to weak electron interact. 4=5957
H, radial eigenfunctions by Laplace transform 4=17241
H, Schrödinger eqn. solution 2=10195
H, Stark effect 1=7427
H, Stark effect theory 2=6089
H, 2S state, lifetime 0=1467
H-type one-electron Hartree parameters 4=1200
H wavefunctions, convergence 4=3775
H, wave-functions, Gaussian expansion 3=25042
H, weak interaction effects on energy levels 1=4899
H^-, binding energy from photodetachment cross-section 4=9629
H^-, bound-free absorption coeff. 3=2557
H^-, oscillator strengths, sum rules 2=20741
He, approx. wave-function, appl. to electron scatt. 1=3519
He, autoionization levels 4=12356

- $BaAu_5$, in Ba—Au films on W 1=15174
- BaB_6, semiconducting props. and electron requirements 3=8330
- $Ba_2B^IB^{II}O_6$ type, unit cells 3=16077
- $Ba(B'_{0.33}Nb_{0.67})O_3$, B′ any divalent metal, crystal structure 4=4619
- $BaB_{0.5}Re_{0.5}O_3$ (B = Ca, Mg, Mn, Fe, Co, Zn, Cd), prep. and mag. props. 1=14694
- $BaBi_3$, superconducting, crystal structure 2=10905
- $(Ba, Bi)FeO_3$, dendrites, composition 3=3277
- Ba—Bi ferrite magnet, sintering 1=20113
- $Ba_2Bi_4Ti_3O_{18}$, ferroelec. and cryst. props. 2=12570
- $Ba_2Bi_4Ti_5O_{18}$, and substituted cpds, ferroelec. phase transitions 4=23255
- $BaBr_2$, crystal structure by X-ray diffraction 4=7608
- $BaBr_2 . 2H_2O$, nuclear quadrupole resonance 2=8693
- $BaBr_2 . 2H_2O$, proton resonance 2=6709

Barium compounds—contd

$BaBr_2 . H_2O$, proton resonance, structure det. 0=16190
$BaBr_2 . 2H_2O$, proton spin–lattice relaxation 2=18970
$Ba_3Br_4F_2$, phosphorescence, effect of ultrasound 1=5056
Ba bromate monohydrate, proton resonance 1=3931
$BaCO_3$, aragonite structure, out-of-plane bending of the CO_3 ion 3=25189
$Ba(Ca_{0 \cdot 33}Ta_{0 \cdot 67})O_3$, crystal structure 4=4597
$BaCl_2$, crystal structure by X-ray diffraction 4=7608
$BaCl_2$, dielectric const., density var., 9200 Mc/s 4=22758
$BaCl_2$, e.s.r. of Mn^{2+} 1=14802
$BaCl_2$, effect as impurity in KCl crystals 0=11627
$BaCl_2$, ionic melt, electromigration, 790°-1060°C 2=15144
$BaCl_2$, liquid-state structure 0=19114
$BaCl_2$, phase transformations, heat of fusion 4=8501
$BaCl_2$, aq., Soret effect at 25°C 2=7200
$BaCl_2 . 2H_2O$, dehydration and co-electron emission 0=15050
$BaCl_2 . 2H_2O$, neutron diff. crystal structure meas. 4=29147
$Ba(ClO_3)_2$ hydrate, zero-field proton mag. reson. 2=8687
$Ba(ClO_3)_2 . D_2O$, deuteron mag. reson., quadrupole splitting 3=25589
$Ba(ClO_3)_2 . H_2O$, H_2O molecular motion, rel. to n.m.r. 4=6692
$Ba(ClO_3)_2 . H_2O$, n.m.r. line splitting, effect of H_2O mol. vibration, theory and expt. 4=23059
$Ba(ClO_3)_2 . H_2O$, proton spin–lattice relax. rel. to orientation and temp. 4=23071
$Ba_2Co_2Fe_{12}O_{22}$, microwave ferromag. resonance 0=3110
$BaCo_y Fe_{18-y}O_{27}$, hexagonal, magnetocrystalline anisotropy 3=1029
$BaCo_xFe_{18-x}O_{27}$, $(0<x<1.5)$ single crystals, magnetocrystalline anisotropy 4=26336
$BaCoO_2$, crystal structure 0=8215
$BaCo_xTi_xFe_{12-2x}O_{19}$, etc., ferrimag. anisotropy 2=8658
$BaCrO_4$, radiation damage effects 3=13016
Ba–Cu, work function 1=13097
BaF_2, capture levels and recomb. nature of thermoluminesc. 4=28728
BaF_2, cohesive and surface energies, calc. 2=6245
BaF_2, colouration spectra 3=2837
BaF_2, crystal growth, Czochralski method 1=14990
BaF_2, crystal internal charge compensation by interstitial F^-, e.s.r. obs. 4=22460
BaF_2 crystals, transparency 2=6555
BaF_2 doped with Sm^{2+} ions, fluorescence and absorption spectra 4=17582
BaF_2, e.s.r. of Gd^{3+}, effects of heat treatment, hydrolysis 4=1877
BaF_2, e.s.r. of Gd^{3+}, meas. analysis 4=4407
BaF_2, e.s.r. of U^{4+}, charge compensation 3=3180
BaF_2, elastic consts., 4.2-300°K 4=28937
BaF_2, elastic and thermoelastic props. 3=18161
BaF_2, electron spin resonance of Mn and Gd impurities 3=11111
BaF_2, Er^{3+} and Yb^{3+} absorption and luminescence spectra 3=3000
BaF_2, Eu^{2+} e.s.r. 4=1874
BaF_2, Eu^{2+}, Sm^{3+} impurities, electron phototransfer 3=951
BaF_2, film, as hygrometer element 0=16414
BaF_2, fusion heat and entropy meas. 2=9463
BaF_2, growth of highly-perfect single crystals for masers 3=23397
BaF_2, i.r. reflectivity and transmission 2=21236
BaF_2, i.r. spectral transmittance between 27° and 1000°C 4=10178
BaF_2, luminescence spectra 0=10066
BaF_2, luminescence spectra 1=2455
BaF_2, Na^{23} and F^{19} n.m. relax., mechanisms 2=8680
BaF_2, photoelasticity 3=916
BaF_2, pressure induced colour centres 1=4995
BaF_2, Raman spectrum 3=23065
BaF_2, reflectivity, reststrahlen bands 2=2218
BaF_2, refractive index meas., temp. depend. 4=7092
BaF_2, refractive props., 0.2652-10.346μ, 25°C 4=17554
BaF_2, spin–lattice relax. of Er^{3+} 1.6°-25°K 4=30732
BaF_2, surface energy of $\{110\}$ face 3=22632
BaF_2 thin film, far u.v. reflection, rel. to thickness 4=13004
BaF_2, U-activated, luminescence, "relaxation spectra" 3=3035
BaF_2, U^{4+} e.s.r. and charge compensation 4=26439
BaF_2 : Er, i.r. quantum counter action 4=22872
BaF_2 : Ho, Er, absorption and emission spectra of Ho^{2+} and Er^{2+} 4=13038

$BaF_2 : Sm^{2+}$, absorpt., luminescence spectra 2=21242
$BaF_2 : Sm^{2+}$, luminesc. and absorpt. 2=14717
$BaF_2 : Sm^{2+}$, luminescence kinetics 3=4986
$BaF_2 : Sm^{2+}$, vibronic spectra model 4=13085
$BaF_2 . 2FeO . 5Fe_2O_3$, ferrimagnetic props. 0=10181
$BaFe_{12-2X}Ir_XZn_XO_{19}$, linewidth, rel. to composition 3=15878
$Ba(Fe_x Nb_2)O_3$, crystal structure 4=10549
$BaFe_{12}O_{19}$, anisotropy distrib. by remanent torque technique 2=12723
$BaFe_{12}O_{19}$, ferrimag. linewidth 1=14779
$BaFe_{12}O_{19}$, ferrimagnetic resonance in mm wave region 1=14780
$BaFe_{12}O_{19}$, ferromagnetic domain observation by Faraday effect 1=20090
$BaFe_{12}O_{19}$, ferromag. domains, microscopy 3=20589
$BaFe_{12}O_{19}$ ferromagnetic resonance 3=20634
$BaFe_{12}O_{19}$, magnetic anisotropy, effect of F-compensated Co^{2+} 3=15877
$BaFe_{12}O_{19}$, mag. domain structure 1=14714
$BaFe_{12}O_{19}$, mag. nucleation near dislocations 3=5009
$BaFe_{12}O_{19}$, monocrystal plates, ferromagn. domain configuration 0=8049
$BaFe_{12}O_{19}$, remanent domain structure 2=14779
$BaFe_{12}O_{19}$, resonance props. 2=14818
$BaFe_{12}O_{19}$ thin layers, domain width rel. to temp. 3=1014
$BaGa_2O_4$, structure 0=18356
$BaGeO_3$, crystal structure at high temp. 3=1300
$BaHfO_3$, effect on ferroelec. nonlinearity of $BaTiO_3$ 2=4095, 8464
BaI_2, crystal structure by X-ray diffraction 4=7608
Ba–K Fe garnet, magnetic exchange anisotropy 4=13230
$BaLi_{2X}Al_{2-2X}Fe_{4X}O_{4-4X}$, ferroelec. props. 1=1137
$BaLiPO_4$:Cu, luminesc. and cryst. struct. 2=8578
$Ba_2(MRe)O_6$, M = Mn, Fe or Co, preparation and mag. props. 1=6376
$Ba(M, Ti)O_3$, hexagonal crystal structure 1=15100
Ba_2Mg_{17}, crystal structure 3=20837
Ba_2Mg_{17}, crystal structure, atomic, and Mg substitition solution on superlattice 3=20838
$BaMnO_2$, crystal structure 0=8215
$BaMnO_3$, cryst. struct. 2=10889
BaN_6, u.v., spectral and photoelec. props. 3=25450
$BaNO_3$ lattice frequencies, rotational barriers 2=16835
$Ba(NO_3)_2$, aqueous soln., compressibility 0=14640
$Ba(NO_3)_2$, elastic and thermoelastic props. 3=18161
$Ba(NO_3)_2$, heat of fusion 2=17689
$Ba(NO_3)_2$, magneto-optic studies 0=2934
$Ba(NO_3)_2$, NO_3^- vibrations rel. to overtone and combination bands 4=10163
$Ba_6Nb._{28/3}Ni_{2/3}O_{30}$, ferroelec. props. 2=666
$Ba(Nb,Ta)_2O_6$–$Sr(Nb,Ta)_2O_6$, diffuse phase transitions, relax. polarization 1=6195
Ba–Ni cathodes, evaporation during operation 2=3068
$BaNiO_2$, mag. structure, neutron diffn. analysis 4=29102
$Ba(NiW)_{0.5}O_3$, phase transitions 3=8864
BaO, $A^1\Sigma$–$X^1\Sigma$ system, in C arc, vibr. temp. 4=22347
BaO, $A^1\Sigma$–$X^1\Sigma$ system, intensity distrib. 4=15328
BaO, absolute magnetization 0=13829
BaO, adsorbed on Cs_3Bi, photoelec. props. 1=13111
BaO, absorption edge, relationship with lattice energy 1=3836
BaO, adsorption on metal films, elec. cond. effects 2=621
BaO, adsorption on Ni films, effect on elec. resist. 3=20271
BaO, adsorption on W 1=12667
BaO, adsorption on W 2=17074
BaO, adsorption on W, electrostatic interaction 1=12668
BaO, (BaSr)O, cathodes, thermoelectric power, and conductivities 3=17969
BaO cathode, poisoned, thermionic emission, vel. dispersion rel. to decay phenomena 2=11693
BaO cathodes with SrO coating, Ba diffusion 2=9616
BaO, cathodes, sublimation, meas. technique and results 3=9830
BaO cathodes, work function patches 4=24728
BaO-coated cathodes, emission currents 1=10729
BaO-coated cathodes, u.v. irrad. effects on elec. cond. 1=18913
BaO, colour centres, e.s.r. study 0=11630
BaO, crystal cubic field splitting of Eu^{2+} 4=20152
BaO, desorption from W by elec. field 4=7722
BaO, dissociation energy, meas. 4=28267
BaO, elec. resonance spectrum and dipole moment 2=20796

Barium compounds—contd
BaO, electron ejection by noble gas ions 2=9626
BaO, enthalpy of formation of oxygen vacancies 2=14431
BaO films, evaporated, absorption bands 2=16818
BaO films, on W, secondary electron emission 4=582
BaO, Franck–Condon factors of band system 4=25660
BaO, layer on metal, work function change 0=5327
BaO, layers on W, structure 1=20701
BaO, luminescence, activated by Bi, Eu, Sm, Pr, Ce 4=22915
BaO-metal systems, work funcn. depend. on surface coverage 4=29961
BaO, microwave spectrum 3=17570
BaO molecular beam, interaction with W incandescent surface 3=23541
BaO, new absorption band system 2=696
BaO on nickel core, thermoelec. power 3=25426
BaO, photoelec. emission expts. 4=29964
BaO, as possible molecular beam frequency standard 3=12882
BaO, relative transition probabilities for some band systems 1=3553
BaO, secondary electron emission 2=1498, 7653
BaO, secondary electron emission, on various cores, temp. depend. 2=1497
BaO, single crystal formation 0=710
BaO solid +H_2O vapour reaction, mass-spectrometric study 4=23647
BaO, solubility in $Ba(OH)_2$ 0=710
BaO, sublimation, and W, work function, changes 3=19294
BaO, thermionic emission on doping with rare earths 3=422
BaO, transition electronic moment rel. to internuclear distrib. 2=6192
BaO, work function, films, on W, var. with temp. and deposition time 3=19296
BaO, work function, films, on W, var. with temp. and deposition time 3=19297
BaO—Ar suspension, Ar elec. cond. enhancement, appl. to m. h. d. power generation 4=27224
$BaO.Fe_2O_3$, crystal structure and mag. props. 1=14735
$BaO.6Fe_2O_3$, ferrimagnetism, Mössbauer study 4=26335
$BaO.6Fe_2O_3$, mag. domain patterns 1=6357
$BaO.6Fe_2O_3$, mag. susceptibility, temp. depend. 0=18203
$BaO.6Fe_2O_3$, magnetization, temperature dependence investigation 1=10169
$BaO.6Fe_2O_3$, Mössbauer effect 4=12591
$Ba(OH)_2$, Raman and i.r. spectra 1=1171
$Ba(OH)_2.8H_2O$, crystal structure, atomic, and Ba ion coordination 4=2071
$Ba(OH)_2.8H_2O$, OH bond orientation 3=4968
$BaO-MgO-P_2O_5$, phase equilibria and fluorescence 4=10421
$2BaO.3SiO_2$, struct. 2=8834
$2BaO.3SiO_2$, structure 1=20551
$BaO.TiO_2$, X-ray abs. spectrum of Ti, rel. to ferroelec. props. 0=1739
$2BaO:TiO_2:P_2O_5$, crystal structure and fluorescence 1=20561
$BaO-TiO_2-P_2O_5$, phase relations and fluorescence 0=11773
BaO–W system, photoelectron emission 2=13586
BaO—W system, work function and photoelec. emission 1=13106
$BaO-WO_3$ system, crystal structure and melting point 4=2070
$BaO-ZnO-P_2O_5$, phase equilibria and fluorescence 4=10421
BaPb, crystal structure 4=26641
$BaPb_3$, crystal structure 4=26641
Ba_5Pb_3, crystal structure 4=26641
$(Ba, Pb)Nb_2O_6$, $(Ba, Sr)Nb_2O_6$, ferroelec. props. rel. to structure 0=8217
$(Ba, Pb)SO_4$, as X-ray screen coating 2=14735
$(Ba, Pb)_{1-\delta}(Ti, Nb)O_3$ system, cryst. struct. 2=10898
$Ba_{0.97}Pb_{0.03}TiO_3$, anomalous polarization and discharge currents 3=13120
$(Ba, Pb)(Ti, Sn)O_3$, phase diagram, dielec. and piezoelec. props. 0=21236
$Ba[Pt(CN)_4].4H_2O$, luminescence 4=14371
$Ba[Pt,Pd,Ni](CN)_4.4H_2O$ diamagnetic anisotropy 4=26265
Ba—Pu oxide systems, crystal structure, atomic 4=7606
$(Ba_{1-x}R_{2x/3})Nb_2O_6$, where R is Y, Sm, or La 4=20417
$(Ba_{1-x}R_{2x/3})Nb_2O_6$, R = Y, Sm or La, ferroelec. props. 4=20417

Barium compounds—contd
BaS, Cu-, Sm- or Ag-activated, electroluminescence 1=6240
BaS, dielec. props. at 7.25 Mc/s 3=17932
BaS, thermodynamic props. rel. to vaporization 4=16301
BaS—Cu (borax), phosphorescence intensity rel. to time of firing and flux content 4=28720
$BaSO_4$, barite, crystal structure 3=13471
$BaSO_4$(barytes), Raman band intensities in Stokes region, temp. depend. 1=5052
$BaSO_4$ crystallization, in aqueous solution 3=16040
$BaSO_4$, effect of radioactive S^{35} on solubility 0=14646
$BaSO_4$, ionic structure, point charges concept 1=20400
$BaSO_4$, reflectance standards 0=3658
$BaSO_4$, surface for sky photometry integrating sphere 4=29295
$BaSO_4$, surface structure, effect of S^{35} radioactivity 1=20656
$BaSO_4$, vulcanization filler, dynamic elastic behaviour 2=5126
$BaSO_4$, X-ray diffraction pattern 0=18339
$BaS_2O_6.2H_2O$, crystal structure 1=1400
$BaSe_2O_5$, i.r. absorption and Raman spectra study 0=11526
$Ba_2(Si_2O_6)$, struct. 2=8834
$Ba_2(Si_2O_6)$, structure 1=20551
$BaSnO_3$, γ-reson. absorption, lattice structure, 78-1020° K 4=1350
Ba-Sr titanate, use for dielectric bolometers 1=4499
Ba–Sr titanates, enthalpy of tetragonal–cubic transition 2=20933
(Ba. Sr)O, cathodes, current fluctuations 0=5332
(Ba,Sr)O particle heating by electrons, conditions 4=11717

mass splittings, within baryon charge multiplets 0=3941
masses, rel. to mesons 4=3302-3
meson–baryon collisions, vector-meson prod. 4=27784
meson–baryon interaction and octet model generalisation 4=5930
meson–baryon pseudoscalar $P_{3/2}$ analysis 3=17296
meson–baryon scatt., asymptotic relations, T invariance importance 4=16830
meson–baryon scatt., rel. to fermion trajectories interreln. 4=21808
meson–baryon scattering, SU$_3$ symmetry 2=13827
meson-baryon, strong interactions 0=9263
meson–baryon systems and resonances, quantum number 4=21945
meson interactions, selection rule imposed by mass reversal 0=11082
meson scattering in higher symmetry schemes 2=18144
meson scattering, rel. to Sakata model full symm. 2=16130
meson scattering resonances, unitary symm. 2=18145
and mesons, algebraic theory 0=9272
mesons as bound states of antibaryon–baryon pairs 3=7871
model of mesons and baryons based on SU$_3$ symm. 4=11905
neutral currents, rel. to hyperon single prod. 2=7905
neutral currents, rel. to hyperon single production 3=6085
nonuplet theory, 1350 MeV prediction 4=16811
(0, 1) triplet, possible existence and props. 0=15421
in ν–N absorption, zero total strangeness 2=3313
in ν–N absorption, zero total strangeness 3=4377
octet and decuplet, reciprocal bootstrap reln. 4=27779
octet model, meson–baryon resonances 4=15002
octet model, violated, boson–baryon scatt. 4=11893
ω–baryon coupling const., calc 3=24627
Ω^-, possibility of observation 4=25192
$\bar{p}p \rightarrow \bar{B}B$, 3 GeV/c 3=17280
parities relative, rel. to electrodynamics theory 2=5589
parity det. from polarization, possible expts. 1=10931
parity of K-meson–baryon vertices 0=5523
π-baryon interaction, multiple model 0=20051
in π°-decay with two γ-rays 0=15387
production, $\nu + n \rightarrow$ lepton + baryon, weak-interact. theory 4=5955
prod. in pairs by p–$\bar{p}$, inconsistent with octet unitary symmetry model 4=19516
R-invariance in SU(3) octect model, rel. to magnetic moments 4=21763
reciprocal bootstrapping, and mag. moments, D to F ratio 4=27783
relation for masses 3=17188
resonance decay widths in unitary symmetry model 4=25189
from resonance decays, relative weights, in broken-symmetry theories 3=22073
resonance systems, with π, higher, prediction 4=19574
resonances, as baryons; pseudoscalar mesons systems 3=2192
resonances, first, in violated unitary symmetry 4=9075

Baryons—contd
resonances, with mesons, attractive force for baryon number 1/3 hypoth. 4=24993
resonances with mesons, isotopic-spin-zero 3=10040
resonances with mesons, $j = \frac{3}{2}^{+}$ in terms of W_3 symmetry 4=24994
resonances in octet model 4=30164
resonances, with π, K, selection rule 4=3468
resonances, in $\pi^- + N \to K^0(\bar{K}^0) + Y(K,N) + m\pi$, 2.8 BeV/c 3=17315
resonances, summary, rel. to 8-fold way and Regge trajectories 4=21910
resonances, tenfold assignment 3=14927
resonances as unitary multiplets 2=9777
resonances, unitary symmetry model 4=30171
SU(3) symmetry breaking in $\frac{3}{2}^{+}$ meson—baryon decuplet 4=27780
SU_3 spinor integral charge Z, rep. new triplet 4=27757
scatt., by mesons, asymptotes in unitary symmetry models 4=21793
scatt. on mesons and unitary symmetry with $T_3{}^3$ breaking test 4=21749
scattering, resonances, higher theoret. prediction 4=3310
self-energies, fourth-order contrib., and mass spectrum 3=537
six-dimensional manifold theory 0=18937
spin and parity, meas., for isobars, from decay 3=19597
spins and parities, determ., Adair's analysis 4=11952
strange resonances, spin—parity determ., new test 4=27778
strangeness −3, production in $\bar{p}$—d and K^-—p, theory 4=9286
strong interactions, baryon–mesons, model 0=20045
strong interactions with mesons, internal symmetries 1=7201
strong interactions, new symmetry replacing strangeness 3=5931-2
structure, rel. to universality of weak interactions 1=10842
symmetries in Sakata's model 0=20053
symmetries, theory 2=3256
symmetry princ., baryon–lepton 4=19422
10-dimensional vector space model, weak interaction transitions 0=11097
theory as alternative fermion state to leptons 3=22061
theory, many mass- and spin-states described simultaneously 3=24602
theory, in 3-dimensional isospace, with elementary resonance requirements 3=17294
$\frac{3}{2}^{-}$ octet of N^*, Y_1^*, Y_0^{**} and Ξ^* 3=10173
trio invariance symmetry principle 4=21751
two-baryon interactions, elastic 3=10060
unifield model based on Sakata's model 1=3121
unitary gauge theory, mass diffs. in multiplets 2=7813
universal repulsion hypthesis, for small distances 0=11098
weak interactions and decays 1=13321
weak interactions with pions, theory 3=24619
$Z^-(\Omega^-)$ prod. 4=6137

Beta-ray spectrometers
aberration, "spherical", reduced by azimuthally-varying fields 3=19615
alignment of short magnetic lens type 4=21841
allowed and non-unique first-forbidden spectra 0=17542
anomalous focusing for weak spectra 3=2414
application of trochoidal orbits 0=19757
automatic control circuits 1=5713
automatic operation, double focusing 2=2991
automatic, prism-type, using magnetic alloy 3=10093
β–γ directional correlation instrument 0=17517
Chalk River, iron-free, radial focusing aberrations 3=24365
Cherenkov counter, Pb-glass, for 1-10 GeV region 1=13228
coil arrangement for curved exit-slit instrument 2=13773
coincidences, intermediate image focusing type 2=1678
Compton effect, using semiconductor β and NaI: Tl γ detectors 4=9162
Compton electron spectrometer meas. of 30 MeV betatron bremsstrahlung 0=12657
Compton magnetic spectrometer, automatic meas. of spectra 4=16877
control system, automatic 3=24703
conversion coeffs. meas., sum-coinc. technique 2=7952
conversion lines, photographically recorded, intensity det. 2=20317
coupled to cloud chamber 4=16878
curved exit slit, high resolution 2=3317
degaussing system to cancel terrestrial magnetism 1=18979
developments, review 1=487
double-focusing, application to 662 keV transition in Ba^{137} 0=7517
double focusing, for conversion electrons from (n,γ) reactions 3=2245
double-focusing equilib. orbit radius 500 mm 2=20032
double-focusing, without Fe armatures 1=4651
double focussing, 50 cm, current sheet type 4=25066

Beta-ray spectrometers—contd
double-focusing iron-free instrument 0=20402-4
double focusing, low energy 4=19491
double-focusing, magnetic, theory 2=13710
double focusing, optimum performance 3=4378
double-focusing, optimum source dimensions and solid angle 1=5497
double-focusing, to $\pi\sqrt{2}$, 2 keV–6 MeV 1=5496
double-focusing, Siegbahn–Edvarson type, iron-free 1=5495
double-focusing, test on Ir^{192} 2=22752
double-focusing, use of pre- and post-accelerations for electron spectra 0-3 keV 0=10967
double-lens, for internal and external conversion 2=5621
electron–electron coinc., for short lifetimes 3=14962
electron optics, time of flight and image rotation 3=14658
electron trajectories analysis, central source 2=20033
evaporation device for samples 0=17308
fidelity, rel. to det. of small-order shape factors 1=7346
focusing of broad electron beam 4=27575
focusing in mag. field proportional to r^{-1} 3=9865
focusing props. of short lens instrument 2=9636
4π-scintillation type 4=16876
as γ-pair spectrometer, adaptation and application 0=5676
Geiger counter for spectrometer 2=5504
Geiger–Müller counter 2=5505
grounding of β-source by auxiliary α-source 1=5847
high-dispersion, double-focusing type 0=19759
for high energy beta decays 3=580
high-frequency deflection method for measuring short half-lives 0=17518
h.f. deflection method for short half-life measurements 1=4835
high luminosity electrostatic–mag., apparatus 4=29973
high luminosity electrostatic–mag., principles and props. 4=29972
high-resolution with high luminosity 0=7162
high-resolution sector spectrograph 1=13398
inhomogeneous field type with rH=constant 0=19756
with integral recording, use of large area sources 1=488
intensity distrib. in line focus, wave optics 4=602
intermediate-image, effect of window absorption and source backing 1=13707
intermediate-image, for electron scatt. expts. 3=5986
for internal conversion electrons, from (n,γ) reactions 3=7831
internal pair 3=14966
internal pair ang. correl. spectrometer for γ-ray multipolarity det. 0=15319
iron-free, toroidal, high transmission 2=5622
large permagnet spectrometer 0=19755
longitudinal magnetic, with intermed. image few keV to 2·5 MeV range 3=24701
low background, coincidence method with Geiger counter 2=5623
low energy detect. by CsI : Tl scintillator and accel. 4=21840
luminosity, large 3=19614
magnetic, for ang. distrib. observations 4=15044
magnetic, double focusing 2=3314
magnetic field meas. and stabilization 4=27831
magnetic field uniformity, methods of obtaining 1=4650
magnetic fields, circular homogeneous 4=8894
magnetic prism spectrometer, electron-optical system and construction 3=19363
magnetic prism spectrometer, resolving power, effective aperture, accuracy 3=19364
magnetic, prism type, 0.014-0.2% resolution 4=25067
magnetic spectrograph with photog. detect. and post accel. 0=13158
magnetic spectrometer for internal conversion spectra 2=20313
magnetic, use as Compton γ-spectrometer 2=18104
magnetic focusing, semicircular, and photographic detection methods, up to 20 keV 4=25065
magnetometer for 2=7702
meas. with split anthracene crystal spectrometer 1=3410
Moussa–Bellicard type, iron-free, double focusing 2=20314
p^+-i-n^+ diodes, Li-drifted, use 2=20202
permanent magnet spectrometer, inclined source 1=13533
permanent magnet type 0=1235
photoelectron intensity meas., correction for angle of acceptance 0=468
for photoelectrons, with inclined plane pole-faces 2=9637

Beta-ray spectrometers—contd
photographically recorded conversion lines, intensity det. 2=22749
$\pi\sqrt{2}$, adapted for coincidence expts. 2=3318
$\pi\sqrt{2}$ double focussing 4=15045
$\pi\sqrt{2}$, one-metre-radius, iron-free, double focusing 2=1511
$\pi\sqrt{2}$ precision iron-free, 35 cm optic circle radius 3=24702
positron detection 3=19617
positron, scintillation, 4π 3=7838
precision field measurement 0=19865
proportional counters in coincidence 0=17131
resolving power and luminosity of spectrograph with constant rH 1=7098
scintillation, anthracene, apparatus 2=20192
scintillation anticoincidence, rejection of partial-energy-loss events 4=9177
scintillation, coincidence-type, background 3=17251
scintillation, for coincidence work 0=5675
scintillation detector, photomultiplier noise reduction 2=22243
scintillation, 4π, for absolute meas. of spectra 1=16760
scintillation, improved 4=30217
scintillation, for simultaneous α and β counts 4=15115
sector, double focusing 3=17253
sector-type double-focusing 1=19176
short lens, design of continuous baffle 0=7161
Siegbahn–Slätis LKB3024, for internal conversion meas. 4=9423
Siegbahn–Slätis, theoretical analysis 2=11935
Siegbahn—Slatis type, characteristics 1=16761
Siegbahn—Slätis, use of scintillation detector 3=14964
six-gap type, magnetic system 3=17250
solenoidal, design and performance 2=13774
solenoidal, for (e^-,γ) coincidence expts. 3=14963
solid-state detectors 3=19616
source prep., e.m. separation method 3=12608
sources, chemical preparation techniques 4=25331
sources, prep. method 2=22488
spectrogoniometer for angular correlation meas. 4=15046
spectrograph for conversion and Auger electron spectra 4=30218
spectrograph design for relative measurements 1=2041
spectrometer, calculation methods 1=13400
spheroidal field and other mag. lens spectrometers, β-ray line shape and luminosity 4=30216
spiral orbit, resolution and collecting power 0=17307
spiral-orbit type, electron focusing study 2=1512
split anthracene crystal spectrometer, β-decay studies 1=3410
surface barrier detectors, correction for backscatt. and energy resolution 4=27830
surface barrier detectors, correction for energy and backscatter 4=27828
thin mag. lens, design and performance 0=2395
toroid-sector type, scintillation detector used 2=5624
toroidal iron-free $\beta-\beta$ coincidence spectrometer 1=13399
trajectories in magnetic prism 4=11707
trajectory calc. on computer, rel. to magnetic lens focusing 3=19342
with triangular field 0=2396
with two-fold $\pi\sqrt{2}$ focusing 3=7832
$2\times\pi\sqrt{2}$, double focusing 3=2246
use of plastic scintillators 3=2247
use of sets of spectrometers, for different energy ranges 0=17309
using emulsions 3=17252
vacuum depend. of transmission, resolving power 3=10095
variable bias, automatic, conversion electrons 4=1031

phase transform. up to 50 kbar and 500°C 4=26568
phase transformations, effect of Sb and Pb impurities 3=25751
phase transitions, up to 70 kbar 3=19067
photoelectromagnetic effect 0=6137
photoelectromagnetic effect and photoconductivity 3=8572
photoelectromagnetic meas. in lamina 2=14586
piezogalvanomagnetic effects 4=26032
piezoresistance, films, var. thickness and impurity 4=20355
plastic deformation, twin interactions 2=4334
polymorphs, press.-induced, structural and transform. characts. study 4=30795
preparation, for liquid-metal fuelled reactor 0=7675
quantum oscillations, pressure effect 4=28760
reflectivity, det. of tilt of optic axis 0=13667
reflectivity, i.r., in mag. field, quantum effects 4=7110
resistance, elec., 4-lead meas. system 4=30612
resist. elec. and Hall coefficient, var. with grain size 3=20323
scattering time at low-temp. 3=10809
secondary electron emission 0=5341
Seebeck coeff. of single crystals 0=11734
self-diffusion in Bi_2O_3, effect of phase transformation 4=6867
self-diffusion in Pb–Tl solid soln. 2=3941
self-magnetoresistance calc. 4=20353
self-magnetoresistance and pinch effect 4=4140

Bismuth — contd
semiconductivity, films, large temp. var. with Pb, Sn added 4=12883
shock-wave compression by projectiles from helium gun 1=9090
Shubnikov—de Haas effect 3=15586
Shubnikov—de Haas effect rel. to mag. field orientation 2=21104
single crystal orientation 0=6347, 10294
single crystals, dislocations by electric erosion 1=14282
single crystals, dislocations by electric erosion 1=17531
single crystals grown by Bridgman method 1=20444
skin effect, anomalous, at 2°K 0=1658
solid solubility in Ge, saturation diffusion expt. 3=3342
solid solution in Tl, superconductivity 1=10642
Bi, soln. in molten $BiCl_2$, absorption spectra 2=19563
spark cutting of crystals 1=11669
specific heat, low-temp., calc. 4=1395
spectra in $BiCl_3$, and solute equilibrium 4=5185
strain coeff. of thin layers 0=16198
structure, effect of pressures to 20,000 atm. 3=16017
superconducting critical fields of modifications II and III 3=21662
superconducting double layer, with Pb, diffusion and contact effect 4=24513
superconductivity of crystalline modifications 1=20220
supercooling 2=4447
surface activity, on Zn, internal friction study 2=21569
surface resistance, cyclotron resonance and quantum oscillations 3=17697
surface tension, 300-500°C 0=19088
thermal conduction, effects of u.s. vibrations 1=9985
thermal conductivity 1=920
thermal conductivity, change of melting 1=9990
thermal conductivity, change on melting 1=11171
thermal expansion coeff. 80-540°K 0=13493
thermal expansion, 4°K to room temp. 4=15434
thermoelectric figure of merit 3=20424
thermoelectric force rel. to Bi—Te alloys 2=14590, 18755
thermoelectricity, use for low-temp. refrigeration 3=359
thermoelectricity in mag. field, Kelvin reln. 3=8573
thermomagnetic figure of merit 4=4141
thin crystals, size effects in conduction 0=9927
thin films, magnetoresistance, thermal evolution 3=8517
thin films, opt. props. 0=10027
thin films, resistivity and its temp. coeff. 1=19826
thin films, resistivity and its temp. coefficient 2=3986
transitions under high press. at low temp. 2=7482, 9483
twin, kink and deformation bands, interferometric study 1=1361
twinned layers, load depend. 0=13936
twinned single crystals, recovery 2=21465
twinning, structure of accomodation region 3=8801
twins, wedge-shaped, props. of boundaries 4=10454
two-band model, matrix elements and select. rules 4=30546
u.s. amplification by crossed e.m. fields 2=15683
ultrasonic amplification, steady mag., pulsed elec. fields 3=20095
ultrasonic dispersion in mag. field 0=1567
u.s. vel., oscill. changes with var. mag. field, 4° K 3=8402
valence band, symmetry props., energy 1=7545
vapour pressure of liquid 3=9662
vapour pressure, upper limit at room temp. 1=179
viscosity, temp. var., m. p. to 1000°C 4=5160
weak field region, 77°—273°K 4=4139
whiskers, growth and props. 2=6788
X-ray diffrac. patterns at high pressure 0=3195
X-ray L intensities 1=13951
X-ray L spectrum, emission 2=6588
zinc borate luminescence, activator 2=2254
Bi^{209} atoms, hyperfine structure 1=2288
Bi^{209} nuclear quadrupole resonance, zero splitting cone 1=14831
Bi^{214} dust, size distrib. of radioactivity 0=4819
Bi-$BiCl_3$ liquid system, mag. susceptibility 2=19580
Bi—BiI_3, elec. cond. of molten solns. 3=11805
Bi-BiI_3, electronic conduction in melts 3=11806
Bi—BiI_3, mag. susceptibilities of molten solns. 3=11807
Bi-Cu thermocouple, mag. field effect 2=14504
Bi I—Bi II phase transition 0=14041
Bi—S solns., densitites, meas. 4=24185

Bismuth—contd
Bi—Sb thermojunctions 3=15640
Bi—Sn—Zn system, miscibility gap, calc. from thermodynamic functions 1=142

Bismuth compounds
with alkali metals, crystal structure 1=15123
perovskites, ferroelec. props. and structure 2=6522
with rare-earth metals, crystal structure 4=15791
Wood's metal, liquid, viscosity 2=21889
Bi alloys, hardness rel. to temp. 2=23792
Bi arsenate phosphors activated with rare-earth ions 4=20479
Bi base cast alloys, elec. resist. rel. to composition 3=20262
Bi chalcogenide, fused, elec. props. 2=21917
chalcogenides, photo-e.m.f. 1=6178
Bi monochloride, crystal structure 2=8826
Bi oxide and Au, multilayer film resistors, prep. 0=8287
Bi oxide-Mg fluoride anti-refl. coating deposition 4=23567
mixed Bi oxides, structure and ferroelectric props. 1=7689
Bi perchlorate aq. soln., presence of Bi polymer det. by X-ray diffr. 0=4247
Bi, single crystals, twin formation under load 0=18272
Bi solid solns. with Pb, Sn, Sb, Te, crystal structure 2=21515
Bi telluride dislocation etch pits 1=6492
Bi telluride, growth of n- and p-type single crystals 1=9116
Bi telluride p-type polycrystals, Bridgman effect 0=20944
Bi telluride, prep. of samples for elec. meas. 2=5252
Bi titanates, dielectric properties rel. to neutron irradiation 1=12475
Bi titanates, ferroelectric 1=14560
Ag + Bi alloys, liquid, vapour pressure 3=14422
Bi—Ag—O—Cs photocathodes, chemical and phys. props. 1=10731
$Bi_4Ba_{m-2}Ti_{m+1}O_{3(m+2)}$ switching props. 2=8467
$BiBr_3$, absorption edge, press. depend. 0=4406
Bi—$BiBr_3$ molten solns., mag susceptibilities 4=24239
BiBr, emission spectrum, A → X system analysis 3=6389
$\{Bi_{3-2x}Ca_{2x}\}[Fe_2](Fe_{3-x}V_x)O_{12}$, single-crystal growth 4=29043
Bi-Ca-Mg, phase diagram and border system correction 2=21538
Bi—Cd, molten, ultrasound velocity 1=5276
Bi-Cd, thermodynamic props. 0=1956
Bi-Cd-Sn, constitution 2=2403
BiCl, emission spectrum, rotational struct., electron trans. 1=7475
BiCl molecule, emission spectrum, vibrational analysis 1=14039
$BiCl_3$, critical temp. and coexistence curve 4=29812
$BiCl_3$, molten, Bi spectra and solute species equilibrium 4=5185
Bi—Cd, hardness, effect of composition near eutectic 4=7414
Bi—Cs, crystal structure 1=15123
Bi—Cs layers, secondary electron emission 0=12629
Bi—Cs, photoemission rel. to temp. 1=10732
Bi—Cu, arc stability 1=1899
Bi—Cu, liquid system, Cu crystallization kinetics 0=21162
Bi—Cu, liquidus curve 3=5554
BiF, band spectra 1=19632
BiF mol., rotational analysis of visible band system 2=20797
BiF, spectra, A—X system 4=28182
BiF, u.v. spectra 1=17324
BiF_3, chemical binding of DO_3 structure crystals 1=1387
BiF_3, μ^--meson atomic capture 2=13837
$BiFeO_3$, antiferromag. props. 3=3147
$BiFeO_3$, crystal structure 1=5100
$BiFeO_3$, crystal structure 1=10262
$BiFeO_3$, ferroelectric, Curie temp. det. 2=2205, 4090
$BiFeO_3$, ferroelec., mag. props., crystal struct., temp. var., Neel point 4=22774
$BiFeO_3$, lattice constants and magnetic properties, rel. to temp. 3=20770
$BiFeO_3$, magnetic ordering, by neutron diffraction, 20 and 600°C 3=5018
$BiFeO_3$, synthesis, unit cell det. 1=15099
$BiFeO_3$—$LaFeO_3$, dielectric transformations, simultaneous with mag. change 4=4214

Bismuth compounds—contd

$BiFeO_3—Sr(Sn_{1/3}Mu_{2/3})O_3$, Mossbauer change on antiferromag. phase transform. 4=15658
$BiFeO_3-SrSnO_3$, 4 solutions, ferroelectric Curie temp., from Mössbauer effect, temp. var. 4=4212
BiI_3, luminescence, at 77°K, emission and absorption edge connection 1=10111
BiI_3, luminescence, at 77°K, emission and absorption edge connection 1=11394
BiI_3, resistivity in liquid and solid forms 2=3997
BiIn, de Haas—van Alphen effect 3=12944
Bi—In liquid alloys, thermodynamic properties 1=143
Bi-Mg, liquid, thermodynamic props. 0=14644
Bi-Mn, mag. structure 0=13797
Bi-Mn, mercury process prod. 0=3269
Bi—Mn powders, ferromag. props., temp. depend. 1=3903
Mn-Bi powders, magnetic properties 1=7750
Bi—Mn, "spire" growth 1=14965
Bi_3NbTiO_9, dielectric props. 2=2206
Bi_3NbTiO_9, structure rel. to ferroelectricity 2=17026
Bi_2O_3, anodic films, prep. and props. 2=15151
Bi_2O_3, Bi self-diffusion, effect of phase transformation 4=6867
Bi_2O_3 films, prep. and props. 1=19734
Bi_2O_3, Schumann u.v. absorption spectrum 1=17893
Bi_2O_3, use in dielec. mirror systems 2=1251
Bi_2O_3—Au films for heat reflecting mirrors 1=4473
BiOCl, crystal structure atomic, by electron diffr. 4=4600
BiOCl, crystal structure, electron diffr. study 2=10819
BiOCl films, electron diffraction intensities rel. to tilting and λH 3=1295
BiOCl thin films, electron diffraction intensities rel. to tilting angle, crystal size & wavelength 3=1372
$(Bi_2O_2)^{2+}(Me_{m-1}R_mO_{3m+1})^{2-}$, ferroelec. props. 2=16781
Bi_2O_3, electrical conductivity and thermoelectric power, up to 1000°C 4=10043
Bi_2O_3, oxide addition effect on polymorphism 4=23253
Bi_2O_3, pure, polymorphism stability relations 4=23252
Bi_2O_3, rel. to double layer antirefl. coatings 4=21307
$Bi_2O_3-MgF_2$ bilayer, antireflection theory 2=7371
$Bi_2O_3.nMnO$, relaxation polarization 1=14539
$Bi_2O_3—Nb_2O_5$ systems, phase equil. relns. 3=6813
$Bi_2O_3—ZnO$, electroluminescence, field and time depend. 1=6242
$BiOHCrO_4$, crystal structure 2=23855
BiPb alloy film 4=14530
Bi—Pb alloys, hexagonal close-packed structures 3=8883
Bi-Pb, carrier conc. and mobility 0=1659
Bi—Pb, hardness rel. to composition 1=14923
Bi-Pb, liquid, atomic distributions 0=3521
BiPb liquid n.m.r. 3=21419
Bi—Pb, liquid, X-ray structure study 1=12861
Bi—Pb, mag. susceptibility, quantum oscillations, Pb depend. 1=1191
Bi-Pb, single crystals, twin formation under load 0=18272
Bi-Pb, thermal cond., normal and supercond. 0=10843
Bi-Pb, thermodynamics 2=2402
Bi—Pd, crystal structure 1=15123
Bi-Pd system, γ-phase and low-temp. structure 0=16318
Bi-Pd system, structure 0=16318
Bi—Pt, crystal structure 1=15123
Bi—Pt, between PtBi and $PtBi_2$, structure 3=11280
BiPt, supercond. and structure 0=10847
Bi—Rb, crystal structure 1=15123
Bi-Rh, existence of Bi_4Rh and Bi_3Rh 0=14009
β-Bi_3Rh, crystal structure 1=15087
Bi_nRh (n = 2, 3, 4), structure and phase diagram 2=4448
Bi_2S_3, conductivity electrical and Hall effect, single crystals 3=22937
Bi_2S_3, prep. and elec. props 4=10140
Bi_2S_3, semiconducting properties 1=19871
Bi_2S_3, sp. ht. and entropy 0=13491
Bi_2S_3, sp. ht., structural prop. correl. 0=13490
$Bi_2S_3-Sb_2S_3$ films, elec. and photocond. props. 0=601
Bi—Sb, effective masses meas. 3=15587
Bi—Sb alloys, elec. props., concn. dependence 2=4029
Bi—Sb, elec. props., 75-500°K 4=26034
Bi—Sb, Ettingshausen figure of merit 3=13070
Bi—Sb alloys, Hall coeff. and magnetoresistance tensors, 77° to 300°K 4=10042
Bi—Sb, Hall const. and resistivity, Sb conc. depend 1=1072

Bismuth compounds—contd

Bi—Sb alloy, interband transitions and band structure 4=22539
Bi—Sb laser, 100 radiations, p—n junctions 4=27697
Bi—Sb system, liquid, struct. from viscosity, elec. cond. 4=21110
Bi—Sb alloy, magnetoresistance non-linear rel. to electron—phonon interaction, 2°-4°K 3=10803
Bi—Sb alloys, magneto-Seebeck effect 3=10896
Bi—Sb alloys, magnetothermal effect, band structure explanation 3=20324
Bi—Sb, Nernst—Ettingshausen figure of merit meas. 4=22704
Bi—Sb alloys, photoelectromagnetic effect and photoconductivity 3=8572
Bi—Sb alloys, resist. elec. and Hall coeff., var. with grain size 3=20323
Bi—Sb alloys, single-crystal growth 4=23334
Bi-Sb, single crystals, twin formation under load 0=18272
Bi—Sb alloys, thermoelec. props. rel. to mag. fld., 78°-295°K 3=4958
Bi—Sb alloys, thermoelec. props., rel. to mag. fld. 77°-295°K 3=10894
Bi-Sb, thermoelec. props., 20-300°K 2=8450
Bi—Sb alloys, thermomagnetic effects, 80° to 300°K 3=10806
Bi—Sb alloys, thermomagnetic figure of merit, and Ettingshausen cooling 3=22938
Bi—Sb system, thin films, resistivity and temp. coeff. 1=19826
Bi—Sb alloys, weak magnetic field region 77°—273°K 4=4139
$Bi_{85}Sb_{15}$ semicond. magneto-, thermoelec., Te doping effects 4=30618
$Bi_{88}Sb_{12}$ + 0.5% Pb, thermal cond. and thermoelec. power meas. 4=14424
$Bi_{0.92}Sb_{0.08}$, temp. effect on transport props. 4=26033
Bi-Sb-Te elec. and thermoelec. props. 0=2915
$BiSbTe_3$, thermoelectric props., effect of crystallization freezing rate 1=8969
$Bi_{24}Sb_{60+x}Te_{150-x}Se_6$ thermoelec. props. 3=13138
$(Bi_{x-x_1}Sb_{2-x_1}Te_{x_1})(TySe_{3-y})$, elec. and thermoelec. props. 3=17869
Bi—Sc alloys, crystal structure 4=2072
Bi-Se, carrier conc. and mobility 0=1659
Bi-Se, crystal structure, atomic, of solid solns., C33 tetradymite 4=10527

hydrogen bond energy in phenols, effect on n.m.r. spectra 1=9411
H–H in ethylene 2=16561
H, in ferroelec. cpds., rel. to i.r. absorption 0=650
H, in formation of complexes, n.m.r. study 2=20867
H bond formation, nitriles as proton acceptors 2=17087
H bond formation in solutions 0=3535
H-bond formation study, by i.r. spectra, in $CDCl_3$ in non-polar—proton-acceptor solvents 4=28208
H, in glycols, theory of permittivity and viscosity 1=15896
H, halide anions as proton acceptors 3=17566
H, hydrogenous liqs., proton motion, neutron scatt. meas. 4=27165
H bonding of hydroxide ion 4=29131
H bond interaction of hydroxyl groups on silica 1=20691
H–H, intermolec. in 7 compounds, rel. to vibration freq. 3=25152
H, in isopropanol 3=12853
H-bond, in KH_2PO_4-type ferroelectrics, collective motion 4=7043
H, lengths and angles in crystals 0=14039
H-bonded liquids, structure, by neutron scattering 3=5428
H, in molecular crystals, electron-irrad., e.s.r., analysis 1=20197
H, and molecular shape change 4=28179
hydrogen molecule bond energy calc. 1=860
H, NH_3 with ammonium halides and water 1=20555
H, in NH_3 crystals 0=4634
H, in $NH_3 \cdot H_2O$ crystals 0=4633
H bond in $NaH_2PO_4 \cdot 2H_2O$, Raman and i.r. spectra 1=2444
H, from n.m.r., t-butanol organic solutions, p shift 4=1251
H, in napthazarin, quinizarin, radicals, anion, by e.s.r. 3=17610
H, organic cpds. containing π-electrons, effect on p.m.r. 3=15383
H bond, in organic liquids, dielec. props. 3=21385
H, in organic mols., vibration, by i.r. spectroscopy, proposed study 3=6378
H, protection of radicals from interaction 1=6056
H, quantum effects in double potential well 2=6212
H-bond, radii 2=19083

Bonds—contd
H, Raman spectrum in Rochelle salt, para-ferroelectric transition mechanism 3=20484
H, rel. to anti-Stokes components of Raman spectra 0=15718
H, rel. to dielec. saturation 2=13350
H, rel. to luminescence of systems containing them 2=14703
H-bonds, rel. to proton positions in solids 1=9074
H, relative bonding of D, rel. to acid ioniz. constants 2=10276
H bond, review 4=22344
H, in solid CH_4, NH_3, H_2O, effects in vac. u.v. absorption
H-bonded solids, double-minimum potentials 2=14351
H, in solids, failure under tension, theory 0=13918
H-bonds in solutions of polar mixtures in nonpolar solvents 4=5207
H, studies by n.m.r., association shift 3=25140
H-bonded systems, low-lying second potential minimum 0=2739
H, in water and crystal hydrates, i.r. absorption 1=15882
H in water from i.r. absorpt., 27°-209°C 4=21137
H, for water in organic solvents 3=9449
H—H weakening, in photochemical reaction with Hg 2=4552
hydrogenation, energy, rel. to hybridization 2=545
hydrogeneous liquids, neutron study 0=3523
ice, H-bonds, theory 4=25804
ice, O atom separation elongation on isotopic exchange, rel. to temp. 4=10536
inclusion compounds, dispersion forces, review 3=1250
inert gas halides 3=4750
intermetallic cpds., tetrahedral, mol. orbital 3=776
intermolecular H bonds, n.m.r. study of alcohol and chloroform solutions 1=11113
intra-molecular, spectroscopy investigations 0=9809
iodine, intermolecular bonding in solid 2=16581
ionic character of chemical bonds 1=11111
ionic—covalent, in crystals 1=893
ionic-covalent, in crystals 2=6244
ionic crystals, theoret. binding energy between ions 4=28442
ionicity, effective charge, absorption near 0°K 0=507
ions in octahedral fields, mag. moments 4=1355
$K\alpha_{1,2}$ emission lines rel. to chemical binding 2=21262
lanthanide complexes, weak covalent bonding 4=1276
lanthanides (III) in ThO_2, oxide ligands, nephelauxetic effect 4=20462
in lattices, critical percolation probabilities 1=12346
length, dependence on ionicity, hybridization and bond order 0=17794
length determ., from Weissenberg photographs 3=25699
lengthening rel. to lone pairs 2=8120
lengths-force consts. correl. 4=25625
liquid solns., two component, rel. to luminesc. 2=21913
liquids, effect of hydrogen bond on specific heat 4=21121
liquids and solids, energy rel. to surface tension 4=10595
in long conjugated chain molecules, length alternation theory 0=9835
MO calc. of π-electron spectra, effect of bond length variations 1=14085
Madelung constant, C3 and C9 structures 3=20047
magnetoelectric and charge storage effects 2=4032

maleic acid 1=14073
metal borides, electron requirements 3=8330
metal—glass surface regions 4=10594
metallic hydrides, slow neutron scattering 2=547
metallic and non-metallic, Na–NH_3 soln. 2=1151
metallic, review 4=6681
metals, forces with potential energy part due to cond. electrons 4=23085
metals, interatomic, var. with electron structure 3=20045
methane, bond moment ratio 2=1995
methyl-substit. mols., hyperconjugation, rel. to proton hyperfine splitting 3=739
mobile electrons in conjugated bond systems 1=9940-5
molecular, correlation energy for Hartree-Fock transform. 2=20771
molecular crystals, rel. to compressibility 3=15985
molecular crystals, variation with temp. 2=10826
molecular, deriv. from e.s.r. meas. 3=17611
molecular, intra-atomic correlation correction studies 0=17796

Bonds — contd
molecular, localized chemical, magnetic study 1=14079
molecular refractivities 3=15332
molecular solids cohesive energy, electronic correl. dispersion contrib. 4=28300
in molecules and non-metallic crystals 0=1774
molecules with π-electrons, H-bonds in excited states 3=25086
molecules, polyatomic; distance and angular centrifugal distortion 3=2607
monohydrides, series of, binding type, discontinuous change 4=17281
naphtazarine, lengths and orders, calc. 0=13453
naphthols, hydrogen bonding and electronic spectra 1=17329
nitriles, π-electron calc. by self consistent charges 4=25712
nitromethane, N—O, C—N and C—H, dipole moments 4=3897
nitroso-methane and dimers 4=15373
nuclear coupling const. as measure of s-character 3=12862
nuclear quadrupole study 2=14349
O—D... O, in crystals, n.m.r. study 4=28894
octahedral—tetrahedral coordination change, energy value 1=12328
I-V cpds., covalent bonds, rel. to semicond. props. 2=6247
orbitals, hydrid, and hexagonal structure of Fe—Ni alloys 3=8884
organic, conjugation effects on Raman spectra 1=14032
organic saturated hydrocarbons, energy calc. from σ-electron charges 4=15324
orthoboric acid, O—H...O bond 1=14077-8
oxalic acid dihydrate 1=14073
oxyanions 0=4208
oxyanions of group VII 1=7474
n-paraffins, bond polarizability and internal fields 1=12296
pentaboranes, halogenated, fragmentation patterns 0=21271
perovskites, cubic, superlattice Madelung energy 3=20046
phenol, hydrogen bonding and electronic spectra 1=17329
phenol and substituted phenols in polar solvents, hydrogen bond, electrostatic model 4=30449
polar character rel. to Raman band intensities 2=6172
polycyclic aromatic hydrocarbons, bond order calculations 1=7480
polyelectrolytes, ion binding, chain model 2=7206
in polyenes, bond alternation defects 2=6241
polyethylene, cohesion, autogenous, under high press. 4=26526
polymer chain, real, polarizabilities, principal 4=20
polymer solutions, H-bonds, linear associations 2=1
polymer solns., shearing 0=3522
polymerization with alkali metals, metal—carbon 4=2
polymers, C—C, rupture energy differences, explanations 3=20038
polymers, inorganic [AB], alternation calc. 4=9801
polymers, π electron states, calc., analogue 4=9757
polyphenyls, bond orders, mobile, calc. using SCF—LCAO MO theory 4=22413
post-transition metal tellurides, solid solns. 2=23858
in propane, diamagnetic anisotropy 0=2745
propylene, molecular r_s structure 1=17371
in proteins, hydrophobic bonding 2=17443-4
pyrazine, from interaction coeffs. 4=22411
pyridine, bond orders, influence of foreign atoms 1=9936
pyrimidine, bond orders, influence of foreign atoms 1=9936
quantum mechanics 1=19647
α-quartz, bond lengths 3=18318
refractivities of covalent bonds 1=14075
rel. to film growth 3=16132
relativistic theory 1=859
resonance structures for a triplet state 0=17790
rupture, recoil energy needed 2=6129
s character, rel. to C^{13}-proton spin coupling consts. 0=4225
saturated cpds., double bonding 2=6216
semiconducting cpds. $A_2^{V}B_3^{VI}$ 1=19867
semiconducting sphalerite-type structures, rel. to mag. susceptibility 3=20549
semiconductor, atomic, rel. to mechanical properties 3=25824
in semiconductors 0=15945
semiconductors, chemical bonding effects 2=10462

Bonds—contd
semiconductors; chemical, rel. to electron states 2=23263
semiconductors, covalent 3=10566
semiconductors, diamond-type, dangling orbitals on clean (111) surfaces 3=10748
semiconductors, nature 3=2687
in semiconductors, PbTe, PbS, PbSe 2=8686
in semiconductors, review 1=6139
separability of electron pairs, theorem 0=15770
shortening correl. by electronegative substituents with orbital hybridization 0=20694
shortening by electronegative substituents 0=20695
σ, binding energy 1=17336-7
σ-bond binding energy, general theory 1=8851
silica, hydroxyl bonds rel. to F^1 centres 4=22951
silicates, Si–O, tetrahedral distance 3=25715
single-asperity solid-state, formation and initial growth 0=8143
sklodowskite, U—O bond length 3=16085
in solids, book 4=22446
solids with H atoms, effect on electron diffr. crystallography 2=10824
spin–spin coupling across several bonds 3=719
strengths, from overlap charge potential energy 4=25626
strong and weak, in 1-dimensional atomic chain 2=3870
substituted methanes, bond energies 2=18490
succinic acid 1=14073
succinimide 1=14073
surface, in Ge and Si, model 2=23911
tetrafluorohydrazine, strength of N—N bond 1=6054
s-tetrazine, from interaction coeffs. 4=22411
III—V cpds., A surfaces, rel. to elastic strain 3=3219
III—V cpds., dangling 1=11140
transition-element cpds., covalent bonding, rel. to mag. props. 1=1202
transition-group complexes, partly covalent bonding 1=866
transition-metal binding in DNA solns. 2=11393
transition metal complexes, stability, effect of π-bonding 1=868
transition metal oxides and carbides, metal—metal, screening effects 4=22450
transition-metal oxides, co-ordination 0=20954
s-triazine, from interaction coeffs. 4=22411
trigonal bipyramid molecules, relative bond strengths 1=11112
two-electron bond, heteropolar case 3=12808
two-electron chemical bond 0=15766
two-electron chemical bond 4=15335
uranyl ion, π bonding 1=7481
use of Mössbauer isomer shifts as index to chemical bonding 4=9816
valence-bond dependence upon substituents of C^{13}–H and Si^{29}–H coupling 3=2661
valence, in diamond-type crystals 1=2364
valency-bond theory, Coulomb energy 0=17818
Van der Waals forces between atom and solid surface 4=12411
in vinyl halides 0=17771-2
in water structure model 1=11749
in water, structure model 1=12864
water, X-ray and i.r. study 0=8666
wave-function anal., with n.m.r. spectroscopy 1=3562
zinc blende structure, rel. to energy bands 3=25230
Al–transition metal, spd-hybrid localized, degree of polarization 4=6679
AlF, from spectrum, microwave 3=19973
AlH_3 and AlD_3 trimethylamine and tetrahydrofuran complexes, coordination bonds, rel. to i.r. spectra 4=3869
AlO, in transition a→ $X^2\ \Sigma^+$ 2=8122
Al_2O_3 (corundum) 1=20236
Al_2O_3 (corundum) 2=4250
Ar_2^+, three electron, rel. to binding energy 2=10237
ArH and ArH^+, electronegativities from comparison of bond lengths 0=20641
$AsCl_3$, ionic nature and hybridization, from dipole moments 1=871
AsF_3, ionic nature and hybridization, from dipole moments 1=871
AsLi, covalent bonding 2=6247
$AsNa_3$, covalent bonding 2=6247
As_4O_6, ionic nature of As–O bond 4=10468
As_4S_4, As–As and S–S 3=727
B cpds, n.m.r. study 0=3138

Bonds—contd
B hydrides, energies and distances 3=22556
B, to radicals NHR and NH_2, magneto-optic meas. 4=15343
B^{11} in crystalline borates 1=12568
B–I by nuclear quadrupole resonance 2=14860
B–N in solid BN 0=4255
BN, direct trans. of hexagonal to denser forms 3=11203
BN, thermal transformation from turbostratic to ordered-layer-lattice 3=11201
B—S, from magneto-optical effects 4=15344
B = S and B–S, energies 0=14970
$BaSO_4$, ionic structure, point charges concept 1=20400
Bi_2Te_3, cleavage–surface bond saturation 0=14151
Br_2. benzene, charge transfer lack, p.q.r. investigation 4=25802
in $Br_3B_3S_3$, from X-ray study 0=14028
C–Br, refractivity 2=22989
CBr_4. p-xylene, charge transfer lack, p.q.r. investigation 4=25802
C—C in aliphatic hydrocarbons, mag. shielding const 3=1253
C–C bond lengths and radii of C hybrid orbitals 0=1510
C–C and C—H, diamag. anisotropy 3=22585
C–C and C–H, in polypropylene, bond polarizability effect on optical props. 0=20971
C—C and C-halogen, diamag. anisotropy effects in n.m.r. 3=17615
C-C, chemical shift in n.m.r. spectra of cyclohexyl derivatives 3=8297
C—C, diamag. anisotropies under mag. field 3=15375
C–C, mag. susceptibility 1=17353
C—C in NH_4 oxamate and Li oxalate, electron density 4=4595
in C^{12} – C^{12} "nuclear molecule" 1=17153
C–C refractivity 2=22989
C–C in squalene, stability 0=6417
C–C, C═C, C≡C, optical anisotropies 4=22343
C = C and C = O polarizability tensor components 0=17799
C ≡ C and C ≡ N, diamag. anisotropy effects in n.m.r. 4=6648
C ≡ C, C = O spectral bands in phenylpropiolic acid and derivs. 4=25714
C_2, C_3, C_4 and electron density distrib. 3=22540
C—Cl, in 6-chloro-2-nitrotoluene 4=17704
C–Cl in methylene chloride 2=6206
C–Cl, refractivity 2=22989
CCl_4. p-xylene, charge transfer lack, p.q.r. investigation 4=25802
C—F, lengths and strengths 3=8244
C–F, refractivity 2=22989
C–F in semiquinones 0=4218
CF_3 reactions, bond and activation energies, correl. 4=30895
C–H, in alcohols, valency vibrations, temp. depend. 2=22986
C–H, in alkanes, effect in reactions with tritium recoil atoms 4=7776
CH, anisotropic proton hyperfine interaction 4=30424
C—H, bond lengths and electronegativity 1=6028
C–H bond moment, spectrum determ. 2=12339
C–H bond polarity in acetylene 1=8852
C^{13}—H coupling constants 4=3844
C–H direction in alanines, by e.s.r. 2=14821
C^{13}—H, effect of substitution, methanes 3=20001
C^{13}–H, in ethylene 2=16561
C–H^2 in formyl cpds. 2=3786
C—H, and methyl group, magnetic screening constants 4=3849
C–H...O 2=20900
C—H, optical anisotropies 4=22343
C—H, permanent dipole moment 1=12334
CH, props. rel. to proton hyperfine splitting 4=6647
CH radical, effect on electronic structure 1=7477
C–H refractivity 2=22989
C–H, in substituted methanes, study by C^{13} splitting in proton resonance spectra 0=4224
α C—H in trialkylboranes, rel. to B^{11} quadrupole resonance 4=6645
C—H, vibrations, stretching and planar bending, −180 to 20°C 3=22577
CH_4, BH_4^-, NH_4^+, isoelectronic systems, bond lengths 3=22554
CH_4 and CD_4, bond length det. by electron diffraction 0=20693

Bonds—contd
C_2H_2, bond lengths 3=10531
$C_6H_6^+$, lengths 2=6194
$(CH_3)_3CBr$, ionic character 2=8096
$CHCl_3$, $CDCl_3$, bond polarizability derivatives 3=20006
$(CH_3)_3C^{35}Cl$, rel. to quadrupole coupling 3=4769
CHF_2Cl, mol. structure 2=3738
in CH_3I, reactive scattering of K beam 1=12336
in C_2H_5I, reactive scattering of K beam 1=12336
C–I dissociation energy 2=19142
C–I, refractivity 2=22989
C–O, order-length and energy-length relations 0=17852
C = O stretching vibr. in copolymers and hydrogenated monomers 4=12550
CO, two in mol., effect on Raman spectra 2=18465
CO, solid, e. s. energy calc. from quad.-quad. interaction 4=30494
CS_2, in upper state 4=20065
CaF_2, from deflection in inhomogeneous elec. field 4=22378
Ca–Zn cpds. 2=17038
Cd–C, in $Cd(CH_3)_2$ 1=844
$Cd[Co(CO)_4]_2$, bond structure 2=2000
CdSb, anisotropy of chemical bond 3=25649
CdSb, electron deficient, MO LCAO calc. 4=6559
CdSb, two conduction zone model 3=25357
CdSe, covalency, rel. to internal fields 3=11115
CdTe 0=7833-4
Cl–C, in chloranil and its complexes, nucl. resonance study 0=16193
$(Cl-H-Cl)^-$ ion, H-bond nature 2=22960
Cl_2, lengths by electron diffraction 2=22960
ClO, symmetric, asymmetric stretching freqs. 3=12838
Co salts, covalent bonding 1=20237
Co salts, covalent bonding 2=4251
$CoCl_2.2H_2O$, from crystal structure, atomic 4=7612
CoF_2, from deflection in inhomogeneous elec. field 4=22378
$CoSe_2$, chemical bonds in crystals, rel. to props. 1=3769
$(CoX_6)^{4-}$, X=halogen, electron distrib. 2=20832
Cr^{3+}, covalent, with surroundings, effect on spin-Hamiltonian 1=9052
Cr cpds., chemical bond and X-ray emission 3=23086
Cr ferrite, atomic bond energies, effect of alloying elements 3=20900
Cr oxychlorides, fluorides, sulphates, from e.s.r. 4=20098
Cr, rel. to $L_{II,III}$ energy levels 4=1427
CrB_2, quadrupole bond, n.m.r. meas. and calc. 3=11121
$Cr-O_8$ in K_3CrO_8, covalent character rel. to e.s.r. and optical spectra 3=3166
$(CrO_8)^{3-}$ ion, in K_3CrO_8, ligand field calc. 2=16528
$CrS(_{1\rightarrow 1.2})$ bindings rel. to electrical properties 1=11250
Cu chelates, N bonded, e. s. r. study 4=30471
Cu complexes, e.s.r. study 1=11117
$(CuCl_6)^{4-}$, σ-bond 2=6248
CuF_2, from deflection in inhomogeneous elec. field 4=22378
$CuFeS_2$, 3d-shell, sp^3 bond 3=1027
$CuSO_4$, anhydrous Cu–O bonds 2=8833
$CuSO_4.5H_2O$, hydrogen bonds 2=4430
$DCrO_2$, O–O, by neutron diffraction 3=1334
FHF^- ion H-bond, wave-mechanical study 1=12295
Fe–butadiene-like residues 3=2643
Fe complex cpds, covalency, rel. to Mössbauer effect 4=9742
Fe complex compounds, by Mössbauer effect 4=28328
Fe complexes, chem. binding rel. to Mössbauer spectra 2=14235
Fe cpds., complex and covalent, Mössbauer study 3=12894
Fe-group ions in fluoride crystals 3=15407
Fe-group ions in fluoride crystals 3=20043
Fe silicides, 3d-electrons of Fe 3=20041
Fe–Mo solid solutions, X-ray spectra investig. 3=5141
$FeSb_2$, chemical bonds in crystals, rel. to props. 1=3769
$FeSe_2$, chemical bonds in crystals, rel. to props. 1=3769
$FeTe_2$, chemical bonds in crystals, rel. to props. 1=3769
GaAs, electron density distribution 1=12638
Ge, bending under stress 4=28305
Ge, valence bonds, calc. 1=2364
Ge–Ge in solid, strength 3=25177
H halides, H-bond with org. oxygen cpd. 3=2629
H_2^+, binding energy, from 3-body theory 1=4924
H_2^+, d-hybridization of π-bond 1=12298

Bonds—contd
H_2, diatomic band destruction of pressure, calc. 0=15767
H_2, study by n.m.r. 0=505
H_3^+, electron pairing 4=30444
H_3^+ molecule–ion 4=12482
$HCrO_2$, O–H–O, by neutron diffraction 3=1334
$HCrO_2$, proton resonance study 1=5075
$(HF)_2$, H-bond, electrostatic contrib., multicentre integrals 4=3875
HN_3 suspended in solid N 2=4151
HO_2 in D(H–OOH) and $D(H-O_2)$ 2=15131
H_2O, calc. 4=6550
H_2O, chem. binding, electronic structure effect, calc. energy 4=30446
H_2O, H-bond energy rel. to valence vibration freq. 4=22384
H_2O_2 1=3843
H_2O_2, aq., frozen, H bonds rel. to orientation 2=4258
$H_9O_4^+$, theory of oxonium hydration 2=3766
He_2^{2+}, natural orbital expansion coeffs. 4=25648
He^4, three-body bound state, binding energy 3=25109
Hg halides, in molten state 3=9460
Hg–C, in $Hg(CH_3)_2$ 1=844
$HgCl_2$, from deflection in inhomogeneous elec. field 4=22378
$Hg[Co(CO)_4]_2$, bond structure 2=2000
$HgSO_4.H_2O$, crystal struct., rel. to H bonding 4=26658
I_2, diatomic bond destruction by pressure 0=15767
In lattice, Fe impurity atom, anharmonicity 2=23039
InC_5H_5, gaseous 4=25707
KD_2PO_4, D intrabond motion rel. to ferroelec. 4=10112
KD_2PO_4, proton and hydrogen bonding 1=5037
KD_2PO_4, H-bond, deuteron jumping effects 2=12365
KH_2PO_4, proton and hydrogen bonding 1=5037
KH_2PO_4, rel. to short-range interionic forces 2=12363
$KNiF_3$, π bonding, origin 2=20835
$KOsO_3N$, Os bond determ. by L_{III} absorption spectrum 2=14693
LiH, nature of chemical bond 0=14017
LiH valence-bond wave--function analysis 2=12338
$Li(N_2H_5)SO_4$, H–H and N–H distances, 4=1902
Li_3Sb, ionic character, from semiconducting properties 4=1589
$Me_2(SO_4)_2.8H_2O$, bond lengths 2=21524
MgF_2 films on support, existence of chemical bonds 4=29122
MgO periclase in brick, impurities effect 4=30869
$MgS_2O_3.6H_2O$, O–H and H–H 3=25721
Mg_2Sn, rel. to 23·8 MeV Mössbauer absorption line 4=12592
Mn complexes, s- and p-bonding 3=10564
Mn cpds., from e.s.r. h.f.s. 4=20095
$MnCl_2$ and MnF_2, from deflection in inhomogeneous elec. field 4=22378
$Mn^{2+}-F^-$ pair in NaCl crystal, σ-bond character, from e.s.r. 1=14801
$MnTe_2$, chemical bonds in crystals, rel. to props. 1=3769
Mo silicides, covalent components 3=25213
Mo_2B_5, quadrupole bond, n.m.r. meas. and calc. 3=11121
$Mo_6Cl_8^{4+}$ 3=8281
N–F cpds., theoretical aspects 2=20836
N–F and N–N in NF_3 and N_2F_4, bond strength 1=19656
N–H in amines, solvent effect on stretching and deform. freqs. 2=7219
$NH_4H_2PO_4$, H–O bond, resonance with NH_4^+, from i.r. absorpt. spectra 3=15342
N–N in cyanogen 3=25729
N–N, in N_2O_4, LCAO MO calc. 1=2338
N_2, lengths, by electron diffraction 2=22960
N–O distance, in $Ce_2Mg_3(NO_3)_{12}.24H_2O$ 4=7611
N–O, force const. and bond parameters 0=5899
NO, lengths, by electron diffraction 2=22960
NO, solid, e. s. energy calc. from quad.-quad. interaction 4=30494
NO_2 group of substituted aromatics 2=16540
NO_3^- in solution, H-bonding 2=5024
N_2O_4, calc. 4=15373
NSF 3=22563
$NaHF_2$ and $NaDF_2$, H-bond with F atoms 4=4623
$NaHF_2$, $NaDF_2$, H-bonds, neutron diffn. meas. 4=28308
$Na_2H_2P_4O_{12}$, rel. to 2D disorder struct. 4=30855
$Na_2S_2O_6.2H_2O$, H-bonds, p. m. r. meas. 4=7643
NaSb, intermetallic semiconductor 0=7947
NaSb, ionic character, from semiconducting properties 4=1589

Bonds—contd
- Na_3Sb ionic character, from semiconducting properties 4=1589
- NbB_2, quadrupole bond, n.m.r. meas. and calc. 3=11121
- Ne, solid, cohesive energy calc. 4=28301
- Ni-Al, polar component 2=21259
- NiAs type cpds., characterization from X-ray spectra 1=14617
- $Ni(CO)_4$, bond structure 2=1999
- NiF_2, from deflection in inhomogeneous elec. field 4=22378
- Ni—H chemisorption, ionicity 4=22949
- Ni—Mo solid solutions, X-ray spectra investig. 3=5141
- O—Cl, O—P, O—Si, correlation between stretching freqs., force consts. and lengths 4=9697
- O—H bond, absorpt. band, effect of ions 3=8285
- OH, changing props. in O-hydride series 4=9731
- O-H in $Sr(OH)_2.8H_2O$ crystals 1=7717
- O—H—O bond, neutron diffn. length, symmetry meas. 4=28175
- O-H-O and O-D-O in $HCrO_2$ and $DCrO_2$ 2=6203
- OH... O systems, H bonds rel. to vibration wave functions 2=12315
- O-N or O-P nature rel. to diamag. susceptibility 4=30460
- O-O, bond-order/bond-length relation, orbital theory calc. 0=5980
- O_2, lengths, by electron diffraction 2=22960
- O_4^+ ion clusters, bonding 4=17319
- Os complexes, X-ray abs. studies 0=20672
- $[Os(NH_3)_6]Br_3$, Os bond determ. by L_{III} absorption spectrum 2=14693
- PCl_3, bond distance vibrs. 2=8083
- $P^{31}—H^1$ coupling in organo-phosphorus cpds 4=3915
- PO, symmetric, asymmetric stretching freqs. 3=12838
- P_2O_5, electron diffraction study 0=17855
- Pr, in La cpds., covalence change 3=23072
- Pt-S, in dithiocarbamato Pt^{II} complex, stretching bands and force constant 3=25120
- $Rh(CO)_2Cl$, metal—metal bonding 1=11573
- Rh-F, in RhF_6, interbond distance 4=17292
- Ru-F, in RuF_6, interbond distance 4=17292
- S molecules, d orbit construction unnecc. 4=25682
- S, orthorhombic, bond length 2=8823
- SCN, S-C, C-N angle/length rels. 4=20084
- S-N, bond order versus length reln. 3=727
- S—O in SO_3^{2-}, stretching frequency 4=28231
- S-O in SO_4^- ion, rel. to i.r. absorption bands in $Cu[Na]SO_4.5H_2O$ 4=4255
- S_2F_2, bond angles and distances 4=3879
- S_4N_4, S-S and N-N 3=727
- S-S, structure and reactivity 2=6207
- S-S in FeS_2, CoS_2, NiS_2, length variation 0=16322
- S_6 1=20531
- S_8, and S organic cpds., bond energy and next-nearest-neighbour interactions 0=1512
- Sb—Br, energy, from heat of vapourization, $SbBr_3$ 3=21629
- Sb—I, energy, from heat of vaporization, SbI_3 3=21629
- Sb—S in stibnite 3=11128
- Se, chemical and intermetallic, effect on K absorption spectrum 2=23582
- Si-alkyl groups, optical study 2=18843
- Si, review 4=28413
- Si-transition metal, spd-hybrid localized, degree of polarization 4=6679
- Si—C strength, in methyl—fluoro—silane series 3=20011
- SiC, ionic and atomic contrib. 2=20899
- SiC, ionic and atomic contrib. 3=6451
- SiC, rel. to $A^{III}B^{V}$ cpds. and ZnS 3=2688
- Si-O in Si crystals 1=17712
- Si-O, in silicates, nature 1=20565
- SiO_4 complex, Si-O bond 2=8539
- Si-O-Si bond angles 2=10897
- $SiR_aH_bX_c$ where R is alkyl and X halogen, and mag. props. 4=30467
- Si-Si in solid, strength 3=25177
- Sn-organic cpds, rel to Mössbauer spectra peculiarities 3=744
- Sn organic cpds., Sn-Sn and Sn-C bonds, Mössbauer effect 4=25717
- Sn, rel. to splitting and shifts of Mössbauer lines 4=28323
- TaB_2, quadrupole bond, n.m.r. meas. and calc. 3=11121
- $Ta_6Cl_{12}^{2+}$ 3=8281

Bonds—contd
- Ti cpds., X-ray spectra, emission, $K\beta_5$ line changes 3=23092
- TiB_2, quadrupole bond, n.m.r. meas. and calc. 3=11121
- TiN, ionic binding, rel. to phys. props. 1=14870
- TiN, ionic binding, rel. to phys. props. 1=20353
- TiN, metallic 3=8331
- TiN, metallic bonding 2=14350
- TiN, metallic, and chemical reactions 4=22451-2
- TiO_2, chemical, rel. to Hall effect anisotropy 4=10072
- U carbides, numbers 3=20843
- U-O, force const., in UO_2^{2+}, from $K_3UO_2F_5$ spectrum i.r. 3=22575
- U_2Se_3, covalent nature, evidence 2=3771
- U_3Se_4, covalent nature, evidence 2=3771
- V^{3+} salts, hydrated, mol. orbital theory of ligand field 4=20520
- W nitrides 3=13462
- X-H-Cl, rel. to charge transfer force 2=2723
- Xe fluorides, rel. to chemical shifts 4=20074
- Xe fluorides, wavefunctions 3=17589
- Xe—F in XeF_4 3=12868
- XeF , Xe—F distance 3=16075
- XeF_2, Xe—F distance 3=16074
- XeF_2, XeF_4 3=20000
- XeF_2, XeF_4, binding mechanism 3=15257
- XeF_4 3=12844
- Xe—O in $XeOF_4$, double character 3=17590
- $ZnCl_2$ and ZnF_2, from deflection in inhomogeneous elec. field 4=22378
- ZnO crystal, polar props. perpendicular to c-axis 4=6680
- ZrB_2, quadrupole bond, n.m.r. meas. and calc. 3=11121
- Zn—C, in $Zn(CH_3)_2$ 1=844
- Zr—O crystal, cohesive energy, Ligand field treatment 4=9807

Bone
- acoustic propag., review and work of Békésy 3=3668
- sonic and u. s. freqs. conduction 4=4981
- Sr^{90} content (U.K. 1956) 0=7502
- ultrasonic absorption 0=16791

Books

(Heading introduced in 1961).
- adsorption and collective paramagnetism 3=20995
- air chemistry and radioactivity 4=10698
- Astronautics, handbook 1=18211
- atmospheric physics 4=10695
- bibliography of interlingual scientific dictionaries 1=6757
- biology, physico-mathematical aspects 2=24196
- biology, physico-mathematical aspects 3=13941
- Bourbaki relativity 4=24034
- celestial mechanics 1=6691
- cloud thermodynamics 4=137879
- comets, nature of, by Richter, translation 3=13868
- cosmic debris 2=6979
- cosmic rays, geophysical and astrophysical aspects 4=26884
- cryogenics, progress in 2=1321
- crystal electron energy band theory 4=22536
- crystal twinning, mechanical 4=7528
- crystallization kinetics, effects of ultrasound 4=10463
- dictionary, English—German, of pure and appl. physics 4=14002
- dictionary of physics and electronics 1=8031
- dielectrics, progress in 1=5413-14
- dielectrics, progress in 1=8293-4
- dielectrics, progress review 3=22970
- dispersion relations and abstract approach to field theory 1=19082
- dosimetry of neutrons and neutrons + γ rays 1=13233
- e. s. r. in solids 4=30729
- elasticity, anisotropic 1=14840
- electricity and magnetism 1=1864
- elec. and mag., British textbooks 2=19821
- electronic theory of catalysis on semiconductors 2=15143
- elementary excitations in solids 4=9803
- elementary particle physics 1=13364
- elementary particle theory, complex angular momenta 4=9058
- elementary particles 4=21740
- elementary particles 4=25049
- fast reactors 1=12233
- ferrites at microwave frequencies 4=8921
- field computations 1=9245

Books—contd
field theory, quantum 4=21720
field theory, quantum, interactions, weak 4=21771
fluctuation phenomena, statistical models 4=8078
fluid dynamics 2=21867
free radical stabilization at low-temp. 1=14109
gases, real, theory 3=11816
general relativity and grav. waves 3=24
geophysics, applied 3=3424
German–English dictionary 4=5002
Gorgèse Lectures in Theoretical Physics, 1962, many-boson systems 4=8107
gravitation theory, series of articles 4=8028
Handbook of Chemistry and Physics 1=8032
heat conduction in semiconductors 2=3852
heat transfer bibliography 3=7346
high-pressure physics and chemistry, collected papers 4=27002
Indian Inst. of Science Golden Jubilee Volume 1=2678
internal friction in metals and alloys 4=7372
interstellar communication with advanced societies, collected papers 4=15901
ionization dosimeters, effect of variations in ambient air 1=8405
Laplace transformations 1=5113
Linear Differential operator 1=17980
low temperature physics, collection of articles (1964) 4=24463
luminescence of crystals 3=6664
magnetic ions in insulators, Academic Press (1963) 4=20521
magnetism, modern theory and materials (Vol. 3) 4=7206
masers and lasers 3=14795
masers, optical 4=16681
mathematical methods of physics, textbook 4=27014
mechanics, advanced math. treatment 3=1642
mechanics, matter and waves 1=6806
mechanics, theoretical and experimental Vol. I 2=15503
meteorological glossary of HMSO 4=10696
meterology 2=6906
Monte Carlo method for random walk problems 1=2585
noise, statistical properties 3=11871
non-destructive testing, progress 1=9238-9
non-destructive testing, progress 1=11667
non-destructive testing, progress 1=21155
nuclear emulsions, techniques and theory 4=11865
nuclear energy, concise encyclopaedia 3=4285
nuclear handbook 3=2146
nuclear pairing force correls. and collective motion 4=16991
nuclear physics, elementary 1=7162
nuclear physics and radiochemistry, experimental treatment 1=4744
nuclear reaction kinematics 4=12193
nuclear reactor materials 1=4884
nuclear science and technology, advances 3=2511
nuclear science and technology, collection of papers 4=25451
nuclear shell theory 3=12545
optical phenomena, photographs 3=257
partial differential equations and continuum mechanics 1=7966
phonons and phonon interactions, lectures, Aarhus 1963 4=30505
photoelectrets, electrophotographic process 3=15622
photometry 2=15714
physics and archaeology 1=6756
physics of lightning 4=17900
physics of plastics 2=23023
pion physics 1=12095
plasma theory 4=24627
progress in cryogenics 1=13029
progress in optics 1=18544
quantum mechanics 1=6779
quantum mechanics, mathematical foundations 4=16032
Radiochemical Manual (I), Physical Data 2=13699
Raman spectroscopy 2=13451
Ray Lee Edwards ceremonial volume 2=17332
relativistic kinematics 4=8038
relativity, general, and gravitation, US view 4=11050
relativity for non-specialists 2=19
relativity, special 1=11695

Books—contd
satellites, torques and attitude sensing, collection of papers 4=29493
semiconducting III–V compounds 1=17671
semiconductor physics 1=2403
semiconductor progress 2=14513, 18670
shock tubes 1=18459
solid state, theory 4=22446
solids, quantum theory 4=9802
sound absorbing materials 1=12957
statistical thermodynamics, elements of 3=7134
stochastic processes 1=4180
superconductivity 3=325
superconductivity, theory 4=24481
tensor calculus 3=5318
tensor calculus and relativity 3=31
theory of neutral and ionized gases 1=6800
theory of neutral and ionized gases 1=18296
thermal physics, student textbook 4=8084
ultrasonics and colloids 3=6936
units, dimensionless numbers and scales, dictionary 4=5004
units, national and international, dictionary 4=18011
upper air observations, instruments 1=20807
vacuum and electronics, applied physics 4=8581
vacuum technique 2=5075
X-ray crystallography, principles 1=9121

Boron
activation energies in monocrystalline β-rhombohedral B 4=25897
alpha-particles, energy loss and range 2=16249
amorphous, use as pressure vessel for high-press. X-ray diffr. studies 2=8811
atom, ground-state wave function and energy 2=6080
atom, 1s^{2}2s2p^k configs., analytic self-consist. field functions 4=15273
atom, unrestricted Fock calcs. 4=1207
atomic wave-functions 2=8059
atoms, B^{11}, hyperfine consts., calc. 2=22898
atoms, collisions with inert gases, electron capture and loss 0=7079
atoms, exchange polarization effects in h.f.s. 1=12238
atoms, polarizability, dipole, calc. 0=9736
atoms, scatt. of electrons 0=11504
atoms, scattering of 60 keV electrons 0=11505
in BeO single crystals, e.s.r. 4=26378
bonds with NHR and NH$_2$, magneto-optic meas. 4=15343
crystal lattice dimensions, new polymorph 4=4601
crystalline, loss of structure on pulverizing 1=6513
crystals, coordination number changes 2=8870
crystals, pure, preparation 3=11226
diffusion in graphite 3=13000
diffusion, into graphite, solid solution formation 0=20841
diffusion in rutile 4=1505
diffusion in Si 1=14315
diffusion coeff. in Si 1=14301
diffusion in Si, conc.-depend., calc. 4=9993
diffusion in Si, distrib. 3=22822
diffusion, in Si, ion bombarded 3=22823
diffusion into Si, 950°-1375°C 0=6058
diffusion in Si, 1100° to 1300°C 4=20303
diffusion in Si through oxide layer 3=10690
diffused in Si, redistribution due to oxidation calc. 4=25967
diffusion into Si, through Si oxide layer 3=8453
diffusion in Si through SiO$_2$ layer, anomalous 3=17789
diffusion into Si, surface conc. 4=4077
diffusion in Si to thin layers, concn. profile 2=23208
diffusion through SiO$_2$ to Si, segregation coeff., p–n jn. method, two-boundary method 4=30578
dislocations in Si due to boron solute diffusion 1=14270
electrical and optical properties 0=560
films, prep. and props. 3=18411
films, self-supporting, preparation 4=7706
films on Si substrate, preparation 4=15818
films, on thin C backings, prep. 3=11319
floating-zone refining by electron beam melting 2=10800
gettering effect on Si p–n junctions 0=18032
impurity in Si, spectrochem. estimation 1=19864
ion, B$^-$, electron affinity and stability calc. 4=9643
ion bombardment, absorpt. range for 50-500 keV 2=9645
ions, bombard. of Cu–Be electron emission 0=267
isotope exchange reactions for enrichment 0=17675
isotope separation 4=10633

Boron—contd
- isotope separation, $B^{10}F_3$—$B^{11}F_3$, enrichment coeff. meas. 3=15307
- isotope separation, methyl sulphide-BF_3 system 0=17676
- isotope separation in phenol-BF_3 system 1=11611
- layers, electron bombardment deposition and vacuum weighing 4=10611
- Li–B ion pairing, effect on Li^+ drift in Si 0=15940
- mass spectra anal. 0=9098
- in meteorites, and B^{11}/B^{10} ratio, and in earth 3=13876
- molten, density and surface tension 4=132
- n.m.r., amorphous, α and β rhombohedral 3=20678
- neutron absorption, long-wavelength cross-sections 1=16812
- neutron absorpt., thermal, precise meas. 3=12694
- neutron irrad. damage 2=18625
- paramagnetic resonance, rel. to C content 3=11110
- phosphors, temp. effects 2=23590
- poison in water, thermal neutron diffusion 2=3349
- polymorph, structure 0=10310
- for reactor control rods, B–Ti dispersions 0=14057
- redistribution in Si due to oxidation 2=21071
- resistivity rel. to pressure up to 3×10^5 kgm cm^{-2} 3=2902
- rhombohedral modification, crystal structure 3=13449
- in Si, i. r. absorpt. impurity lines, width and temp. depend. 4=28673
- in Si, rel. to localized vibr. 4=17346
- single crystal growth, by zone melting 1=14989
- solution, effect on neutron source absorption 4=19519
- spectrum, in Si, compensated, i. r., vibr. absorpt. 4=4274
- stress—strain yield plateau on addition to α-Fe 3=13357
- sublimation, heat of, and dissoc. of B_2 3=305
- sublimation, pressure meas., Langmuir, 1781-2152°K 4=5468
- synthesis, early history of solar system 1=10373
- thermal conductivity, 4°-300°K 3=25211
- thermoelectricity, elec. conductivity 2=21149
- thin films prepn. for neutron cross-section meas. 3=11321
- thin films, self-supporting, prod. 2=4488
- use in three ionization chambers 0=5443
- vacuum evaporation, electron bombardment apparatus 4=14224
- valence electrons, approx. wave-finctions 0=469
- valence orbital structure, systematization with higher borides 0=13515
- volatilization, in d.c. arc 3=19220
- X-ray (soft) emission spectra, with photon-counting spectrometer 1=7439
- X-ray yield, on electron bombard. 2=14697
- zone refining 0=707
- B^{10} in neutron flux, irradiator use 0=1610
- B^{10} powder, n-irradiation, sintering 1=14351
- B^{10} production, low-temp. distillation of BF_3 0=19576
- B^{10}, thermal neutron absorption cross-section 2=5683
- $B^{10,11}$ ions, energy loss in Ni, O_2 and nuclear emulsions 0=17051
- B^{12}, β-rays polarization 2=7943
- $B^{15,17,19}$, predicted new isotopes 0=13396
- B I atom spectrum, meas. 2=14191
- B ions in solids and gases, range and energy loss 2=7674
- B^+, double change exchange in inert gases 0=14978
- B III possible identification in O-type spectra 0=6618
- B^{2+}, specific isotope shift calc. 3=10456
- B^{3+}, 2^3S state, 20-parameter calc. 3=2561

Boron compounds
- alkyldiboranes, i.r. spectra 0=20634
- aqueous boron minerals, i.r. spectra 1=8995
- Boral, thermal neutron diffusion 2=7862
- borate glasses, alkali, B n.m.r., var. composition 3=18147
- borates and boric acid, in nuclear reactors, boiling, distrib. 4=15253
- borates, fused, viscosity and free vol. 4=2663
- borates, glass-forming, structure and physical props. 0=8252
- borates of group II elements, Tl activated luminescence 2=6596
- borates, lead-activated, u.v. emission spectra 0=4435
- borax, fused and seeded, thermoluminescence 2=10634
- borax, n.m.r. of B^{11} 3=15963
- borax, proton cond., polariz. effects 3=8483
- borax, proton conductivity 3=2904
- borazates, dielec. props., ferroelec. 4=22773
- boric acid glass, aromatic-doped, X-irrad., e.s.r. 4=13742

Boron compounds—contd
- boric acid, photocond. 2=8434
- boric anhydride, Raman spectra, rel. to B coordination transitions, rel. to Na_2O content 4=20449
- borides, higher, valence orbital structure systematization 0=13515
- boron steel, effectiveness as control rod in reactor 2=18380
- boro-organic cpds., use as nuclear reactor poisons 4=22267
- borosilicate glass, granular structure, by electron microscopy 3=13545
- boroxine, gaseous, equil. with fluoro derivatives 2=19140
- deuterated boric acid solns. for neutron absorption meas. 1=16808
- diborane ($B^{11} \rightarrow B^{10}$), vibrational freq. shifts, isotope effects 4=28213
- diborane, deuterated, heat of formation 2=10973
- diborane, photolysis at 1849A 2=19157
- diboranes, B^{11} labelled, i.r. spectra 4=1272
- M^{2+} borates, atomic crystal structure 4=15787
- metaborates, gaseous, properties 3=25807
- metal hexaborides, n.m.r. of B^{11} 3=20677
- n.m.r. study of bonding 0=3138
- neutron irrad. damage of all cpds 2=18625
- orthoboric acid, O—H...O bond 1=14077-8
- phosphors, phosphorescence decay rel. to temp. 1=10119
- with terbium 0=1502
- tincalconite, n.m.r. of B^{11} 3=15963
- tourmaline, electron polarization effect meas. 4=17821
- B.B.B.-trichloroborazole, polarity of substituents 0=3256
- 21 new powder diffraction patterns 0=18355
- vitreous borates, structure, similarity to high temp. crystals of same composition 4=2136
- B alloys, neutron effects, and crystal structure 4=10007
- carbide, effect on (n, γ) reaction in steel 2=8045
- B carbide, energy gap, elec.-cond., temp. depend. 2=8354
- B carbide, neutron spatial and energy distrib. 2=1692

polarization calc. in nuclear field by equiv. photon method 3=2237
polarization, circ., depend. on Z 3=22101
polarization, circular, from e—polarized p collisions 3=12435
polarization, circular, by longitudinally polarized electron 1=16744
polarization by γ—He^4 elastic π^0 photoproduction 2=5615
polarization, plane, of 15.1 MeV rays from 25 MeV electrons 0=3950
polarization, rel. to primary electron screening and scattering 1=13387
polarized beam prod. and props. 0=5594
polarized, by crystal, on electron incidence 3=5980
from polarized electrons in nuclear Coulomb field, diff. cross-section, calc. 2=22475
polarized, 20.5 MeV 2=425
positron annihilation (650 MeV) in propane 2=5626
from positron beams, separation from annihilation radiation 2=3321
positron depolarization 4=19492
positrons and electrons at 8.5 MeV, spectra compared 1=2044
production in BeV range, nuclear size effect 4=877
production by longitudinally polarized electron—proton collisions 0=15326
production, by μ-mesons in Pb and Fe 2=16217
production, by photons on Coulomb centre 0=9329
production, relativistic wave-function 0=15286
in propane, 600 MeV, e$^+$, e$^-$ 4=30212
protons, bombarding nuclei 3=14947
at protons, differential cross-section, anom. proton mag. moment 1=10871
from protons, effect of form factor and "meson" jacket 0=2538
quantometer, for meas. of energy flux 1=5709
quantum electrodynamics 1=5637
quasi-real processes calc. 0=1266
from radiation belts, as source of X-rays? 4=23791
radiation due to accelerated electrons in synchrotron 1=1944
radiation on light substances rel. to electron spectra 2=5886
radiation from relativistic particles in heterogeneous medium 1=8414
radiation units and critical energies for various substances 4=6012
rel. to photon transport theory 1=18315
resonant diffusion study 2=13999
ρ-meson decay, inner bremsstrahlung 4=6124
scattering, by Al^{27}, 2·21 MeV level, resonant, ang. distrib., and spin and parity 4=6224
scatt. expts. with C^{12} and Mg^{24} 1=13763
scattering, with resonance, by light and medium-weight nuclei 1=2168
scattering, 12.5 MeV, by Mg 1=220
second Born approximation 1=478
shielding using plexiglass and lead 4=3586
solar flare burst, obs. and sunspot group origin 1=18094
source, 20 MeV pulsed 2=9659
sources for 0-18 keV, tritium absorbed in Ti or Zr 4=6014
Sommerfeld's theory, generalized, with relativity effects 0=3949
spectra corrected for target multiple scattering 0=17291
spectral distribution, in Coulomb field 1=7228
spectral distribution from an ionized gas 0=1265
spectral shape, near upper limit 3=24684

Bremsstrahlung—contd
- spectrum of beam from Frascati electron synchrotron 0=15099
- spectrum, in scattering of electrons by Coulomb fields 1=4789
- spectrum of Frascati electronsynchrotron 1=5524
- spectrum from thick targets, angular dependence 0=7327
- spectrum, for 260 MeV electrons 2=13767
- strontium (Sr^{90}) enamel source 1=16742
- suppression effect 0=20101
- synchrotron energy flux 2=15972
- synchrotron radiation, in mirror machines 1=7084
- theory 0=17290
- theory, fast charged particle scattered in medium 4=19478
- in thickness gauges 2=9227
- from 30 MeV betatron, spectrum meas. 0=12657
- two-fermion interaction, quantum, limiting process 2=3244
- from ultrarelativistic electrons in crystals 4=1445
- of ultrarelativistic electrons, quantum absorption effects 4=16871
- use in tritium β-ray decay 1=19399
- Weizsäcker–Williams formula, covariant deduction 2=3308
- X-ray, in betatron, 35 MeV, production 3=5983
- X-ray bursts in upper atmosphere 2=15263
- X-ray, intensity max., prematureness 0=5536
- X-ray, ultrasoft, use for absorption spectra 3=4232
- X-rays, by electron in Au, 1-2 MeV 2=22476
- yield curves, second-difference analysis 1=480
- Au foil, emission, rel. to electron bombardment 3=20536
- Au, Ta and Ag relative cross-sections 0=20102
- B^{11}, resonant scatt. by 2.14 MeV state 3=15171
- Ba^{137}, 2-quanta transitions, probability 0=17522
- Ca^{45}, beta-rays, internal, spectrum 3=22327
- Cl^{36}, internal bremsstrahlung accompanying electron-capture decay 4=1042
- Cs(γ,p) and I (γ,p) reactions in CsI: Tl crystal 1=2204
- Ge, spectrum isochromat structure 3=8611
- from H plasma 1=7053
- He^4, electric dipole weighted cross-section 2=18240
- in $K^+ \rightarrow \pi^+ + \pi^0 + e^+ + e^-$ 1=19262
- in $K^+ \rightarrow \pi^+ + \pi^\circ + e^+ + e^-$ 2=22618
- LiH beam hardener 0=2517
- N, and electron scatt. elastic cross-section 4=15299
- O, and electron scatt. elastic cross-section 4=15299
- O, free–free continuum 0=20587
- P^{32}, β-decay, internal effect meas. 2=14027, 20547
- P^{32} β-rays in Au 1=13383
- P^{32}, internal 0=17549
- P^{32}, internal 2=10045
- P^{32} and Y^{90} internal auto-ionisation lines 0=2518
- in Si production at ~ 1 GeV, orientation effect 0=12899
- Si, spectrum isochromat structure 3=8611
- Sr^{89}, β-rays, internal bremsstrahlung meas. 2=18284
- W, bremsstrahl-isochromat, structure of short-wave limit 0=20593
- Y^{90} β decay 3=12626
- Y^{90}, β decay, first forbidden, internal, circular polarization, calc. 3=22332
- Y^{90}, beta-rays, internal bremsst. meas. 4=6282
- Y^{90} beta-rays, polarization obs. 2=3517
- Y^{90}, internal 2=10045

Brightness
- See also Illumination.
- brightness sensation, rel. to object luminescence 1=6680
- candela, reproduction by secondary standard tungsten filament lamps 3=9317
- clouds, spatial distrib. 3=18509
- distribution in photographs 1=6945
- flashes, adjacent, matching, rel. to overlap 2=24209
- helical filament, colour temp. 1=6979
- heterochromatic, rel. to Stiles' coulour-mixture functions 2=1245
- laser angular, improvement, through diffr. coupling 4=30085
- radial distribution, in cylindrical luminous medium, with self-absorption 0=14786
- solar prominences, comparison with surface 2=4787
- spark discharges in He, N_2 and A 1=5428
- spark discharges in He, N_2, and A 1=10681
- sparks, electric, peak, 4500-3000 A 3=4053

Brightness—contd
- stars, rel. to neutrino pair formation from photons 2=3299
- stars, rel. to neutrino pair formation from photons 3=2232
- sun, corona, distrib. for 20th July 1963 eclipse 4=29460
- temp. meas., using photomultiplier 2=11522
- true indicatrix recovery, 2D problem 4=27282
- tungsten ribbon, distribution profile 4=11324
- upwelling natural light from ocean 1=20804
- vision, discrimination, body position effects 4=2494
- vision perception, scatter mechanism 4=10988

Brittleness
- See also Mechanical strength; Fracture.
- in abrasion of brittle solids 3=11188
- α-brasses, embrittlement process by liq. Hg 3=13378

- metals, b.c.c., rel. to recrystallization 3=18214
- metals, fracture, theory and exper., review 1=3998
- metals, due to hydrogen adsorption 2=8744
- metals in tension, embrittlement, fracture 2=23783
- mild steel, embrittlement by cyclic stressing 0=16242
- notches, theory 4=20634
- polymethylmethacrylate, brittle fracture 3=3235
- polystyrene, high press. var. 4=23198
- Shock wave-front, on explosion 3=23970
- Smekal's theory, extension 0=16238
- steel, austenitic, influence of martensitic deformation 1=10214
- steel, brittle fracture surfaces, plastic deform. 2=21442
- steel, carbon, rel. to cyclic loading 2=16966, 21439
- steel, due to H adsorption 2=8744
- steel, effect of H adsorption 2=14908
- steel, by external H_2 atm. at room temp. 2=19009
- steel, irrad., brittle fracture 2=23770
- steel, rel. to neutron irrad. 3=11181
- steels, internal strains, distrib. in grains and grain boundaries 4=26529
- steels, Mn–Mo, rel. to neutron irradiation 3=11182
- tensile strength of brittle materials 1=7828
- tensile strength meas., brittle materials 0=4546
- thermal fatigue investigation 2=23794
- thermal shock behaviour of brittle materials 1=11172
- transition metals, b.c.c. theory 1=11506
- transition metals, rel. to neutron irrad. 3=8784
- Zircaloy-2, reduction of heat treatment 4=10994
- AgCl, ductile–brittle transition 0=21145
- AgCl, ductile–brittle transition 4=23204
- Al alloys at low temps., meas. 2=19010
- Al, impurity films at grain boundaries 2=19011

Brittleness—contd
- Al—Mg(4.5%), in Hg, strain ageing as for precipitation hardening 4=17723
- Al_2O_3 abrasive grains, tensile strength rel. to size 1=20380
- Be, above 500°C, deformation 4=1930
- Be, rel. to ageing at 600°C 2=4341
- Cd, rel. to surface-active Ga coating 4=10353
- Co—Fe alloys 0=3271
- Cr alloys, carbide strengthened, ductile—brittle transition temp. 4=30771
- Cr, brittle—ductile transition, effect of N concentration 4=23134
- Cr, ductile—brittle fracture, effects of C, N, O and S 4=30770
- Cr, ductility, effect of rolling temp., strain rate 3=3236
- Cr, effect of hydrostatic press., up to 10^4 atm 4=23133
- Cr extruded, brittle fractures, X-ray examination 0=8130
- Cr, -196° to +900°C 1=20373
- Cr, recrystallization embrittlement process 3=16005
- Cr—1%V alloy, rel. to strain at 200°—600°C 2=8771
- Cu, caused by introduction of H_2 4=13430
- Cu-base alloys 1=6522
- α-Fe, brittle fracture and twinning 2=21468
- α—Fe, ductile-brittle transition, dislocation locking effect 0=20811
- Fe, due to introduced H_2, recovery 0=20723
- Fe, pearlite-free, fracture 2=23786
- Fe, rel. to neutron irrad., damage 3=8759
- Fe single crystals 1=20381
- Fe, single crystals, brittle fracture conditions 0=18281
- Fe, zone refined, at low temp. 0=16243
- Fe—Al—Mo—Si alloy 4=13383
- Fe—Co(2% Va), variation with temperature due to superstructure 1=14700
- Fe—Si(3%), on plastic deformation, and crack nucleation 4=13412
- Fe—Si rolled strips, anisotropy 3=3238
- Ge and Si diffused layers, rel. to thickness determ. 2=12941
- KCl—KBr, temp. effects 4=4484
- LiF ductile-brittle transition 0=21145
- MgO ductile-brittle transition 0=21145
- MgO, neutron damage effects 3=25310
- Mo, cracks, nucleation on twin and grain boundaries 3=6803
- Mo, deformation processes, 4.2—700°K 2=23755
- Mo, with different surface finishes, cold brittleness 0=6317
- Mo, ductile—brittle transition 2=6752
- Mo, ductile-to-brittle transition temp., rel. to stress rate type 4=13427
- Mo, 4.2—700°K 2=23754
- Mo, zone-refined, 4·2° - 373°K 3=1236
- NaCl crystals 0=10262
- NaCl, ductile-brittle transition 0=21145
- NaCl, effect of ambient air 0=1872
- NaCl, effect of surface steps on crystal surfaces 1=3995
- NaCl single crystals, ductility, effect of atmospheric reaction 3=13355
- Nb, embrittlement by surface gas contamination 3=20755
- Nb in H_2 atmosphere, rel. to O_2 in solid solution 4=1958
- Ni, caused by introduction of H_2 4=13430
- Ni, effect of dissolved H 3=11153
- Sn crystals, Ga-coated 0=6313
- Ta, due to H, influence of absorbed N and rate of deformation 3=6804
- Ti containing H, ductile-to-brittle transition temp. 4=10403
- Ti, due to H adsorption 2=8744
- U, ductility after work-hardening, partial annealing 3=6795
- α-U, effect of Fe and Al on ductile/brittle transform; —183° to 350°C 4=28987
- UC 4=13611
- U—Mo alloys 4=20686
- W, cast, effect of recryst. anneal 3=11183
- W, ductile—brittle transition stress/strain curves 3=23307
- W rods, notch—impact behaviour, ductile—brittle transitions 4=30789
- W, vacuum annealed 0=16241
- W alloys, ductile-to-brittle transition temp. 4=23220
- W—Co alloys, fracture rel. to composition 2=23780
- Zn, amalgamated, brittle fracture 2=2334
- Zn, embrittlement by liq. Hg 3=16006
- Zn single crystals 0=6316
- Zn single crystals, temp. transition to plasticity 3=23316

Brittleness—contd
- Zn—(0 to 0.5%)Cd, fracture rel. to surface phenomena, —200°C to +200°C 4=10363

Bromine
- acoustic absorption, liquid and solid 3=9458
- adsorption on Zr of Br^-, Zr surface treatment effects 4=13696
- aq. soln., Raman spectrum rel. to water 2=5022
- atmospheric content. 3=25868
- atom, recombination rate constants, three-body 4=17852
- atomic structure 3=12755
- atoms, paramagnetic resonance and electronic g-factor 1=3932
- atoms, recombination mech. 3=6427
- bond electrons, overlap factor 0=2738
- double ionized, structure and spectrum 1=19587
- effect on props. of Se rectifiers 0=6125
- electron affinity 0=2783, 20741
- electron scattering, pattern inversion 2=3760
- ionization and dissociation, by electron bombard. 0=7739
- ionization by photon impact, efficiency 0=17720

- single crystals, shaping and polishing 4=30812
- skin effect, static, 4.2° to 78°K 4=10023
- spark discharge, ion concn., time variation 3=2553
- spark spectrum, wavelength shift meas. 1=3511
- specific heat, 0.1°—4.2°K analysis 4=15426
- specific heat, 1.3-4.2°K 1=3607
- specific heat, 1.5-4.2°K, Debye temp. 3=2733
- specific heat and supercond. transition 2=6279
- spectra, Cd I, II, in submerged spark, press. effect of foreign Zn 4=25497
- spectrum arc and vaporization, var. with sample composition, using radioactive Cd^{115} 4=484
- spectrum, emission, 1.6-3.7μ 3=15281
- spectrum, red line contour, atomic beam meas. 0=11508
- spin—orbital coupling in electron band structure 3=10626
- spin—spin coupling with protons 3=719
- stress effects, cyclic, ductility, and dislocation 4=10372
- structural and mech. props. rel. to liq. Ga coating 4=10353
- structure distortions 0=7879
- in sulphide minerals, spectrochemical analysis 4=30913
- superconducting, pressure and volume effects, crit. mag. field, Fermi surface 1=258
- superconducting, thermal cond., anisotropy 1=18724
- superconductivity, isotopes 3=12030
- superconductivity, pressure depend., up to 27 000 atm 4=401
- tensile props. of polycryst., −196° -200°C 3=6800
- thermal cycling effect on mechanical, elec. props. 2=23776
- thermal cycling effect on mechanical, elec. props. 3=3233
- thermal expansion at low temp., expt. 4=17369
- thermal expansion, 1.5° to 12°K 4=9864
- thermal expansion, 1.5-12°K, electronic and lattice contribs., and Grüneisen parameters 4=17370
- thermal expansion, 10-300°K, negative below 20°K 4=12655
- thermal vacancies, formation energy specific resist. 1=11192
- thin films and crystals, optical and photoelec. props. 4=22849
- twinning, during vapour growth, dendrite structure 0=21169
- ultrasonic resonant absorpt. by open-orbit electrons 2=16601
- ultrasonic vel., Rao's const. 2=15589
- vacancies, formation energy and conc. 1=7575

Cadmium—contd
- vaporization in arc, electric, var. with sample composition 4=484
- vapour, coherent excitation by electron impact 4=25536
- vapour, in flames and inorganic cpd. vapours, anomalous excitation 4=9658
- vapour pressure of solid, 200-290°C 6=13472
- vapour, resonance light scatt., modulation 4=6499
- on W, adsorption, migration, evaporation 1=20693
- X-ray continuous spectrum, Ohlin structure meas. 4=4242
- zone refining 2=23825
- Cd^{109} atom, $(5s5p)^3P_1$ state, spin and nuclear moments 3=19931
- Cd^{111} nuclear resonance fluorescene 2=7955
- $Cd^{111,113}$ atoms, $(5s5p)^3P_1$ state, level crossing 2=14193
- Cd^{113} in metallic Cd, n.m.r. line shift, 77°-615°K 4=23066
- Cd^{114} spectral wavelengths 1=8814
- Cd 5^3P_1, resonance, r.f. field at twice Larmor freq. parallel to static 4=15276
- Cd I spectral lines, oscillator strengths 1=13953
- Cd I, spectrum, h.f.s. and intercomb. lines 2=16480
- CdI triplets, intensity at different excitation conditions 0=17703
- CdI, 2288A line, isotope shift 2=6093
- Cd I, λ3261, absolute oscillator strength 4=22302
- Cd II free ions, mag. dipole resonance 0=2715
- Cd^{2+} electrochemical system, kinetic study 2=12976
- Cd—Al liquid system, partition of solutes 2=1955
- Cd—$CdCl_2$ liquid system, mag. susceptibility 2=19580

Cadmium compounds
- binary phosphate glasses, properties 0=21216
- bis-ethylenethiourea-Cd thiocyanate, crystal structure 0=6367
- film formation by co-evaporation method 4=29183
- Cd acetate trihydrate, crystal structure 2=6815
- Cd acetate, u.s. vel. 2=15589
- Cd alkyl cpds., proton resonance spectra 2=2024
- Cd alloys, hardness rel. to temp. 2=23792
- alloys, impurity electronic structure 3=22757
- Cd amalgam, u.s. velocity 2=7210
- Cd amalgams, viscosity and elec cond. 1=11757
- Cd amalgams, viscosity, elec. cond., density 1=12872
- borate, Mn-activated, luminescence 1=6222
- Cd chalcogenides, ternary, photoelectric properties 1=11321
- chlorophosphate, Mn-activated, luminescence 1=6222
- Cd, dihalides, linear symmetrical amplitudes of vibr. and Bastiansen—Morino shrinkage effect 4=30441
- Cd ferrites and chromites, ferri- and paramagnetic resonances 1=20189
- Cd with GP IB and IIB metals, Knight shift 1=11494
- Cd halides, Cd visible spectrum, rel. to complex formation 4=22375
- Cd hydroxide, void prodn. by vacancy aggregation 4=12830
- Cd oxide pressed powders with excess Cd or O, thermoelectricity, conductivity, electrical 3=22940
- Cd pyroniobate, temp. depend. of elastic and piezoelectric props. 4=4459
- silicate, Mn-activated, luminescence 1=6222
- Cd sulpho-selenide solid solns., imperfections, photoelectronic props. 4=12987
- telluride, p—n junction photocells 0=11723, 15948
- Cd—Ag, tensile props., −196° -200°C 3=6800
- $CdAs_2$ cpds., electrical and optical properties 1=17670
- $CdAs_2$, cyclotron resonance 0=1571
- $CdAs_2$, cyclotron resonance 2=23133
- $CdAs_2$, energy band structure, review 2=12502
- $CdAs_2$, n-type, galvanomagnetic props. 1=7645
- $CdAs_2$ preparation and properties 1=14462
- $CdAs_2$, semiconducting props. 1=2416
- Cd_3As_2, Cu doped, elec. props. analysis 3=2906
- Cd_3As_2, electron scattering by acoustic photons 2=6266
- Cd_3As_2, Hall mobility of 36 000 cm^2/volt-sec 0=603
- Cd_3As_2, n-type, elec. props. 2=23374
- Cd_3As_2 preparation and properties 1=14462
- Cd_3As_2, semiconducting props. 1=2416
- Cd_3As_2, thermoelec. and elec. props. 1=17811
- Cd_3As_2, vaporization, nonstoichiometric, mass spectrometric study 4=24457
- $CdBO_4$, luminescence, field stimulated, absence below 2×10^4 V/cm 2=12629
- Cd-Bi alloys, thermally cycled, dimens. growth coefficient 4=28376

Cadmium compounds—contd
$CdBr_2$, e.s.r. of Mn^{2+} 1=14802
$CdBr_2$, effect of Cd ions on nuclear emulsion properties 0=3901
$CdBr_2$ films, crystallization, X-ray study 4=2065
$CdBr_2$, Co^{2+} impurity ion paramagnetic resonance 1=20202
$CdBr_2-KBr-H_2O$, u.s. vel. and adiabatic compressibility 2=17459
$CdBr_2-ZnBr_2-H_2O$ u.s. vel. and adiabatic compressibility 2=17459
CdCa silicate phosphors, Pb + Mn activated 1=6226
$CdCl_2$, in CdS films, effect on elec. cond. of films 4=22708
$CdCl_2$, Co^{2+} impurity ion paramagnetic resonance 1=20202
$CdCl_2$, e.s.r. of Mn^{2+} 1=14802
$CdCl_2$ films, crystallization, X-ray study 4=2065
$CdCl_2$, ionic melt, isotopic migration processes 2=15144
$CdCl_2$, molten, Cd self-diffusion and elec. cond. 2=15574
$CdCl_2$, molten, ionic mobility of Cd 1=15200
$CdCl_2$, molten, u. s. absorption and velocity 0=16696
CdCl, phosphor, sulphide activated 3=950
$CdCl_2$, vapour press., entropy, mol. bending freq. 4=16144
$CdCl_2-KCl$ melts, $(CdCl^4)^{2-}$ ion formation 2=21891
$CdCl_2-KCl-H_2O$, u.s. vel. and adiabatic compressibility 2=17459
$CdCl_2$—NaCl, metastable centres, precipitation 1=12624
$CdCl_2-ZnCl_2-H_2O$, u.s. vel. and adiabatic compressibility 2=17459
$Cd_5Cl(PO_4)_3$:Mn, luminescence 3=13200
$Cd[Co(CO)^4]^2$, Raman spectrum 2=2000
Cd–Cu alloy, crystal growth, temp. meas. 2=21472
Cd–Cu ferrites, mag. moments and Curie points 0=11885
Cd–Cu, thermodynamic props. 0=1956
CdD, u.v. band system 3=2612
CdF_2, conversion from insulator to semiconductor 3=8522
CdF_2, crystal spin–lattice relax. of Yb^{3+}, 2-77°K 3=18138
CdF_2 crystals, e.s.r. of Er^{3+} 2=18944
CdF_2, crystals grown from melt 2=6767
CdF_2, electron-spin resonance of Co^{2+} 0=16164
CdF_2, e.s.r. of Gd^{3+} 2=4256
CdF_2, free-carrier effects 2=14551
CdF_2, growth of highly-perfect single crystals for masers 3=23397
CdF_2, growth, phys. const. and optical props 0=2823
CdF_2, luminescence spectra 1=2455
CdF_2, NaF freezing pt. depression 4=5454
CdF_2, prep. and optical transmission 2=4128
CdF_2, scintillation props. 2=6635
CdF_2 single crystals, pure and rare-earth-doped, growth and opt. spectra 3=3003
CdF_2, spin—lattice relax. of Er^{3+}, 1.6°-25°K 4=30732
CdF_2, Yb^{3+} e.s.r. and spin–lattice relax. 4=26442
CdF_2, Yb^{3+} ion electron paramag. reson., i.r. absorpt. 2=14826, 18948
CdF_2 Eu^{3+}, optical props. study rel. to laser appl. 2=10588
$CdGa_2S_4$, luminescence rel. to chem. structure 4=7178
$CdGeAs_2$, conductivity, thermal, 100-700°K 3=20118
$CdGeAs_2$, preparation and properties 4=1593
$CdGeAs_2$, thermoelec. power, resist., Hall const., thermal cond. and diffusivity 3=8518
CdH, u.v. band system 3=2612
Cd—Hg, hardness rel. to composition 1=14923
$Cd_{0.1}Hg_{0.9}Te$, prep., doping and elec. props. 4=28554
$Cd_{0.9}Hg_{0.1}Te$ thin layers, optical props. 4=13026
$Cd_xHg_{1-x}Te$ alloys, optical and elec. props 3=10938
$Cd_x Hg_{1-x} Te$, elec. and optical props. 2=4034
$Cd_xHg_{1-x}Te$ semiconductors for $x = 1.0, 0.9, 0.8$, optical props. 4=13027
$Cd_xHg_{1-x}Te$ solid solution, absorption and photomagnetic effect spectra rel. to composition 3=17997
(Cd, Hg, Zn)S, electroluminescence 0=16114
CdI, luminescence of activated crystals 2=23595
CdI in non-aqueous solns., u.s. velocity 2=15588
CdI, thermoluminescence, 100°–180°K 2=12636
CdI^- aqueous solns., ultrasonic velocity 0=6790
CdI_2, aerosols, phase changes 3=1402
CdI_2 amine complex, structure, moments 3=15358
CdI_2, bonding and semiconducting relationships 0=15945
CdI_2, crystal structure meas. by neutron diffn., anomalies 4=29098

Cadmium compounds—contd
CdI_2 films, crystalline, absorption spectra 4=2065
CdI_2, fluorescence and phosphorescence 0=13704
CdI_2, ice growth on 0=6335
CdI_2, internal electric-field gradient, calc. 1=11143
CdI_2, nuclear quadrupole resonance, bonding 2=4294
CdI_2, Pb-activated, luminescence 2=18857
CdI_2 and $CdI_2.PbI_2$ absorption spectra 0=10037
CdI_2, photoconductivity and photolysis 0=18066
CdI_2, polytype $28H_c$, atomic structure, growth and screw dislocation theory 4=13584
CdI_2, polytypism, and crystal growth conditions 4=26593
CdI_2, polytypism, rel. to crystal growth 2=10869
CdI_2, thermal decomposition along dislocations 3=17719
CdI_2-KI-H_2O u.s. vel. and adiabatic compressibility 2=17459
CdI_2:$MnCl_2$ and $MnCl_2$:PbI_2 phosphors 0=4436
CdI_2:Pb, fluorescence 0=16078
CdI_2:Pb, luminescent centres, average size, determ. by appl. of Perrin's law 4=17594
$CdIn_2O_4$, crystal structure 0=3237
$CdIn_2S_4$, luminescence rel. to chem. structure 4=7178
$CdIn_2S_4$, photocond., Cu and Au activated 1=3786
$CdIn_2S_4$, photoconductivity 0=7961
$CdIn_2S_4$ photoconductivity and electrical properties 1=10066
$CdIn_2S_4$—$CdTm_2S_4$, electroluminescence due to rare earths 4=13069
$CdIn_2Se_4$, crystal structure and electrical properties 3=25350
$CdIn_2Se_4$, elec. cond., impurity depend. 0=18036
$CdIn_2Se_4$ semiconductor, prep. and props. 3=864
$CdIn_2Se_4$-type, energy-band structure 0=15947
$CdIn_2Te_4$, crystal structure and electrical properties 3=25350
$CdIn_2Te_4$, n-type, elec. props., temp. depend. 4=6949
$CdIn_2Te_4$ semiconductor, prep. and props. 3=864
$CdIn_2Te_4$, transmission, 0.75-2.5 μ meas. 4=7121
Cd—Mg, order—disorder transformation 3=16103
Cd—Mg alloys, phase transformations, and composition 4=20699
Cd—Mg, phase transition kinetics 1=12645
Cd—Mg, short-range order, regularities 1=12643
Cd—Mg, tensile props., —196° -200°C 3=6800
Cd—Mg—In alloys, phase transformations and composition 4=20699
Cd–Mn alloys, elec. resist. min. at 4.5°K 2=6408
$Cd_{0.8}Mn_{2.2}O_4$, antiferromag., < 200°K 4=26345
$Cd_xMn_{3-x}O_4$, ferrimag., $0 \leqslant x \leqslant 0.6$, low temps. 4=26345
$Cd(NO_3)_2.4H_2O$, crystals unit cell and space group, by X-ray diffr. 3=16084
$Cd_2Nb_2O_7$, conduction props. 4=26120
CdNi ferrite, ferromagnetic resonance 1=14775
CdO, action 2-10 kV electrons 0=1162
CdO, conductivity, thermoelec. power 2=18698
CdO containing impurities, lattice parameter and defect structure 1=20535
CdO crystal growth 3=11227
CdO, dipolar absorption studies 1=14535
CdO, disorder and oxygen transport 2=3953
CdO, effect on Bi_2O_3 polymorphism 4=23253
CdO, elec. and optical props. 0=11752
CdO, electron reflection, secondary emission, discrete energy losses 0=9076
CdO films, elec. and optical props. 3=25359
CdO, i.r. optical consts. 2=6553
CdO layers, optical self-absorption, effect of free electrons 0=11758
CdO, magnetothermal effects at high-temp. 2=23066
CdO, optical absorption and dispersion 2=16811
CdO, optical consts, 0.3 to 0.8 μ 4=10165
CdO, prep. of single crystals 2=21482
CdO, semiconductivity and thermoelec. power 2=21150
$CdO-P_2O_5$, phase equilibrium and Mn activated luminescence 4=30796
$5CdO.2P_2O_5$:Mn, luminescence, Cl, Fe effects 4=1762
$Cd(OH)_2$, films, thin, electrocrystallization 3=16170
Cd_3P_2, prep. and semiconducting props. 4=26036
$Cd_4(P,As)_2(Cl,Br,I)_3$, five ternary semiconductors 4=1594
$Cd_2P_2O_7$–Mn, luminescence to 2537A° 2=18858
Cd—Pb, hardness rel. to composition 1=14923
Cd—Pb, irreversible thermally-induced shape changes 1=1440
CdS, absorpt. bands, dispersion shift 2=23565

Cadmium compounds—contd
CdS, absorption coeff., 10-300 cm^{-1}, in polarized light, rel. to exciton creation 0=13679
CdS, absorption edge, press. depend. 0=4408
CdS, absorption edge, pressure effects, to 140 kbars 1=8986
CdS, absorption edge shift, field-induced 4=13024
CdS, absorption edge, temp. depend. 0=10039
CdS, absorpt. by free carriers 2=2159
CdS, absorption, 1-24μ, meas. and theory 4=13025
CdS, absorption spectra at low temp., mechanical working depend. 0=18123
CdS, acoustic amplification, u.s., and phonon Cherenkov rad. 4=15410
CdS acoustic wave amplification, by electron—phonon interaction 3=20092
CdS, acoustic waves coupled to drifting carriers 4=20207
CdS, Ag impurity incorporation 4=6821
CdS, analogue diode and triode 0=2892
CdS, anomalous sound propagation 4=3987
CdS, anti-Debye-type relax. 2=8460
CdS, Au blocking contacts to, at high impressed fields 3=22968
CdS, avalanche electroluminescence from rectifying cell 0=21014
CdS, band structure 1=3619
CdS, band structure, symmetry props. 0=11783
CdS, barrier-free contacts of Al 0=6117
CdS, Becquerel photovoltaic effect 0=9985
CdS, β- and γ-irradiated, induced elec. cond. 0=20933
CdS, blue and green fluorescence at low temp., structure changes, 4.2-77°K 0=16080
CdS, blue luminescence, rel. to excitation wavelength 2=23594
CdS, bound exciton complexes 2=2068
CdS, bound exciton complexes, opt. props. 3=6651
CdS bound excitons 3=10630
CdS breakdown field, structure dependence 0=2355
CdS, cathode-ray stimulated luminescence 1=11403
CdS, cathodoluminescence, field enhancement 4=4294
CdS, cathodoluminescence, polarization 2=23613
CdS, Cd separation by u.v. photolysis 2=4553
CdS, CdS: Cu, photoconductivity, improvement on growing in Ar 4=1679
Cd—CdS liquids, 700°-1250°C 3=19063
CdS and CdSe, photocond. rel. to electric fields 2=6496
CdS. CdSe. photo-Hall effect 2=8408
CdS, change in crystal composition on evaporation 2=596
CdS, chemisorption of O, elec. cond., contact potential obs. 4=29194
CdS, coherent Bragg scattering of neutrons 3=1312
CdS, complex dielectric permeability meas. 0=10010
CdS, concentrated surface film, escape energy 1=15180
CdS, conduction, elec., oscs. 4=26041
CdS, conductivity, effect on current saturation 4=30620
CdS, contact potential, meas. 1=15180
CdS crystal counter, efficiency 4=24944
CdS, crystal counters, counting efficiency 1=1986
CdS crystal counters, irrad. parallel to elec. field 2=18835
CdS crystal counters, negative cond. pulses 2=11833
CdS crystal counters, polarization 0=19974
CdS, crystal dislocation Burgess vector, X-ray diffr. obs. 4=22595
CdS, crystal exciton spectrum, lattice deformation effects 3=22688
CdS crystal excitons, spectra 3=22689
CdS, crystal formation from the powder 0=21165
CdS, crystal growth 3=20791
CdS, crystal growth and defects 1=7574
CdS crystal growth, large 4=7549
CdS, crystal growth, rel. to photo and dark cond. 1=14963
CdS, crystal growth, on silica and quartz 3=16041
CdS, crystal growth and structure 4=29047
CdS, crystal growth from vapour 0=18313
CdS, crystal growth, from vapour in A stream 0=8154
CdS, crystal growth in a vertical furnace 1=10232
CdS, crystal lattice spectrum, specific heat, calc. 4=3975
CdS crystal polarons and cyclotron resonance 4=20258
CdS, crystal stacking faults, wurzite ribbon, X-ray exam. 3=15500
CdS, crystal structure, high-pressure 3=23443
CdS, crystallization 3=18258

Cadmium compounds—contd
CdS crystals, activated and unactivated, luminescence, temp. depend. 0=4438-9
CdS crystals, Becke lines 1=10008
CdS crystals, diffusion of Cu due to dislocations 1=3684
CdS crystals, effect deuteron bombardment 0=1662
CdS crystals, effect of mechanical treatment on absorpt. spectrum 2=6571
CdS crystals, electric breakdown, cine recording methods 3=1845
CdS crystals, with hollow centres, growth 4=29046
CdS, crystals hollow, grown by sublimation at high pressures and temps. 4=7548
CdS crystals, luminescence 0=11776
CdS crystals, luminescence 3=13202
CdS crystals, photovoltaic effect, in contact with Cu 0=9990

- CdS, shallow traps, capture cross-sections, modulated light method 1=1105
- CdS, shallow traps, frequency factor and energy distrib. 0=9991
- CdS single crystal, avalanche breakdown 1=10060
- CdS single crystal, current oscillations induced by light irrad., local 4=28640
- CdS single crystal, structure 1=10254
- CdS single crystals, absorption at band edge 0=1724
- CdS, single crystals, contact potential 2=12526
- CdS single crystals, elect. cond. process 0=1664-6
- CdS single crystals, e.s.r. of Cr^{3+} 4=15669

Cadmium compounds—contd

CdS single crystals, elec. pot. and movement of minority carriers 4=26037
CdS single crystals, electroluminesc. 4=28722
CdS single crystals, fast recomb. at surface 4=26144
CdS, single crystals, fluorescence, polarization 0=11782-3
CdS single crystals, growth from vapour phase 1=10238
CdS, single crystals, introducing additives during growth 3=23395
CdS single crystals, mag. susceptibility 3=4998
CdS single crystals, photoconductivity, effect of infrared 1=7668
CdS single crystals, photoconductivity mechanism 0=13632
CdS single crystals, photoelectric polarization and photomagnetoelectric effects 4=26038
CdS single crystals, precipitation of impurities 4=13479
CdS single crystals, pulse photoconduction, carrier lifetime 1=11322
CdS single crystals, surface states, photoconductivity investigation 4=28421
CdS single crystals, thermally induced conductivity 0=18037
CdS, sintered film, effect of O on photoconduction 1=12458
CdS, sintered layers, photocond. props. 0=2912
CdS, sintered, in photocells and resistors, reversible changes 4=20658
CdS, sintered, in photocond. cells, fabrication 0=2913
CdS, solubility of ZnSe and ZnTe 3=4886
CdS sols., specific heat meas. 0=18443-5
CdS, space-charge-limited current, expt. 3=861
CdS, space charge limited current, noise 3=8520
CdS, space-charge-limited currents 3=25362
CdS, space-charge-limited currents, modulation 3=862
CdS, space-charge limited injection currents 3=2907
CdS, space-charge-limited photocurrents 1=17792
CdS, space charge oscillations 0=6086
CdS, spectra, Raman and i.r. absorpt. 4=17559
CdS, spectrum, reson near absorpt. edge, temp. var., analogue of Mossbauer effect 4=17558
CdS, spectrum at 20°K and 1750 atm. 2=7094
CdS, sphalerite form, elastic moduli 3=18159
CdS, stacking faults 2=18592
CdS, stacking faults 3=808
CdS, stacking faults 3=17769
CdS, stark effect on exciton levels 2=4138, 10597
CdS, stoichiometric defects, effect on photocond. 1=14509
CdS, strong acoustoelectric effect, due to piezoelectric coupling 3=8567
CdS, structure changes 4=13508
CdS, surface conductivity by field-effect 1=17799
CdS, surface photovoltage and surface states 2=21190
CdS, surface studies by electron micr. 3=8924
CdS, Te-doped, electroluminescence 4=28724
CdS, thermally-excited currents, heat treatment effects 1=14463
CdS, thermally stimulated conductivity, rel. to trapping levels 4=1595
CdS, thermally-stimulated elec. cond. 0=11674
CdS, thermally-stimulated elec. cond. rel. to prelim. illumination 4=1596
CdS, thermoluminescence 1=6244
CdS, thermo-stimulated currents in γ-ray irrad. monocryst. 2=2128
CdS, thin-film diodes, space-charge-limited and Schottky-emission currents 4=28595
CdS, thin films, elec. cond., rel. to temp. 3=25363
CdS, transparent In elec. contacts 0=16364
CdS, trap density meas. 2=23154
CdS, trapped space charge, thermal release 3=4949
CdS, trapping and diffusion in surface region 0=13631
CdS, trapping level meas., electrical 3=20326
CdS, trapping levels, fast, meas. from photocond. 3=17846
CdS, trapping-state spectroscopy 3=23101
CdS, traps, distrib. and nature investigation 2=10381
CdS, true photoconductivity 3=17955
CdS, type crystals, i.r. transmission spectra 2=21253
CdS-type semiconds., elec. cond. contact-less study 4=26039
CdS, u.s. attenuation at room temp. 4=20199
CdS, u.s. attenuation, 10-200 Mc/s, photosensitivity 0=11574
CdS, u.s., free carrier trapping effect 4=21236
CdS, u.s. propagation 2=4056

Cadmium compounds—contd

CdS, u.s. wave amplification by d.c. field 2=18784
CdS, u.v. luminescence, photochem. effects 3=3037
CdS, u.v. refl. spectrum, polarization effects 4=4279
CdS, unactivated energy levels and lattice defects 2=10485
CdS, use in u.s. amplifier 4=22488
CdS, valence band structure, quasi-cubic model 1=19983
CdS, vapour-grown, dislocations obs. 2=18585
CdS, X-ray continuous spectrum, Ohlin structure meas. 4=4242
CdS, X-ray diffraction patterns at ultra-high press. 4=15779
CdS, X-ray photoconductivity, spectral distrib. 4=12986
CdS, X-ray spectrum short wave limit 3=4919
CdS, zincblende-type, absorpt. band edge, thermal depend. 4=17557
CdS:Ag, cathodoluminescence, rel. to preparation materials 2=23616
CdS : Ag, photoconductivity 3=20394
CdS; Au and Cu doped photocells; conducting electron origin 2=10542
CdS:Au, fluorescence 0=16096
CdS—CdSe, Ag-activated, photocond. 2=18739
CdS—CdSe, photocond., i.r. quenching, temp. and composition depend. 1=6177
CdS, CdSe, photocond. and luminescence at low temps. 2=8413
CdS-CdSe photoconductors, transient effects 3=2972
CdS—CdSe solutions, edge photoluminescence 1=9004
CdS.CdSe, crystal growth, rel. to photo and dark cond. 1=14963
CdS$_x$ CdSe$_{1-x}$ mixed crystals, spectrum 2=6552, 10596
CdS$_x$CdSe$_{1-x}$, ohmic and nonohmic contacts, photocond. 1=14511
CdS$_x$.CdSe$_{1-x}$, photocond., spectral distrib., absorption, 20° and 77°K 1=1104
CdS—CdTe, preparation, structure and properties 0=621
CdS:Cu, hole conduction and photovoltaic effects 0=4356
CdS—Cu, red electroluminescence 4=7190
CdS:Cu, ultrasonic transducer with diffused layer 3=9566
CdS: Cu, Cl, photoconductivity, i.r., optical activation 4=28639
CdS:Cu, Ga, photosensitive centre, e.s.r. study 3=23224
CdS:Eu (II), e. s. r., crystal field splitting of ^8S state 0=21071
CdS:Fe, spin resonance, photosensitive, at 4.2°K 0=536
CdS:Ga:Cu, photoconductivity, rel. to hole ionization energy of imperfections 0=1663
CdS:I, vapour-grown, after-treatment effects 2=6495
CdS:I:Cu crystals, photoconductivity gain rel. to photon energy 4=12985
CdS:Mn, paramag. resonance at 4.2 and 300°K 0=13872
CdS:Se, photoconductivity, exciton structure obs. 4=7063
CdS:Se, spin-orbit splitting 2=20956
CdS$_x$Se$_{1-x}$ films, photovoltaic effect, (x from 0 to 1) 4=12982
CdS$_x$Se$_{1-x}$, photo-e.m.f., vert. illum., spectrum, var. with x 3=23015
CdS$_x$Se$_{1-x}$ photovoltaic effect, spectral distrib., (x from 0 to 1) 4=12983
Cd(S:Se):Cu, photocond. spectral response 1=14506
CdS:V, 2μ fluorescence, excitation spectra 0=13715
CdS—ZnS, structure and electroluminescence 1=9012
CdS, in ZnS phosphors, effect on luminescence 0=11784
CdS—ZnS, photocond., 3400-5100A 2=6502
CdS$_x$. ZnS$_{1-x}$ mixed crystals, spectrum 2=6552, 10596
CdS—ZnS, Ag and Cu activated, optical props. 0=6161
CdS. ZnS : Cu : Ag, photodielectric properties 1=7686
CdS:ZnS:Mn, α-ray luminescence, effect of elec. fields 1=14656
CdS:ZnS:Mn, luminescence due to α-rays and a.c. field 1=14655
CdS:ZnS:Mn, various effects on luminescence 2=728
CdS. ZnS: Mn, X-ray luminescence, a.c. field enhancement 1=3862-3
CdS—ZnS—NaCl 2%, luminescence emission bands 2=716
CdS—ZnTe heterojunctions, I—V characteristics 1=14483
Cd—Cd*SO$_4$ soln., isotopic exchange reaction with Cd^{115} tracer 2=21589
CdSO$_4$, elec. cond., photocond. and dielec const., effect of CdS inclusion 1=8286
Cd—Sb, growth 1=11543
CdSb, Ag-doped, elec. props. meas. 4=20356
CdSb, anisotropy of chemical bond 3=25649
CdSb, band structure 3=10811

Cadmium compounds—contd
CdSe–Se junctions, effect of X-rays on resistance 2=23469
CdSe:V, 2μ fluorescence, excitation spectra 0=13715
CdSe–ZnSe, photocond., spectral response 0=15996
CdSiO$_3$, luminescence, field-stimulated, absence below 2 × 10^4 V/cm 2=12629
Cd$_2$SiO$_4$, phase transform., high press 4=30797
Cd–Sn alloy density variation under thermal cycling, to 250°C 3=6868
Cd–Sn, thermal cond., effect of melting 2=3856
Cd–Sn, liquid, structure by electron diffraction 0=16691
Cd–Sn, ordering 1=15141
Cd–Sn, thermal cond., effect of melting 1=19730
CdSnAs$_2$, CdSnAs$_2$–InAs solid solutions, magnetothermal and thermoelec. effects 3=17970
CdSnAs$_2$, conduction band, calc. 3=17871
CdSnAs$_2$, conductivity, thermal, 100-700°K 3=20118
CdSnAs$_2$, elec. and optical props. 1=8952
CdSnAs$_2$, as electronic analogue of InAs 2=14548
CdSnAs$_2$, n-type, prep. and semiconducting props. 1=17723
CdSnAs$_2$, n-type semicond, props. 3=4920
CdSnAs$_2$, thermoelec. power, resist., Hall const., thermal cond. and diffusivity 3=8518
CdSnAs$_2$–InAs alloys, elec. props. 3=2915
xCdSnAs$_2$–y(2InAs), elec. props 2=10486
Cd$_2$Ta$_2$O$_7$, use as reactor control material 3=4699
Cd 48–Te 52, L-absorption spectra 1=19999
Cd–Te system, phase equilib. meas. 2=19089
CdTe, absorption edge, pressure effects, to 140 kbars 1=8986
CdTe, acceptor states, shallow and deep 4=4145
CdTe, bonding 0=7833-4
CdTe, Co^{2+} e.s.r., spin Hamiltonian 1=3934
CdTe, cond. band. min. 4=17400
CdTe crystal growth by sublimation 4=7547
CdTe, crystal growth from vapour, differences between opposite faces 4=4542
CdTe, crystal growth from vapour, patterns 3=18259
CdTe, crystal structure, high-pressure 3=23443
CdTe, crystal structure and semiconducting props. 4=1622
CdTe, cyclotron resonance in n-type 4=28432
CdTe, diffusion with HgTe 3=17786
CdTe, diffusion, intercrystalline, 350-580°C 4=1508
CdTe, dislocations, two types 3=10664
CdTe, double acceptor centre, props. 4=17420
CdTe, double acceptor defect 3=17874
CdTe, double-acceptor defect by electron irrad. 3=25268
CdTe, double acceptor luminescence 3=15704
CdTe, e.s.r. of Cr 3=20646
CdTe, e. s. r. of Eu^{2+}, rel. to covalent bonding 4=10321
CdTe, effective electron mass and i.r. props. 3=10812
CdTe, elastic moduli at 25°C, u. s. meas. 2=2313
CdTe, electroelastic props., meas. and model 3=8556
CdTe, electron-spin resonance of Co^{2+} 0=16164
CdTe, etch pits and polarity 2=19044
CdTe, etched, surface layers, elec. props. 4=12889
CdTe evap. films, photovoltaic effect, high voltage 3=2973
CdTe, excess carrier decay times, X-ray pulse study 0=13589
CdTe, excitons and band splitting by uniaxial stress 1=17724
CdTe, excitons, reflection spectrum 3=20441
CdTe, films, charact. electron beam energy losses 1=17492
CdTe films, evap., elec. props. and structure 3=23508
CdTe, films, high-voltage photovoltaic effects 4=1682
CdTe, films, photocond., effect of additives 3=20407
CdTe films, photoelectric e.m.f., "single crystal" 3=17957
CdTe films, photo-e.m.f., structure 2=21188, 23459
CdTe films, photovoltaic effect, at high voltages 0=2312
CdTe films, prep., optical and photoelec. props. 4=22857
CdTe, films, vacuum-deposited, structure 4=26709
CdTe, fluorescent band-edge emission 2=8573
CdTe, growth of single crystals from melt 3=1267
CdTe, growth by static sublimation under pressure 4=157585
CdTe, heat cond., phonon scatt. by mag. impurities 4=9871
CdTe, high-field electron emission 3=421
CdTe, high pressure phase, crystal structure 4=10433
CdTe, high-voltage photovoltaic effect in evap. films 3=2973

CdTe, optical properties 2=680
CdTe, optical refl. and absorpt. props. 3=23067
CdTe, p–n photocells, u.v. quantum yield 0=15987
CdTe, p-type, diffusion of In 3=22806
CdTe in PbTe and SnTe, solid solubilities, phase diagrams, and lattice parameters 4=23262
CdTe, permittivity near band edge, from reflectivity 2=14602
CdTe, phase equilibria and semiconducting properties 0=2893
CdTe, phase transition due to pressure 2=16705
CdTe, phonon scatt. from thermal cond. meas. 4=15411
CdTe photocell conversion of solar radiation to electricity 2=8444
CdTe, photocond., effect of Hg doping 2=16753, 18733
CdTe, photocond. rel. to trapping processes 2=23453
CdTe, photo-e.m.f. 1=6178
CdTe, photoemission rel. to impurities 2=9620
CdTe, polymorphism 1=4006
CdTe, reflection spectra, 20-400μ, 90°-300°K 1=14578
CdTe, reflectivity and band structure 3=17979
CdTe, refractive index 4=13061
CdTe solar cells, description 3=20420
CdTe, solid–vapour equil., ΔH^0 and ΔS^0 3=1877
CdTe, structure changes 4=13508
CdTe, thermal and elec. props. 2=23084
CdTe, thermal expansion 1=4969
CdTe thermal expansion, anomalous negative low-temp. values 3=10603
CdTe, thermal resistance, fall nr. Debye temp. 3=17670
CdTe, u.s. wave velocities 2=9353
CdTe, valence band, l.c.b.o. method 3=779
CdTe, vapour growth of single crystals 2=6769
CdTe, X-ray L-absorpt. spectrum 3=25472
CdTe, X-ray spectrum short wave limit 3=4919
CdTe–CdSe alloys, elec. and thermal props. 4=22706
CdTe–CdSe system, cubic and hexag. structures 4=23424
CdTe–HgSe, photoconductive and photomagnetic effects 4=4225
CdTe–HgTe, film formation and semicond. props. 2=21157
CdTe–HgTe, film formation and semicond. props. 3=2882
CdTe–HgTe, optical and photoelec. props., 0.6-2 μ 4=15593
CdTe–HgTe system, electrical properties 1=14464
CdTe–HgTe system, mag. suscept. meas. 4=13108
CdTe–HgTe system, thermal cond. 2=23084
CdTe–In$_2$Te$_3$ peritectic compounds, semiconducting props. 4=6950
CdTe–In$_2$Te$_3$ pseudo-binary system, phase diagram 4=7478
CdTe:Mn, paramag. resonance at 4.2 and 300°K 0=13872
CdTiO$_3$, dielec. const. meas. 1=19929
CdTiO$_3$, internal electric fields 3=12903
CdTiO$_3$, Ti X-ray spectra, emission, bond type and Kβ_5 line changes 3=23092
Cd–Tl, electronic structure by X-ray diffraction 1=11578
CdU$_2$O$_4$, lattice parameters 1=4054
CdWO$_4$, e.s.r. and spin Hamiltonian of Fe^{3+} 3=5040
CdWO$_4$, growth of single crystals for e. s. r. studies 0=6265
CdWO$_4$, luminescence decay time, ion excitation 0=1756

Cadmium compounds—contd
- $CdWO_4$, luminescence decay rel. to traps 2=6613
- $CdWO_4$, luminescence deterioration rel. to ion bombardment 1=11395
- $CdWO_4$, luminescence induced by α-particles; rel. to temp. 2=2256
- $CdWO_4$, scintillation props. 0=11347
- $CdWO_4$, Mn^{2+} e.s.r. 2=14832
- Cd—Zn alloy density variation under thermal cycling, to 250°C 3=6868
- Cd–Zn, condensation from vapour 2=17697
- Cd—Zn, irreversible thermally-induced shape changes 1=1440
- Cd—Zn, lamellarspacing rel. to freezing velocity 4=8503
- Cd—Zn, thermal vacancies, formation energy, specific resist. 1=11192
- $Cd_{3-x}Zn_xAs_2$, semicond. props. rel. to x 4=26042
- (Cd, Zn)S layers, photoconductivity 3=23016
- (Cd, Zn)S, photoconductivity 1=10061
- Zn–Cd sulphide, temp. depend. luminescence 0=1062
- (Zn, Cd)S : Cu phosphors, crystal structure, atomic, X, γ-ray effects 3=23457

Caesium
- adsorption on W 1=12667
- adsorption on W, electrostatic interaction 1=12668
- air, high-temp. ionization, effect of Cs seeding 2=3005
- allotropic phase transf. due to plastic deformation 0=3170
- arc rectifier 1=11970
- arc, vapour, low voltage, props. 4=29900
- atmosphere, upper, use in electron cloud generation 2=4688
- atom—electron collisions, spin exchange optical pumping study 4=30391
- atomic-beam freq. standards, comparison 1=1725
- atomic beam, reaction with Br_2 mols, crossed 4=28286
- atomic beam scattering on Hg crossed beam 3=2586
- atomic beam, total collision cross-section with 16 molecules 0=4162
- atomic clocks 0=14480
- atomic g_J-factor of Cs^{133} 2=6113
- atomic heat, electronic and thermal contribs., 0.35-2°K meas. 4=25852
- atomic model, for ionization transients 3=24219
- atomic spectral lines, plasma-broadening calc. and meas. of profiles 2=18417
- atomic spectrum, relative doublet line strengths in principal series, calc. 1=13932
- atom, hp. level, ion recomb. calc. 4=15297
- atom charge transfer to $Rb^{85,87}$ ions 4=24563
- atom, collision with slow electrons and Cs^+ 3=4724
- atom, Cs I λ 8521 perturbation by Xe satellite collision bands 4=28120
- atoms, Cs^{133} I, spectrum, $8^2P_{3/2}$ term, h.f.s. and lifetime 3=10451
- atoms, Cs^{133}, spin exchange collisions, e. s. r. meas. 4=25591
- atoms, Cs^{134m}, h.f.s. 2=16477
- atom, elastic scatt. of slow electrons 3=12776
- atom, elastic slow-electron scatt., adiabatic model 3=25064
- atom, elec. charge, upper limit 3=10091
- atoms, electron scatt. cross-sect. meas. by cyclotron resonance 4=25570
- atoms, electron scatt., 6s—6p transition 4=9669
- atoms, excitation of 4555-4594 A doublet by electron impact 2=16487
- atoms, excitation of radiation from 2=18426
- atoms, excited and ground-state, collisions 2=22900
- atoms, i.r. emission 3=12756
- atoms, ionization on collision with H_2, D_2, N_2 and O_2 0=19611
- atoms, optical pumping, microwave emission 0=19918
- atoms, optically pumped, relaxation in buffer gases 4=28142
- atoms, optically pumped, spin relaxation, rel to N_2 pressure 4=6498
- atom, oscillator strength of Cs I line 4=28125
- atom, oscillator strengths calc. 4=25501
- atoms, in plasma, Stark broadening of isolated lines 3=701
- atom, radial wave functions for 26 orbitals 4=28121
- beam frequency resonator, standard 0=12343
- cathodes in plasma diode energy converter 2=19887
- charge exchange, between ions and atoms 1=11915
- corresponding states behaviour 4=24460

Caesium—contd
- de Haas—van Alphen effect, period var. 3=20557
- de Haas-van Alphen effect, in steady mag. fields 4=26263
- desorption from W by elec. fields 3=3361
- diode converter, efficiency analysis 3=3999
- diode, with electron and ion emitters 3=9848
- diode, mag. field effect 3=19166
- diode, radial potential and electron density 4=21575
- discharge column without self-propagating power in mag. field, theory 3=4035
- discharge, elec., cond., field, var. with current 4=21497
- discharge, ion wave resonance and plasma instability 4=11671
- effect on thermionic emission of cathodes 0=10934
- effect on thermionic emission of Mo 2=13584
- elec. cond. 0=15826
- elec. cond., effect of Debye—Waller factor 1=4974
- electrical conductivity, rel. to pressure 4=12854
- electron cloud production by release at high altitude 1=10324
- electron scatt., elastic and inelastic, from electron transport 4=11509
- film, effect on Mo work function 0=9062
- film on W, Mo, Ta, work function variation 2=1474
- film on W, surface potential–surface coverage relation 2=21560
- films, elec. resistance, thermoelec. power 2=6405
- films, elec. resistance, thickness depend. 0=1615
- films, photoelectric photoelectric properties rel. to temp. and thickness 3=15550
- flame resonance lines, optical cross-sections 1=8815
- frequency standard, improved precision 0=6635
- frequency standards 0=855
- fusion curve to 50kb, and polymorphic transitions 2=11544, 17688
- gas, high-temp. compatability with dielectrics 0=2923
- gas, partly ionized, viscosity 4=24562
- h.f.s. study of atomic-beam resonance 1=11082
- heat-elec. power conversion, Cs diode, characteristics 2=209
- ion adsorption energy, linear var. with Mo, W, Ni and Re work functions 4=29196
- ion beams, $Cs^{134,137}$, range in Ge 2=22276
- ion beams, imaging methods 4=27583
- ion "engine" 0=12644
- ion mobilities, pulsed-discharge meas. 4=5562
- ion scatt. process by Mo metal 3=22854
- ionization, in Ar, behind shock wave, relax. 4=21228
- ionization, mobility, scatt., in weak plasma 4=21497
- ionization, by $N + N + Cs \rightarrow N_2 + Cs^+ + e^-$ chem. reaction 2=151
- ionization, surface, on diffusion through W 1=4569
- ions, bombard. metals, secondary electron emission 4=8822
- ions, cathode sputtering ratio for Ni, Ti, Nb, Pt, C, Mo, Re, W, Ta and Fe 4=24753
- ions, Cs^{137}, range in Al 3=12608
- ions, Cs^-, resonance charge exchange, 900-2400 eV 4=18692
- ions, Cs^+ collisionless plasma stream in transverse mag. field 4=24708
- ions, Cs^+, desorption from W, kinetics 2=17073
- ions, Cs^+, scatt. on hot Mo 2=20050
- ions, Cs^+, scattering on hot Mo 3=2047
- ions, range in Al 0=19804
- ions, secondary emission, by Cs^+ bombardment of Mo 4=5717
- ions, thermionic emission, mass spectrometer study 0=276
- liquid, heat capacity calc. up to 800°C 3=23870
- liquid layer, as proposed field emission mixer 2=3159
- manipulation of ampoules 0=8458
- NH_4 soln., e.s.r., effect of adding CsI 3=11811
- n. m. r., electronic structure 0=4530
- optical pumping, coherent light amplification 2=6101
- optical pumping light source 3=16761
- optically pumped, spin relax. rel. to buffer gas pressure 4=25537
- oscillator strengths, calc. 2=18416
- photocathodes, Cs—Sb, fatigue at high light level 1=13118
- photoconductivity in graphite—Cs cell 2=12456
- photoelectric emission, work function, pure Cs in u.h.v. 4=11697
- plasma, appls. and props. 4=8670

Caesium—contd

plasma, conductivity, electrical, effect of electrode film barriers 3=21820
plasma, cylindrical, in mag. field, instability, harmonics detection 4=14722
plasma, diffusion across mag. field 1=4600
plasma diode for direct conversion of elec. operational results 4=29864
plasma diodes, fission energy heated 4=27464
plasma, disintegrating, volume recombination 3=24278
plasma, electron mobility, scatt. cross-sections 3=12186
plasma, electron–neutral atom elastic scatt. theory 2=19991
plasma, generation in mag. field 1=8324
plasma, high-freq. resonance probe meas. 4=18932
plasma, highly ionized quiescent, generation and application 2=5354
plasma, ion acoustic waves, Landau damping meas. 4=8752
plasma, ion acoustic waves, Landau—viscous damping transition 4=19024
plasma, low-temp., highly ionized, generating device 1=2981
plasma, probe characteristics meas. by 1-, 2-, 3-, and 4-electrode probes 4=14688
plasma, quiescent, steady-state generation 3=4107
plasma, recomb., electron—ion, higher densities 3=21821
plasma seeded with Cs, elec. conductivity calc. 1=16309
plasma, temp. and density meas., spectroscopic 2=1447
plasma, 10^{10}-10^{11} cm^{-3}, low-freq. wave excitation in curved mag. fld. 4=11660
plasma thermionic converters 4=27461
in plasma thermocouple, for 1600°-2600°K hot-junction 0=1139
plasma, use in expts., survey 4=18790
positron mean life 0=9342
resistivity of liquid 1=15900
resonance fluorescence of vapour, h.f.s. 1=4469
resonance spectrum, effect of A at press. up to 1500 atm. 0=5882
satellite bands in gaseous mixture spectra 4=25594
sorption by activated charcoal 2=6857
specific heat and Debye temp. 2=16608
spectra of gaseous mixtures, satellite bands 4=25781
spectrum, absorption, in hydrocarbon vapours 3=22478
spectrum, CsI, interferometric meas. 2=8063
spectrum, P$_{1/2}$ doublet quenching in gas mixtures 4=9674
stress/strain at 1.4—77°K 1=12594
thermodynamic props., liquid and vapour, up to 1500°K and 22 bars, calc. 4=8246
thermoelectric power, pressure dependence 2=6507
thermoelectricity, electron and phonon scatt. 3=23027
thermoelectricity meas. below 1°K 0=18076
thermionic converters, characteristics 1=4641
thermionic converters, plasma oscillations 1=11968
time standard, rel. to earth's rotation period and quartz oscillator freq. 0=10547
use for artificial electron cloud formation by thermal ionization 1=6611
use for artificial electron cloud formation by thermal ionization 1=6612
transition probabilities for optical pumping 1=11074
vacuum deposition 3=11844
vaporization, high temps., coprecipitated with K$_4$Ni$_4$[Fe(CN)$_6$]$_3$, inhibiting agents 4=5470
vapour atmosphere, effect on pyrometric meas. 4=5429
vapour, contact ionization process 2=3010
vapour devices, use of AgCl seals 4=27236
vapour, diffusion in Mo, rel. to surface ionization 2=11623
vapour diode, thermionic emission 3=14628
vapour, discharge voltage 4=8653
vapour dispenser 4=21544
vapour, effect on electron emission of Ge 0=7139
vapour, elec. cond. meas., temp. depend. 3=23939
vapour, ionization, absolute cross-section 4=14573
vapour, ionization in shock tubes 3=1930
vapour, lamps, for optical communication 2=7347
vapour, low voltage arc, props. 4=29900
vapour, optically driven spin precession 1=8821
vapour pressure measurement 3=19076
vapour, supplementing thermoelectric energy converter 2=7555
vapour in thermionic converter, low-freq. oscillations, expt. 4=11504

Caesium — contd

vapour, use in thermionic energy converter 1=16372
weakly ionized, Onsager phenomenological coeffs., calc. 4=5593
Cs-filled thermionic convertor, current—voltage characteristics, rel. to current oscillations 4=14564
Cs-filled thermionic tube, thermoelectric power 1=18474
Cs—Ge layers, secondary electron emission 2=7651
He—Cs discharges, nonthermal ionization 1=11920
Cs—He discharges, nonthermal ionization 2=11615
Cs—He transient discharge, ionization 3=9727
Cs—Hg diode, Hg addition effect 4=29976
Cs—Hg system, intermolecular potential well 2=18497
Cs—N atomic system, excitation transfer and maser use 2=22901
Cs on W, surface ionization 2=19904
Cs^{133} atomic spectrum, h.f.s. Stark shift 2=3694
Cs^{133}, e.s.r., vapour, optically aligned, fine structure 4=6471
Cs^{133} l.f. resonance lines 0=17705
Cs^{133} mag. dipole transitions, g$_J$ factors from e.s.r. 1=9914
Cs^{134}, det. of traces in Na, K salts 3=11368
Cs^{136} yield from neutron fusion of U^{233} 2=3635
Cs^{137} fallout in precip. and ground-level air in Sweden 2=17149
Cs^{137} level in biosphere, Toronto 1961-2 3=23604
Cs^{137}, as monoenergetic γ-ray source 2=5611
Cs^{137} in oceans, vertical distrib. 4=2183
Cs$^+$, backscattering from W, Ta, Mo, Ti and Ni targets rel. to temp. 4=8854
Cs$^+$ bombard. Mo and Ni targets, ang. distrib. of scattered secondary ions 4=8856
Cs$^+$ bombarding Mo, non-stationary processes 2=1524
Cs$^+$—Cs atom charge transfer, 50-4000 eV meas. 3=5629
Cs$^+$, desorption from Re 3=8930
Cs$^+$ ions, sputtering of and scattering by Ta and Mo 0=9107

Caesium compounds

extraction from reactor fission products 0=4719
Cs antimonides, Cs partial pressure, 25-180°C 1=10627
Cs borates, crystalline and vitreous, cation distrib. 0=4645
Cs cyanoplatinate, as γ-scintillator 3=6668
Cs halides, cond. band structure 4=6787
halides, diffusion of Xe, prod. by n irrad. 3=15508
halides, entropies, ht. of sublimation and dissociation energies 2=7463
Cs halides, F-centre spectrum, rel. to crystal structure 3=20242
halides, ionic motion, mechanism 2=3931
halides, polymorphism 1=6516
Cs oxide cathodes, i.r. irrad., fatigue effects 3=2018
Cs perrhenate in CsNO$_3$, heats of soln. and dil., interaction parameters of liq.—liq. mixtures 4=10631
Cs uranyl nitrate, crystal struct. 2=4423
di-caesium uranyl nitrate, fluorescence spectrum at 77°K 4=17595
CsAu, electronic band struct. 2=14405
CsAu, photoemission and band struct. 2=5373
CsAu, resistivity, Hall const., Seebeck coeff. 3=20328
CsBeF$_3$, crystal structure, atomic 3=20847
Cs—Bi structure 1=15142
CsBi$_2$ structure from electrical meas. 1=15142
Cs$_3$Bi crystal structure, comparison with CsBi$_2$ 0=14011
Cs$_3$Bi photocathodes, with adsorbed BaO, work functions 1=13111
Cs$_3$Bi structure from electrical meas. 1=15142
Cs$_3$Bi(Ag), Cs$_3$Bi, Cs$_3$Sb, pair-prod. by low-energy electrons 2=8357
CsBr, colloid absorpt. band at 1050 mμ 3=25451
CsBr, colour, centre F, mag. dichroism 4=25971
CsBr, colour centres 2=21080
CsBr, colour centres, absorption 0.175-3.5 μ 1=992
CsBr, containing colour centres, photoconduct. 4=4231
CsBr crystals, electron-coupled nuclear spin interactions 1=14817
CsBr, diffusion and ionic conductivity, 300-550°C 0=9917
CsBr, elastic const., room temp. to 4.2° K 4=15702
CsBr, elastic constants, temp. depend. 4=1932
CsBr, elastic consts., 4.2-300°K 1=1294
CsBr, elastic consts., 73-300°K, from u.s. velocity 1=12583
CsBr, electron energy loss spectra 2=3889
CsBr, equation of state, Grüneisen approx., temp. var., calc. 3=20115

Caesium compounds—contd
CsBr, with excess Br, optical absorption 1=8990
CsBr, F-band struct., at liq. He temp. 2=23217
CsBr, F-band structure 0=7894
CsBr, F-centre optical props., mag. field effects 4=28499
CsBr moving edge dislocations 3=10654
CsBr, n.m.r. of Br^{79,81} 3=14185
CsBr, optical dispersion, meas. in i.r. eigen-vibration region 1=17866
CsBr, photoelectron energy distrib., valence band structure 0=17029
CsBr, Raman scatt. meas. 3=15692
CsBr, reflectivity, reststrahlen bands 2=2218
CsBr, solid, transport number, 350-450°C 0=9948
CsBr, thermal expansion, by X-ray diffr. 1=14185
CsBr, thermoluminescence, X-ray, u. v. excited 4=30697
CsBr, twinning, mechanism 0=12001
CsBr:Tl, charged-particle luminesc. 2=2257
CsBr(Tl), luminescent decay 1=9009
CsBr:Tl, luminesc. spectra 2=4171
CsBr$_3$ samples, preparation technique 4=23993
Cs$_2$CdCl$_4$, crystal struct., atomic 4=23425
CsCl, allotropic transformation 0=3171
CsCl, bonds broken at atomically flat surface 2=14932
CsCl, Cl diffusion and elec. cond. 2=12449
CsCl, colour centre energy levels, rel. to absorpt. spectra 2=23212
CsCl, colour centre, F, mag. dichroism 4=25971
CsCl, colour centres, absorption 0.175-3.5 μ 1=992
CsCl, crystal growth from solution and melt 0=18306
CsCl crystal lattice spectrum, effect on specific heat, acoustic velo. 4=3974
CsCl crystals, Debye Θ and compressibility 1=9980
CsCl crystals, thermal expansion 1=918
CsCl, decomposition by electron irrad. 3=17809
CsCl, electron-irrad., e.s.r. of unidentified centre 2=4253
CsCl, exoelectron emission spectrum 3=14618
CsCl, F-band shape under 6200 atm 4=20313
CsCl, F-band struct., at liq. He temp. 2=23217
CsCl, h.p. polymorphs, lattice energies and parameters 4=15786
CsCl, K-absorpt. spectrum of Cl 3=6660
CsCl, Madelung constant 0=13475
CsCl, on metal films, elec. cond. effects 2=621
CsCl, metallic transition, pressure required, calc. 0=15802
CsCl, molecular-beam collision cross-sections with gases, dipole-dipole force effects 0=15795
CsCl, molecules, ionization in adsorbed state 1=3019
CsCl, molten, self-diffusion 2=15573
CsCl, phase transition at 469°C, X-ray investigation 4=23257
CsCl, photoelectron energy distrib., valence band structure 0=17029
CsCl, polycryst. rods, thermal expansion up to 600°C 4=12654
CsCl, re-orientation rel. to undirectional abrasion 2=19034
CsCl, secondary emission, by K ions 3=16978
CsCl, single crystals, elec. cond. 4=30603
CsCl, surface ionization on W 0=10873
CsCl, texture after compression 2=14928
CsCl-type crystals, elastic and thermoelastic constants 1=20293
CsCl type crystals, independent slip systems 4=1934
CsCl type crystals, lattice 3=20079
CsCl-type crystals, third-order elastic constants 4=1933
CsCl-type lattices, phonon spectra, thermodynam. props. 4=1382
CsCl type solid solutions, heat of formation 3=18230
CsCl, use in transmitting high press. 0=3387
CsCl vapour, electron diffraction 0=17854
CsCl whiskers on aqueous films, capillary rise 0=1887
CsCl–RbCl, CsCl–NaCl systems, solid solubility, from Debye–Scherrer photograms 4=28996
CsClO$_3$, Cs nuclear quadrupole coupling interactions 0=9226
CsClO$_4$, X-ray K-absorpt. spectra of Cl 3=20498
Cs$_3$CoCl$_5$, crystal structure, least-squares refinement 4=23426
Cs$_2$Co(SO$_4$)$_2$·6H$_2$O, crystal struct., atomic 4=23435
Cs–Cr alum, Cr e.s. relax., saturation effects 2=10697

Caesium compounds—contd
CsF, absorption spectrum, after X-irradiation, 295, 80, 18°K 3=15676
CsF atmosphere in thermionic convertor, rel. to W electron emission 4=18662
CsF, effect on thermionic emission of Mo 2=13584
CsF, enthalpy of soln. in water 4=29623
CsF, F colour band peak energy calc. 4=30586
CsF, i.r. lattice refl. spectrum analysis 4=1737
CsF, lattice vibrations and specific heat, calc. 0=13480
CsF, luminescence spectra 1=2455
CsI, adsorpt. of HCN, bonding 4=29198
CsI, α-particle scintillations 2=18878
CsI breakdown strength 1=17853
CsI, colour centres, absorption 0.175-3.5 μ 1=992
CsI crystals, kinking limit rel. to stress and temp. 2=6723

$CaCO_3$, e.s.r. of Mn^{2+}, pressure depend. to 7000 atm. 4=1880
$CaCO_3$, elastic consts. meas. 2=21390
$CaCO_3$, elastic consts, from velo., u.s. 3=23278
$CaCO_3$, elastic twinning kinetics 3=3260
$CaCO_3$, high-press. phases, X-ray diffr. study 4=30799
$CaCO_3$, high-press. X-ray diffr. study 2=8811
$CaCO_3$ (Iceland spar), photoelec. emission after crushing and coloration 3=14634
$CaCO_3$(Iceland spar), Raman band intensities in Stokes region, temp. depend. 1=5052
$CaCO_3$, lattice freqs. rotational barriers 2=16835
$CaCO_3$ layers on CaF_2, i. r. absorption 0=10040
$CaCO_3$ neutron spectrometer crystal 0=5572
$CaCO_3$, optical harmonic generation with ruby laser 2=14666
$CaCO_3$, phosphorescence decay law 1=7724
$CaCO_3$, Raman spectrum, laser stimulated, 2 Stokes and 4 anti-Stokes orders 4=20451

Calcium compounds—contd
$CaCO_3$, Raman spectrum, Stokes and anti-Stokes lines, laser stimulated 4=7105
$CaCO_3$, specific heat, 1.6° to 70°K, rel. to antiferromag. transition 3=17659
$CaCO_3$, twin lamella, dislocs. 3=12982
$CaCO_3$, twinning dislocation movement 2=4364, 8769
$CaCO_3$, u.s. internal conical refraction 3=21500
$CaCO_3$, X-irradiation, effect on props. 2=4085
$CaCO_3$, H_2O, prep., crystallography, refractive index 0=1907
$CaC_2O_4.H_2O$, lattice consts. and refractive indices 0=6169
CaCd silicate phosphors, Pb +Mn activated 1=6226
$CaCl_2$ aq. soln., proton relax., rel. to concentration 4=27199
$CaCl_2$, aq. solns., with $CaCO_3$, 350-500°C, 100-1800 atm 1=15863
$CaCl_2$, aq., Soret effect at 25°C 2=7200
$CaCl_2$, conc. soln., resistance meas. 2=11385
$CaCl_2$,drop growth in humid air stream 1=11746
$CaCl_2$, heat of sublimation 4=5475
$CaCl_2$ impurities in KCl crystals rel. to vacancies 1=12373
$CaCl_2$, ionic melt, electromigration 790°-1060°C 2=15144
$CaCl_2$, vapour pressure and thermodynamics of vaporization, 1110° to 1281°K 4=5461
$CaCl_2$–NaCl mixed crystals, Ca ion diffusion 0=6062
$CaD_2:Eu^{3+}$ crystals, oriented deformation, luminesc. spectrum 2=712
CaF_2, absorption, light, additively coloured, i.r. 3=20470
CaF_2, adsorption of water vapour 3=1381
CaF_2, additive colour centres 4=4081
CaF_2, Ar-diffusion as model for fission gas transport in UO_2 4=25466
CaF_2, capture levels and recomb. nature of thermoluminesc. 4=28728
CaF_2, cation impurities of Na and rare earths 2=10417
CaF_2, Christiansen filter for flow studies 0=3494
CaF_2, closed-shell ion-ion interactions 1=19710
CaF_2, closed-shell ion—ion interactions 2=16588
CaF_2, Co^{2+} e.s.r., spin Hamiltonian 1=3934
CaF_2, cohesive and surface energies calc. 2=6245
CaF_2, colour centre energy levels, rel. to absorpt. spectra 2=23212
CaF_2, colouration spectra 3=2837
CaF_2, coloured crystals, luminescence 0=6192
CaF_2 coloured monocrystals, prep. and props. 1=14329
CaF_2, crystal growth, Czochralski method 1=14990
CaF_2, crystal internal charge compensation by interstitial F^-, e.s.r. obs. 4=22460
CaF_2, crystal preparation by zone melting 1=10239
CaF_2 crystals, thermal expansion 1=918
CaF_2, crystals, transparency 2=6555
CaF_2, damage by sliding and wear 3=11189
CaF_2, decomposition, electron irrad. in microscope 3=21004
CaF_2, detection of hydrolysis in solid by e.s.r. 1=11478
CaF_2, diffusion of A^{41} 2=18596
CaF_2, diffusion by O_2, meas. 4=12786
CaF_2, dissociation energy meas. 3=21638
CaF_2, doped, luminesc. 2=4111
CaF_2, doped, microwave u.s. spin—phonon interactions 3=23242
CaF_2 doped with 1% Dy^{3+}, fluorescence excitation by two-photon absorpt. 4=17599
CaF_2 doped with Sm^{2+} ions, fluorescence and absorption spectra 4=17582
CaF_2, Dy^{2+} paramagnetic resonance spectra, study at liq. He temp. 4=28871
CaF_2, Dy^{3+} doped, $Dy^{3+} \rightarrow Dy^{2+}$ photo-reduction by γ-rays and thermal reoxidation 4=23679
CaF_2, Dy^{3+} e.s.r. in cubic and axial fields 4=1873
CaF_2, Dy^{3+} e.s.r. in cubic crystal field 1=3933
CaF_2, e.s.r. of Dy^{3+}, separation of Γ_8-Γ_7 levels 4=20590
CaF_2, e. s. r. of Er^{3+}, five spectra 4=4403
CaF_2, e.s.r. of Gd^{3+} 3=15943
CaF_2, e.s.r. of Gd^{3+}, meas. analysis 4=4407
CaF_2, e.s.r. of Ho^{2+} meas. 3=13301
CaF_2, e. s. r. of impurities 0=11937
CaF_2, e. s. r. and optical spectra of Yb^{3+} in 0=11938
CaF_2, e.s.r. point defects, charge compensation investigation 2=4249
CaF_2, e.s.r. of rare earth ions 3=3172
CaF_2, e.s.r. of Sm^{3+}, tetragonal, g factors 4=20590
CaF_2, e. s. r. spectra of impurities, theory of satellite lines 0=8088

Calcium compounds—contd

CaF$_2$,e.s.r.of Tm^{2+},Ho^{2+} 4=26433
CaF$_2$, e.s.r. of trivalent rare-earth ions, crystal-field splittings 4=20585
CaF$_2$, e.s.r. of U^{3+}, orthorhombic spectrum 3=20658
CaF$_2$, e.s.r. of U^{4+}, charge compensation 3=3180
CaF$_2$, e. s. r. of Y, after 2 MeV β irrad. 4=10167
CaF$_2$, elastic and thermoelastic props. 3=18161
CaF$_2$, elec. charge due to proton bombard. 2=15967
CaF$_2$, elec. cond., 150-650°C 0=11654
CaF$_2$, electron-spin resonance of Co^{2+} 0=16164
CaF$_2$, energy levels of Tm^{2+} in 2=18833
CaF$_2$, Er^{2+} and Yb^{2+} absorption and luminescence spectra 3=3000
CaF$_2$, etching of cleavage faces 2=10786
CaF$_2$, Eu-doped, e.s.r. absorption of 9·3 kMc/s phonons 3=1190
CaF$_2$, Eu^{2+} e.s.r. and n.m.r. 2=10715
CaF$_2$,Eu^{2+} electron–nuclear double resonance 4=26449
CaF$_2$, Eu^{2+}, Sm^{3+} impurities, electron phototransfer 3=951
CaF$_2$, evap. film, refractive index determ. 2=682
CaF$_2$, F^{19} n.m.r., analysis by lattice harmonics 3=5047
CaF$_2$, F^{19} n.m.r. in r.f. field 3=3188
CaF$_2$, Faraday rotation by Er^{2+}, Er^{3+}, Gd^{3+} and Nd^{+} 4=7103
CaF$_2$, films, growth, surface mobility and gas occlusion from optical props. 4=2120
CaF$_2$, films, structure from optical consts., adsorption formation theory 3=13560
CaF$_2$ (fluorite), crushed, coarse powder specimens, texture 4=10573
CaF$_2$ (fluorite), dislocations, electron microscope study 1=8910
CaF$_2$ (fluorite), photoelec. emission after crushing and coloration 3=14634
CaF$_2$(fluorite), Raman band intensities in Stokes region, temp. depend. 1=5052
CaF$_2$, fluorite, solubility in aq. electrolytes 3=23874
CaF$_2$, fused bath, electronic & ionic conductance, 1100°C 3=1394
CaF$_2$, Gd^{3+} e.s.r. 4=7327
CaF$_2$, geometry and bonding, from deflection in elec. field 4=22378
CaF$_2$, growth of highly-perfect single crystals for masers 3=23397
CaF$_2$, H atom e.s.r. 2=21364
CaF$_2$,H interstitial atoms,e.s.r. 4=26402
CaF$_2$, hardness rosettes and impression shapes 3=16009
CaF$_2$, high-purity crystals, coloration 3=6541
CaF$_2$, i. r. absorption 0=10040
CaF$_2$, i.r. reflectivity and transmission 2=21236
CaF$_2$, with impurities, e. s. r. 0=6267
CaF$_2$ with impurity valence changes, e.s.r. 3=1180
CaF$_2$, lattice const. and density, precision 1=1677-8
CaF$_2$, lattice dynamics, thermal expansion 2=3819, 3820
CaF$_2$, lattice thermal cond. 2=16616
CaF$_2$, lattice vibrations, optical freqs. 2=20922
CaF$_2$, light scattering coeff. of Kubelka–Munk theory 4=17556
CaF$_2$, liquid state structure 0=19114
CaF$_2$, longitudinal spin—spin relax. of F 4=13335
CaF$_2$, luminesc., doped and undoped 2=2264
CaF$_2$, luminescence spectra 1=2455
CaF$_2$, n.m.r. of F 2=14849
CaF$_2$, n. m. r. narrowing by rot. r. f. field 4=4420
CaF$_2$, n.m.r. saturation 1=7801
CaF$_2$, Nd^{3+} and U^{3+} paramag. resonance at 20°K 1=9055
CaF$_2$, optical absorption, refractive index, i. r. 4=7122
CaF$_2$ optical constants in i.r. 1=19944
CaF$_2$, optical and luminescent props. 0=11759
CaF$_2$, optical pumping of Eu^{2+} 0=1829
CaF$_2$, paramag. relax. of Gd^{3+}, meas. 4=7328
CaF$_2$, photoconductivity, in electric fields 3=20406
CaF$_2$, photoelectron yield from soft X-rays 1=2990
CaF$_2$, "piezospectroscopic" effect in optical spectra 2=23559
CaF$_2$, precipitated, thermoluminescence, X-ray effects 0=6210
CaF$_2$, pressure induced colour centres 1=4995
CaF$_2$, pure, annealed in O$_2$ and air, optical absorption 4=12787
CaF$_2$, pure and doped, coloration by 2.5 MeV electrons at 20 and –190°C 0=20836-7

Calcium compounds—contd

CaO cathodes, photoluminescence 4=17601
CaO, cathodoluminescence, vacuum u.v. 3=13178
CaO, covalent bonding, evidence from e.s.r. data 3=25576
CaO, with divalent Fe impurity, e. s. r. 4=17678
CaO, e. s. r. of Eu^{2+}, exchange interactions 4=13315
CaO, e.s.r. of iron group and rare earth impurities 4=26405
CaO, e.s.r. of six metal ions 3=3181
CaO, elastic moduli, calc. from lattice vibration theory 1=2370
CaO, elec. cond. in strong elec. fields 2=2127
CaO, elec. cond. and thermoelec. power 1=17725
CaO, exoemission, luminescence 3=419
CaO, Fe^{3+} and Mn^{2+} e.s.r. 2=21362
CaO films, optical absorption, elec. cond., thermoelec. power 3=20471
CaO, 14. 5 μ-200 mμ absorption meas. 4=7120
CaO, Franck–Condon factors of band system 4=25660
CaO; Gd^{3+} and Eu^{2+} e.s.r., 290°, 77°, 4. 2°K 2=21363
CaO, heat of sublimation 3=19075
CaO, heat of vaporization, by mass spectr. 3=1875
CaO, incandescence in flame, rel. to catalysis 2=7452
CaO, mixtures with ZrO_2 and MgO, phase change temps. 4=23296
CaO, nature of elec. cond. at high temps. 2=18643, 21107
CaO, Ni^+ and Cu^{2+} e.s.r., Jahn—Teller effect 4=13327
CaO, optical and e.s.r. spectra after neutron irrad. 3=13169
CaO, oxygen treated, luminescence, electron excitation 3=15717
CaO, paramagnetic, defect centres due to X or Hg irrad. 4=7320
CaO, thermoelec. power and elec. cond. 4=22705
CaO, transition electronic moment rel. to internuclear distance 2=6192
CaO, X-ray characteristic temp. and thermal expansion 4=28372
$CaO-Al_2O_3$ mixture, heat of fusion 3=293
$CaO-Al_2O_3-Fe_2O_3$, phase structures 4=26643
$2CaO.Al_2O_3.SiO_2$:Ce, luminesc. rel. to Fe, Cu, Cr content 2=23612
$CaO-B_2O_3$ mixture, heat of fusion 3=293
$CaO-B_2O_3-Al_2O_3$, dielectric props. rel. to struct. 2=658
$CaO-B_2O_3-Al_2O_3$ glasses, structure and d.c. conductivity 1=14397
$CaO.B_2O_3$:Pb, luminescence, u.v. and visible 4=17596
$CaO.xB_2O_3$:Pb, Mn, luminescence, var. composition 4=17597
CaO–BaO glass, elec. resist. rel. to composition 2=21110
2CaO. 3BeO, crystal struct. 2=17020
$CaO.6Fe_2O_3.La_2O_3$, ferrimagnetism 4=10289
$CaO-GeO_2$, viscosity, 1000-1550°C 0=8255
$CaO-HfO_2$, elec. conductivity from 800° to 2000°C 4=10093
3CaO, MgO, $2SiO_2-MgO.Al_2O_3-2CaO$, Al_2O_3 SiO_2, in phase equilibrium in $CaO-SiO_2-Al_2O_3-MgO$ 4=29005
CaO: Mn, Li phosphors, H_2 or N_2 -fired 3=3039
CaO: Sm, luminesc., impurity effects 4=28729
$xCaO.yTiO_2$ (Pb) luminesc. rel. to comp. 2=8564
$CaO-Y_2O_3-ZrO_2$, solid solution ionic conductivity 4=20405
$CaO-ZrO_2$, elec. conductivity from 800° to 2000°C 4=10093
$CaO-ZrO_2$ solid solution, electrical conductivity, ionic 3=8550
$Ca(OH)_2$, lattice energy levels by neutron scatt. 3=17643
$Ca(OH)_2$, lattice vibs. 4=3973
$Ca(OH)_2$, Raman and i.r. spectra 1=1171
β-$Ca_2P_2O_7$ crystals, growth by hydrothermal synthesis 3=6827
$Ca_3(PO_4)_2$, Cu activated 0=4441
β-$Ca_3(PO_4)_2$, low-temp. phase transitions 0=8011

Calcium compounds—contd

- $Ca_3(PO_4)_2$, luminesc., field-stimulated, absence below 2×10^5 V/cm 2=12629
- $3[Ca(PO_4)_2]$. CaF_2, Mn^{2+} e.s.r. 2=14831
- $3Ca_3(PO_4)_2.Ca(FCl)_2$, Sb- and Mn-activated, fluorescence 1=14628
- $Ca_5(PO_4)_3Cl$, colour centres, optical meas. 4=22626
- $Ca_5(PO_4)_3(Cl,F)$:Sb, Mn, luminesc. 3=10991
- $Ca_5(PO_4)_3F$, colour centres, optical meas. 4=22626
- β-$Ca_3(PO_4)_2$:Tl, u.v. luminesc. 2=18860
- $CaPd(CN)_4.5H_2O$ 4=29101
- $CaPd_3O_4$, crystal struct., poss. space groups 4=26645
- $CaPt(CN)_4.5H_2O$, crystal structure 4=29101
- CaPt[P, Ni] $(CN)_4.5H_2O$ diamagnetic anisotropy 4=26265
- CaS-based phosphors, luminescence flash, thermal activation energy 0=16077
- CaS, dielec. props. at 7.25 Mc/s 3=17932
- CaS, dissociation energy $D_0 = 79{\cdot}5$ kcal/mole 3=25806
- CaS, Mn activator incorporation 3=12965
- CaS , Ni-activated luminesc. 2=4170
- CaS phosphors, trapping-level investigation by exoelectronic emission 2=16846
- CaS, thermodynamic props. rel. to vaporization 4=16301
- CaS, trapping levels by thermoluminescence and exo-emission 2=16877
- CaS, X-ray characteristic temp. and thermal expansion 4=28372
- CaS–Bi optical quenching, thermal activation energy 2=16855
- CaS:Cu, Eu, electroluminescence 0=11791
- CaS:Ni, fluorescence 0=6193
- $CaSO_4$ (anhydrite), thermoluminescence 1=20035
- $CaSO_4$, crystal structure 3=23453
- $CaSO_4$, phosphorescence decay law 1=7724
- $CaSO_4$, plasters, skeleton strength and critical porosity 0=13916
- $CaSO_4$, Sm-activated, thermoluminescence 1=16621
- $CaSO_4$, thermoluminescence 2=16876
- $CaSO_4$, thermoluminescence rel. to exo-electron emission 3=2013
- $CaSO_4.\frac{1}{2}H_2O$, crystal growth during hydration 4=20727
- $CaSO_4.\frac{1}{2}H_2O$,γ irrad.,e.s.r.of atomic H 4=26401
- $CaSO_4.2H_2O$, dielectric anisotropy, 3cm 4=1649
- $CaSO_4.2H_2O$, dielectric const., 8 mm, by shorted-line waveguide 3=22973
- $CaSO_4.2H_2O$, monoclinic, vibration spectrum 3=23038
- $CaSO_4.2H_2O$, nuclear magnetic relax. 2=16934
- $CaSO_4.2H_2O$, n.m.r. 3=8728
- $CaSO_4.2H_2O$, nucleation, effect of var. subst. 4=20730
- $CaSO_42H_2O$, proton magnetic resonance 1=14822
- $CaSO_4.2H_2O$, vibr. spectrum, resonance splitting 4=3983
- $CaSO_4$, Mn, exo-electron emission 0=2383
- $CaSO_4$:Mn, thermoluminescence 2=23623
- $CaSO_4$, S X-ray spectrum, K absorpt., Stark effect and excitons 3=23097
- $CaSO_4$: Sm, thermoluminescence 4=28730
- $CaSO_4$–Sm thermoluminescence rel. to exo-electron emission 3=2013
- $Ca_{1+x+y/2}Sb_2O_6(O_X + F_Y)$, X-ray study 4=4603
- $Ca_2Sb_2O_6F$, and with Nb, Ta subs. for Sb, luminescence 4=26237
- $CaSe_2O_5$, i.r. absorption and Raman spectra 0=11526
- CaSi, crystal structure, rel. to similar types 3=18338
- $CaSiO_3$, luminesc. on bombard. with Li ions 2=724
- $CaSiO_3$:Mn, Pb, preparation and phase relationships 0=3267
- Ca_2SiO_4, β-phase, crystal structure 4=23431
- α^1-Ca_2SiO_4:Sn, yellow-emitting 0=4443
- β-Ca_2SiO_4:Sn, blue-emitting, broad excitation band 0=4443
- Ca_3SiO_5 phase structure, room temp. to 1100°C 4=29100
- CaSn, crystal structure, rel. to similar types 3=18338
- $CaSnO_3$, γ-reson. absorption, lattice structure, 78-1020°K 4=1350
- $CaSnO_3$, puckering phase transitions 0=13654
- (Ca–Sr) orthophosphate, Tl activated, u.v. emission 2=12618
- $Ca_2Sr(C_2H_5CO_2)_6$, optical activity 2=18795
- $Ca_xSr_{1-x}TiO_3$, dielec. props. and structure 1=19930
- $Ca_2Ta_2O_{22}$, crystal structure atomic, preparation 4=2074
- $CaTiO_3$, crystal structure, effect of neutron irrad. 4=26564
- $CaTiO_3$, dielectric const. rel. to temp. 3=4945
- $CaTiO_3$, i.r. reflection and transmission spectra 4=26184
- $CaTiO_3$, paraelectric, microwave dielec. const. 4=26121

Calcium compounds—contd

- $CaTiO_3$ (perovskite), internal elec. field, calc. 2=3813, 16774
- $CaTiO_3$, puckering phase transitions 0=13654
- $CaTiO_3$ remanent polarization rel. to temp. 2=8471, 10565
- $CaWO_4$, α-scintillations, low temp. depend. 0=10078
- $CaWO_4$, Ce^{3+} and Er^{3+} e.s.r. 1=14792
- $CaWO_4$, cellular structure, grown from melt 3=25665
- $CaWO_4$, crystal field at Ca^{2+} site 3=12902
- $CaWO_4$ crystal growth defects 4=30817
- $CaWO_4$, crystal structure 4=10532
- $CaWO_4$, crystal structure 4=10533
- $CaWO_4$, Czochralski growth for laser prod. 2=23820
- $CaWO_4$, e.s.r. of Mn^{2+} and Gd^{3+} S-state ions in 0=10221
- $CaWO_4$, electron or light excited, luminescence 0=1753
- $CaWO_4$, etch-pit obs. of dislocations 4=6838
- $CaWO_4$, growth of single crystals for e.s.r. studies 0=6265
- $CaWO_4$, i.r. reflection, lattice vibr. 4=25841
- $CaWO_4$, ion irrad; excitation and deterioration 1=9002
- $CaWO_4$, Ir and Rh scattering centres 4=9950
- $CaWO_4$, luminesc., decay rel. to traps 2=6613
- $CaWo_4$, luminescence decay time, ion excitation 0=1756
- $CaWO_4$, luminescence due to X-rays 3=4982
- $CaWO_4$, luminescence excitatn. by ions 3=970
- $CaWO_4$, luminesc., field-stimulated, absence below 2×10^5 V/cm 2=12629
- $CaWO_4$, luminesc. induced by α-particles rel. to temp. 2=2256
- $CaWO_4$, luminesc. of powders in elec. field 2=14737
- $CaWO_4$, luminesc. under Z-rays, impurity effects 2=6597
- $CaWO_4$, Na-compensated, laser threshold rel. to Nd conc. 4=10168
- $CaWO_4$, Nd^{3+}, e.s.r. and spin–lattice relaxation 4=1884
- $CaWO_4$, Nd^{3+} fluorescence excitation 3=13199
- $CaWO_4$, Nd^{3+} n.m.r., Na compensated or uncompensated 4=13348
- $CaWO_4$, paramagnetic resonance of irradiated crystals 1=3655
- $CaWO_4$, refractive index meas., temp. depend. 4=7092
- $CaWO_4$ (scheelite), Er luminescence spectrum in 0=13706
- $CaWO_4$, scintillation props. 0=11347
- $CaWO_4$, structure, neutron diffn. analysis 4=29102
- $CaWO_4$, synthesis, flux effects with KCl or $LiSO_4$ 4=10211
- $CaWO_4$, Tb^{3+} e.s.r., meas. and theory 2=12817
- $CaWO_4$, trivalent rare earth substitution and coupled substitution theory 4=15474-5
- $CaWO_4$, as X-ray screen coating 2=14735
- $CaWO_4$, Yb^{3+} and Ce^{3+} e.p.r. 4=23058
- $CaWO_4$:Er^{3+}, optical maser action 2=23546
- $CaWO_4$ with Mn^{2+}, Fe^{3+}, Nd^{3+}, paramag. resonance determ. of ion sites 4=4409
- $CaWO_4$:Nd, crystal growth, rel. to laser threshold 4=19308
- $CaWO_4$:Nd lasers, relax. osc. calc. 4=3229
- $CaWO_4$: Nd, photolytic and reduction colouring 4=22643
- $CaWO_4$:Nd, Pr doped, colouring, vacuum reduction or photolytic prod. 4=12814
- $CaWO_4$:Nd^{3+}, laser action, harmonic generation and mixing with ruby beam 3=7359
- $CaWO_4$:Nd^{3+}, maser oscill., 0·9 and 1·5 μ 3=25447
- $CaWO_4$:Nd^{3+}, optical maser, continuous operation 2=12588, 23547
- $CaWO_4$: Nd^{3+}, p.m.r., model for W site substitution 4=20620
- $CaWO_4$–$PbWO_4$: Sm, luminescence 4=22919
- $CaWO_4$:Pr^{3+}, optical maser emission 2=18815
- $CaWO_4$: Sm, luminescence 1=6222
- Ca_3WO_6, work function 0=19707
- $Ca_2Y_2[Si_4O_{12}][CO_3]$ H_2O, kainosite, unit cell and space group 3=13473
- Ca–Zn cpds., lattice energies 2=17038
- $CaZn_2$, heat of vaporization 4=366
- $CaZn_2$, vapour pressure 4=366
- $CaZrO_3$, dielec. permittivity temp. depend., at liq. He temp. 0=2918
- $CaZrO_3$, puckering phase transitions 0=13654
- $Ca_{0.16}Zr_{0.84}O_{1.84}$, isothermal grain growth 4=13644
- $CaZr(PO_4)_2$, crystal structure, atomic 4=2073
- $CaZrS_3$, synthesis and crystal structure 3=8850

Calorimeters
  adiabatic 1=16167
  adiabatic differential, for study of stored energy in neutron irradiated Fe 4=4098
  adiabatic dynamic calorimeter 4=16284
  adiabatic, heating rate 4=2879
  adiabatic "heating-up" [aufheiz] 3=11989
  adiabatic, for heats of alloying meas. 3=24097

Calorimeters—contd
  adiabatic, for small samples 0=16924
  adiabatic, for specific heats 50°-650°C 3=16831
  adiabatic, for substances with low thermal cond. 2=15794
  adiabatic, two-valued response regulator 1=8260
  aneroid, with replaceable reaction cells 4=8493
  automatic adiabatic soln. cal., thermistor controlled 3=24095
  automatic, for thermal anal. of steel 2=1303
  bomb, aneriod, for heat of combustion meas. 0=19524
  bomb, for critical state exper. 1=13020
  bomb, for heat of combustion meas. of fuels 1=16169
  Calvet differential calorimeter 1=9504
  Calvet microcalorimeter used in quantitative differential analysis, calibration 4=14434
  Calvet microcalorimeter, specific heat meas. 1=18670
  Calvet, for specific heat meas. 4=27366
  circuit, const. power dissipation over wide temp. range 2=9441
  combustion, semi-micro static aneroid 4=8494
  continuous-flow, for heat of adsorption meas. 1=20679
  continuous-heating, for 15°-300°K 2=19760
  copper-block combustion, using thermistor 2=11528
  deformation calorimeter for stored energy meas. in cold working 1=2508
  differential, high temperature 4=18472
  differential, meas. stored energy release from neutron irrad. uranium oxides 2=6393
  differential microcalorimeters, short time constant 0=10813
  differential resistance bridge, high temp. 4=21349
  differential scanning, direct transition energy meas. 4=26773
  dosimeter, point, appl. to 10, 20 MeV e's 4=5898
  drop calorimeter for heat contents, 100-3000°C 2=2925, 15797
  for enthalpy analysis, 0—300°C 4=8492
  for flux-density distrib. in focal vol. of arc image furnace 4=8491
  γ-ray, adiabatic 1=13379
  for γ-ray intensity meas. 1=5706
  for γ-ray intensity meas. 1=10872
  for gas specific heat meas., high press. 4=16283
  for heat capacity, condensed gases above their b.p. 2=7448
  heat of formation meas., 20°-80°C, graphite 4=355
  for heats of adsorption measurements 4=11399
  for heats of mixing, binary liquids 2=1304
  high temp., enthalpy meas. 3=25198
  high temp. (> 1000°C) for heat of formation of refractory cpds. 1=16170
  ice calorimeter, all glass, for heat exchange meas. 2=19761
  isochronal differential microcalorimeter 3=21606
  isothermal—adiabatic automatically controlled 2=7449
  isothermal, low temp., construction and calibration 4=21350
  isothermal, for 0.8-20°K 0=15811
  isothermal, for reactor radiation dosimetry 3=696
  isothermal, with sample temp. control 4=14436
  for lac, and other poor conductors 0=7008
  for laser energy meas., Calvet 4=24892
  for liquid crystals 4=18475
  liquid metal soln. calorimeter 2=15796
  low-temp. (2—200°K) adiabatic instrument for condensed substs. 2=6269
  low temps. (10°—300°K), adiabatic 2=22081
  for meas. heats of soln. and reaction in molten salts up to 400°C 4=16282
  metal-block, rotatable, with thermoelec. meas. 3=21603
  for metals, alloys, in deformation, liquid—gas film 3=19058
  micro, metal-block, for combustion heat meas. 4=2880
  for microbial systems, continuously recording 1=5371
  microbomb suitable for microcalorimeter 1=2910
  microcalorimeter, adiabatic, for radioactivity meas. 3=6188
  microcalorimeter, adiabatic, for radioactivity meas. 4=6260
  microcalorimeter, calibration using Peltier effect 4=27367
  microcalorimeter, E. Calvet type, thermoelec. calibration 3=3916

Calorimeters—contd
- microcalorimeter, compensated, for thermal analysis 2=19138
- microcalorimeter, millimeter-wave 3=12043
- microcalorimeter for radiation dose meas., portable 4=22053
- microcalorimeters, for activity of radioactive source 2=12149
- microcalorimeters, high detectivity 3=19057
- for mm-wave power level measurement 1=12016
- Nernst–Eucken, for molar heats of solids, 10°K-290°K 3=21607
- nuclear heating in reactor, meas. 2=17684
- for nuclear reactors, high radiation fields 3=12740
- optical maser energy meas. 2=13481

sputtering, under Cs ion bombard., cathode sputtering ratio 4=24753
stainless, proton prod. by H_2^+ ion impact 4=28270
steel, on C, spectral anal., local in depth 2=19179
in stellar atmospheres, effect on ionization 1=18114
stopping power for α-particles 1=12132
strained, elementary atomic layer diameter, 1000° - 2000°C 4=29103
structure, black, particles, internal, and oxides 3=25804
in subdwarfs, effect on evolution 3=1526
surface area meas., effect of activated diffusion 4=23551
surface area meas., effect of capillary condensation 4=23552
surface energy distrib. of C black 4=23550
tantalum-carbon system, field emission 3=14622
target for positive ion accel., preparation 2=5408
thermal diffusivity 3=14396
thermal expansion, −196° to 2000° C, polycrystalline specimen 4=22505
thermocouples for use in C atmospheres at >2000°C 1=4502
thin film preparation 1=1449
thin films, electron microscopy image contrasts 4=23574
in V targets, deuteron interactions 4=22167
valence electrons, approx. wave-functions 0=469
vapour condensed in inert matrices, absorpt. spectra 2=22976-7
vapour-deposited, structure rel. to temp. 1=11564

Carbon—contd
vapour molecules condensed in Ne, Ar, Xe matrices at 4°K and 20°K, u.v. and i.r. spectra 4=12472-3
vapourization, by laser, 30 MW, photographic obs. 3=21627
vibrational molec. transitions, rel. to stellar spectra 1=15505
vitreous, preparation and use as crucible material 3=21181
wear rel. to elastic moduli of brush materials 3=20761
Young's modulus, at high temperatures 4=23131
X-ray Compton scatt. from C blacks 2=5617
X-ray K-line, absolute intensity meas. 0=5876
X-ray scatt., small and intermediate angles, effect of absorbed H_2O and CCl_4 2=6862
X-ray yield, on electron bomb. 2=14697
X-ray yield (K), 1.5-44 A, by 1.5 MeV protons 4=17593
C black, crystal structure by Fourier method 2=10841
C black, graphitized, absorption processes 2=10944-5
C–plastic electron-microscope replicas 2=23944
C-replica method for Si-surface examination 4=26706
C^{11} loss from plastic foils after nuclear formation, diffusion of gaseous products 1=11008
C^{12} as basis for new atomic weights scale 2=14184
C^{12} emulsion tracks, photometric analysis 0=199
C^{12} ions, energy loss in Ni, O_2 and nuclear emulsions 0=17051
C^{12} ions, track widths 0=200
C^{12} prodn. rate in the burning process 3=12581
C^{12}, tracks in nuclear emulsions 0=12777
$C^{12,13}$ ions charge states 4=24564
C^{13} levels, use for obtaining two-body interaction parameters 4=17000
C^{14}, aqueous solutions, scintillation counting 0=5687
C^{14} content of stony meteorites 1=19476
C^{14} dating, background suppression 3=24538
C^{14} det. by immersion of counters into sample 1=8629
C^{14}, diffusivity in Si 2=3939
C^{14} half life 2=5831-2
C^{14} increase due to nuclear tests, May 1962, 9-78° N 4=20855
C^{14} in plant oils, distribution analysis 2=11214
C^{14}, in stratosphere 0=1980
C^{14} in upper troposphere, Spring 1962. 3=25911
C^{16-20}, predicted new isotopes 0=13396
C I atom, photoionization cross-section 4=18677
CI, visible spectrum, transition probability, meas. 2=3704
C–C inelastic scatt. 2=12225
C ions, range in solids and gases 2=7674
C^- bound free continuum 1=5963
C^-, bound states rel. to phase shifts 4=19989
C^-, electron photodetachment and atomic electron scatt. 2=12298
C^- ions, structure and photodetachment spectrum 2=6088
C^-, photodetachment spectrum 3=4003
C^+, charge-transfer cross-section 0=12589
C_2 molecule, $A'\,{}^3\Sigma_g^- - X'\,{}^3\Pi_u$ band system 3=8250
C_2, molecule, $A^2\Pi g$ state, pot. energy curves 2=12316
C_2, mol., $B^3\Pi g$ state, perturbations calc. 2=22961
C_2, CN free radical temps., in $O_2-C_2H_2$, $O_2-C_2N_2$ detonation in shock tube 4=7757
C_2 molecules in comet Mrkos 1955e, density 1=15431
C_2 density in comets 1=18056
C_2, mol., far-u.v. spectrum 2=14284
C_2 ground electronic state, Swan-bands of comets, excitation mechanism 0=14406
C_2 molecule, ground state in gas phase 0=4215
C_2, ht. of sublimation and dissociation energy 2=2028
C_2, low excited states 0=5960
C_2 molecules in lunar Alphonsus crater, origin 1=11674
C_2 molecule, Phillips system and mol. consts. 3=8251
C_2, mol., potential energy curves 2=14299
C_2 spectra in solid A, Kr, Xe 0=20661
C_2 spectrum, Swan bands 3=19975
C_2, thermodynamic props. 0=6836
C_2 vibration-temp., rel. to pressure 2=5318
C_2, mol., vib. transitions calc. 2=20768
C_2, C_3, C_4, mols., electronic density distrib., and bonds 3=22540
C_3 molecule, spectrum 2=6166
C_3, potential const., vibrational, abnormality 4=25608
C_3 radical, spectrum 4=6613
C_3, SCF–LCAO–MO wave function 2=2014

Carbon—contd
- C_4 molecule, electronic states 2=2005
- $C + CCl \rightarrow C_2^* + Cl$, reaction, energy distribution 3=11346
- $C + CH \rightarrow C_2^* + H$ reaction, energy distribution 3=11346

Carbon compounds
- See also Organic compounds.
- carbide mixed crystals and hard carbides, elec. cond. at high melting points 0=17995
- carbides, hard, plastic deformation, high temp. meas. 1=1350

- C–Co–Mn, mag. props., structure 0=3010
- CD_4, adsorption on graphite 2=4497
- CF, CF_2, spectra, absorpt., pre-dissociation 3=15345

Carbon compounds—contd
- CF, far-u.v. spectrum 2=14284
- CF_2 trapped in argon matrix, u.v. absorpt. 2=18492
- CF_2, triple point temperature 3=132
- CF_3 reactions, bond and activation energies, correl. 4=30895
- CF_4, dielec. const., 800 Mc/s, 295° to 630°K 4=14220
- CF_4, diffusion of methane, meas. 4=11238
- CF_4 diffusion in CCl_4 4=18189
- CF_4, double-bonding 2=6216
- CF_4, $H^{+,2+}$ ions, interaction energies 2=12354
- CF_4, mean square vibr. amplitudes, rotational distortion consts., and shrinkage consts. 4=22395
- CF_4, mol. Jahn–Teller distortions 2=22983
- CF_4, Raman intensities for $\nu_1(a_1)$ modes 3=22559
- CF_4, target box for bombardment 0=17586
- CF_4, transport props. meas., rotational relax. 4=5241
- CF_2Cl_2, liq., spin–lattice relax. of F 3=21409
- CF_2Cl_2–H mixtures, self-diffusion 2=7247
- CF_4–SF_6 mixtures, viscosity and diffusion coeffts. 4=2725
- C_2F_4, vibr. energy transfer with CHF_3, CF_4 and SF_6 3=6434
- C_2F_6, $H^{+,2+}$ ions interaction energies 2=12354
- C_3F_8, gas, ioniz. and attachment coeffts. calc. 4=5557
- C_7F_{14}, ioniz. and attachment cross-sections meas. 4=16436
- C_8F_{12}, crystal struct., atomic 4=29151
- $CF_2BrCFBrCl$, n. m. r., time-weighed averaged approx. 4=5214
- C–Fe, donor-acceptor interactions 0=732
- C–Fe, Fe migration, in d.c. field, temp. depend. 1=12657
- CH band spectrum in O and N–hydrocarbon reactions 2=12961
- CH, electronic structure 0=7774-5
- CH, spectrum, 3000-5000 A, spectrophotometric atlas 1=14042
- CH–CH^+ equilib. in interstellar space 2=21689
- CH, CH_2, π^-at rest $+ p \rightarrow \pi^0 + n$ to stopped π, ratio 3=19677
- CH, CH_2, CH_3 radicals, lower electron states 2=12336
- $CHCl_3$, liq., i. r. absorpt., spectrum, 740-810cm^{-1} 4=30455
- CI_4, mol. constants from vibr. spectra 2=16541
- CI_4, thermodynamic props., gas, 100—1000°K, calc. 4=8247
- C_8K, heat of formation, rel. to graphite polymorphism 4=30534
- CN, $A^2\Pi$ and $X^2\Sigma$ states, vibr.-rot. analysis 3=2611
- CN band spectrum in N–hydrocarbon reactions 2=12961
- CN density in comets 1=18056
- CN, dipole moment for violet band electronic transition 4=22349
- CN emission from active N flames 1=14045
- CN, excited $^2\pi$ lifetime, direct meas. 4=28185
- CN, formation and reaction in shock waves 2=6879
- CN, Franck—Condon factors to high vibr. quantum numbers 4=15329
- CN, molecular dipole moment of electronic transition of violet band, matrix calc. 4=30429
- CN mol., rot. temp. from solar lines 4=26951
- CN, potential curves and rot. perturbations 2=20798
- CN radical, $B^2\Sigma^+_u$–$X^2\Sigma^+_g$ system 2=18452
- CN radical; heat of formation 2=15130
- CN radicals, excited, microwave transitions, optical detect. 3=6390
- CN, red system (0, 0) and (0, 1) band spectra, analysis 0=20618
- CN rotational perturbations, theory 2=22962
- CN. in solar atm., violet spectral system 4=23921
- CN spectral "tail" bands in active nitrogen flames 4=30430
- CN, violet band electronic transition, matrix element for dipole moment 4=15330
- $CN^{0,+}$, far-u.v. spectra 2=14284
- C_2N_2 flames 1=20738
- $C_2N_2^{15}$, gaseous and polycrystalline, i. r. spectra, and intermolecular coupling in crystal 4=28211
- C_2N_2 halides, vibr. amplitudes and thermodynamic functions 4=1274
- $C_4N_4^+$, mass spectroscopic obs. 3=21714
- CO, $a^3\Pi$ level, excited by iodine lamp, photochem. 4=13738
- CO, absorpt. band, test of theoretical model approx. 4=9743
- CO, absorption bands of dense forms and solns. 3=17572
- CO, absorption coeffs., 1006-600 A 4=20038

Carbon compounds—contd
CO, absorption spectra, 1850 to 4000 A 4=11249
CO, abundance in ground level air 3=13664
CO with admixtures, thermal relaxation 4=5244
CO, adsorbed on Fe, i.r. spectrum 2=23963
CO, adsorbed on Fe, molecular rotation spectral study 2=19116
CO, adsorbed with N on polycryst. W, interactions 4=23607
CO, adsorption on alumina 2=17076
CO, adsorption on Ba, ultra-high vacuum 3=5474
CO, adsorption on Cu 3=11322
CO, adsorption on Cu$_2$O, mag. susceptibility changes 4=23596
CO, adsorption, diffusion and evaporation on W 0=3325
CO, adsorption in graphite 3=13569
CO, adsorption by Mo, films, 10^{-6}—10^{-8} mm, −195- + 22°C 3=16146
CO, adsorption on Ni films, var. thickness, temp., from elec. cond. 4=17847
CO adsorption on Ni and its interaction with O$_2$ 4=20820
CO, adsorption on Ni, meas. using radioactive tracer 0=14152
CO, adsorption on NiO, depletive 3=25781
CO, adsorption on Pt 3=13571
CO, adsorption on Ta, dissociation, O$_2$ field emission patterns 4=26726-7
CO, adsorption on tungsten 1=20742
CO, adsorption on W 2=8895, 8917
CO, adsorption on W, rel. to work function 3=18394
CO, adsorption on W, sticking coeff., effect of surface coverage and temp. 4=17849
CO, α-radiolysis 0=12108
CO in Ar matrix, i.r. spectra 4=20039
CO—Ar gas mixtures, behaviour of low-energy electrons 1=11911
CO, atmospheric distrib., spectral obs. 2=8951
CO, attachment of slow electrons 0=242
CO, $b^3\Sigma^+ - a^3\pi$ system, electronic transition moment 0=17763
CO band spectra 3=10503
CO, band spectrum triplet system intensities 1=11095
CO boiling point, detm. 3=9659
CO, catalytic oxidation, elec. cond. of catalyst MnO$_2$ 1=5111
CO, chemisorption on Cu, Ag, Au, Fe, Co, Ni, work function, bond 0=18452
CO, chemisorption on Fe 2=12966
CO, chemisorption on Ni mechanism 2=10980
CO chemisorption on ZnO 2=8916
CO—CH$_4$ solution, heat of mixing and volume change 3=1682
CO and CO$^+$, excitation functions, visible band spectrum 2=6174
CO and CO$^+$, mol. electronic states, dipole moments 2=10265
CO–CO$_2$ atmospheres, use in prep. and free energy determ of transition metal oxides 4=15840
CO, CO$_2$, CH$_4$ gas mixture, i. r. absorption monitoring, using multi-image light pipe system 4=27296
CO and CO$_2$, in incandescent filaments 0=1950
CO, CO$_2$, in M-type stars 3=11574
CO and CO$_2$, Townsend discharge, photon absorption 3=4029
CO, collision cross-sections and vibrational relaxation 4=9794
CO crystals, librational motion 3=745
CO, diffusion in CO-CO and CO-N$_2$ systems 3=7232
CO, diffusion of methane, meas. 4=11238
CO, diffusion in Mo, W. Nb, above 1000°C, degassing 4=22620
CO, diffusion in Ni, 970-1320°C 4=22622
CO, diffusion in O$_2$, and intermolecular potentials 2=2764
CO, dissociation by electron impact, O$^-$ prod. 3=361
CO dissociation from surfaces by electron bombardment 1=10667
CO, dissociative ionization by ion impact 3=21709
CO, electron attachment and ionization meas. 4=5556
CO, electron diffusion—mobility coeffs. ratio 3=4023
CO, electron impact ionization 2=1385
CO, electron inelastic collision cross-sections for three transitions 4=12445
CO, electron interchange with H atom beam 2=14182
CO, electron interchange with H atom beam 3=6342
CO, electron photoemission, retarding potential meas. 4=16435

Carbon compounds—contd
CO, electron scatt., elastic and inelast., from electron transport 4=11509
CO, electronic structure 4=22363
CO, electronic structure and binding energy 0=17835
CO, equation of state, theory confirmation 4=11229
CO, evolution from and diffusion in Ni at 800-900°C 0=12120
CO, excitation by electron impact, using trapped-electron method 0=2755
CO, excitation function due to electrons 2=16515
CO excited by active N, use of vibrational energy for optical maser 4=27685
CO, far-u.v. spectrum 2=14284
CO, field desorption and corrosion of W and Ir 3=18396
CO, field desorption from W 4=7725
CO, first overtone band, line width and intensity 2=8091
CO, flame bands 3=25091
CO flame bands 4=6560
CO, flash desorption 1=4101
CO, formation on incandescent W 2=8911
CO, 4.7μ band, band model appl. 4=25602
CO, 4.7μ band total absorptance 4=28184
CO, Franck—Coudon factors 4=27480
CO, γ-radiolysis with inert gases, meas. 4=13741
CO, gas phase vibrational relaxation 2=3726
CO gas, slow-electron drift vel. 77°–443°K 2=19900
CO gas, vibrational relaxation 3=7243
CO, H passage through, electron loss and capture 4=463
CO—He, vibrational relaxation of CO 4=20040
CO—hydrocarbon mixtures, virial coeffs. meas. 4=24261
CO, i.r. absorpt. at high temp. 2=2776
CO, i.r. absorpt. line broadening 2=14272
CO, i.r. emission from Hg* → CO electronic-vibrational transfer 3=10506
CO, i.r. emissivity on anharmonic model 2=12327
CO, i.r. fluorescence, by radiation chopping techniques 4=15331
CO, i.r. resonance fluorescence in vibr.-rot. band 2=12321
CO, i.r. spectra of liq. and solid 3=1693
CO, i.r. spectrum of solid 1=14600
CO, i.r. spectrum, in solid and in solid matrices 1=14601
CO, i.r. temp. and line strength meas., r.f. discharge excitation 0=5923
CO, ionization and attachment coeffs. in uniform fields 1=16264
CO, ionization by charge transfer from fast H beam, neg. ion formation 1=16277
CO, ionization cross-sections near threshold, electron impact 1=16257
CO, ionization by electrons and protons, Born approx. 2=9529
CO, ionization by fast H atoms 0=1102
CO, ionization, mass spectrometric meas. 3=12070
CO ionization by protons. 0.15-1.1MeV 3=4006
CO isobaric mols., separation by thermal diffusion 4=20841
CO, isotope exchange with Ni(CO)$_4$ 3=3380
C^{12}O^{16}, J = 5 → 6 rotational line meas. 4=24858
CO, Joshi effect, surface origin 4=467
CO—Kr, vibrational relaxation of CO 4=20040
CO, laser, discharge, electric, pulsed, $B'\Sigma - A'\pi$ band transitions 4=8976
CO, line-strengths in 2-0 absorpt. band 3=4744
CO, in liq. O$_2$, and liq. and solid N$_2$ and Ar, O–2 transition 4=25638
CO, liquid, self diffusion, 69-78°K 4=21118
CO, liquid systems, binary, with N and A 3=132
CO, lower excited electronic states 0=5959
CO, luminescence, excited by active N 4=9701
CO, major i.r. bands, total absorptance 2=20800
CO in metals, chromatographic gas analysis 2=21603
CO, millimetre radiowave absorption 2=7261
CO, molecular rotation 2=8075
CO, molecule, elec. polarizability tensor calc. 4=1256
CO molecule, excitation 3=10514
CO, molecule, Lozier apparatus investigation 2=3788
CO molecule, $1^1\Sigma^-$ state 2=20799
CO molecule, triplet band system, analysis 2=544
CO—N, condensed from elec. discharge, emission spectra 2=10251

Carbon compounds—contd
- CO—N_2, spectra, simultaneous transition band, liquid, solid, gaseous 4=22351
- CO—Ne, vibrational relaxation of CO 4=20040
- CO—O(^{1}D) photolysis, 77°K 4=13735
- CO—O_2, diffusion at high temp. 0=3563
- CO—O_2 photolysis in solutions, 77°K 4=13734
- CO, oxidation on NiO catalyst, mechanism 4=17862
- CO oxidation, ZnO photosensitized, kinetics, activation energy 4=17869
- CO positive ion production, by energetic He^+ impact 4=24569

- CO_2, dissociation by electron impact, O^- prod. 3=361

Carbon compounds — contd

CO_2, dissociation rate 3=15389
CO_2, dissociation at 3500°-6000°K 4=28268
CO_2, dissolved in CCl_4, and CS_2, i.r. absorption 1=18412
CO_2, effect of H_2 and D_2 on relaxation time 3=16658
CO_2, effect on H_2O Raman spectrum 4=14169
CO_2, elec. discharge, gas-ionizing radiation 2=17795
CO_2, elec. discharge, spatial expansion 2=3013
CO_2, electrodeless discharge, electron mobility
CO_2, electron attachment and ionization meas. 4=5556
CO_2, electron-beam energy loss in 0=19764
CO_2, electron diffusion—mobility coeffs. ratio 3=4023
CO_2 gas, electron drift velocities in inert gas—CO_2 mixtures 4=24274
CO_2, electron scatt., elastic and inelast., from electron transport 4=11509
CO_2, electron transport, time-of-flight meas. 3=23940
CO_2 electrons, low-energy, drift velocity 4=27479
CO_2, emissivity, 4.3μ, 1500-3000°K 4=14217
CO_2, enriched with 10 at % O^{18}, i.r. spectrum 4=12477
CO_2, equation of state, theory confirmation 4=11229
CO_2, equations of state, 0°-1000°C, up to 100 bar pressure 4=5231
CO_2, evolution from Ni at 800-900°C 0=12120
CO_2, far-u.v. spectrum 2=14284
CO_2, 15 and 4.3μ band absorpt., correl. with CO_2 4=27221
CO_2, flow in Laval nozzle, enrichment by H_2 1=15929
CO_2, flow through porous media 1=10530
CO_2—foreign gas mixtures, dielectric loss 4=27226
CO_2, 4.3 μ band emission at 1200°K 4=6585
CO_2, 4.3μ band, lineshape in wing beyond band head 4=25669
CO_2, gas flow, free-molecular, momentum transfer to metal surfaces 3=5456
CO_2, gas flow through nozzle 1=15928
CO_2 glow discharge, positive column electron and gas temp. 1=16284
CO_2 glow discharge, positive ion 4=18726
CO_2, ground state, extended basis-set LCSTO-MO-SCF calc. 3=10528
CO_2, H ion prod. in, by proton beams 2=1386
CO_2 and H mixture, simultaneous vibrational transitions 0=7749
CO_2, and H_2 mixtures, self-diffusion 2=7247
(CO_2−H_2), thermal diffusion, 300−480°K 0=959
CO_2—H_2O hot mixtures, spectral emissivities in 2.7 μ region 1=11097
CO_2—H_2O system, in turbulent motion, mass transfer, conc. effect 3=16152
CO_2—H_2O, two phase region, up to 3500 bar 4=8508
CO_2 with He and H_2, diffusion and thermal diffusion meas. 0=14688
CO_2−He mixture, absorpt. of sound rel. to vibr. relax. 4=14213
CO_2, heat transfer from inside wall of hot tube 2=9419
CO_2, high-resolution i.r. spectrum 2=1997
CO_2, high-temp. absorption at 4.4 μ 1=6906
CO_2 high-temp., kinetic and transport parameters 1=18466
CO_2, higher ionization potential 0=7779
CO_2, "hot" bands, effect of pressure modulation 2=2777
CO_2, i.r. absorpt. coeff. of hot gas 2=19618
CO_2, i.r. absorption bands 0=8717
CO_2, i.r. absorpt. line broadening 2=14272
CO_2, i.r. absorption lines, 5.3-4.6 μ 3=19991
CO_2, i.r. absorption in vibration−rotational bands 0=9793-4
CO_2, i.r. emissivity, 4.3 μ band 3=17584
$C^{13}O_2$, i.r. spectra, rotational perturb. 3=6399-400
CO_2, i.r. spectral emissivities, rel. to vibr.-rotation 2=8094
CO_2, i.r. spectral emissivity in 4.3 μ region 1=4379
CO_2, i.r. spectral emissivity, 2.7 μ band 4=20064
CO_2, i.r. transmittance 4=11247
CO_2, intense beam prod. using nozzle 3=4790
CO_2, interaction potential with N_2 2=6235
CO_2, interferometric spectra in far i.r. 1=841
CO_2, intermolec. forces and self-diffusion rel. to temp. 3=20033
CO_2, intermolecular, Morse potential force consts. from viscosity 4=9787
CO_2, ion formation, negative, by electron resonance capture 2=7559
CO_2, ion-pair formation, by 100-300 kV X-rays 2=7560

Carbon compounds—contd

CO_2, gas, ionization and breakdown 1=1892
CO_2, ionization cross-section and electron attachment 4=24565
CO_2, ionization, electron avalanches analysis 2=3003
CO_2, ionization, by electrons, excited states 0=12581
CO_2, ionization by 5·3 MeV α-particles 1=18760
CO_2, ionization potential meas. by mass spectrometry, influence of mag. field 4=21458
CO_2, ionized, slightly, cyclotron reson., collision frequ. det. 4=461
CO_2, isotopic analysis 2=20061
CO_2 gas, isotrope of tension of acoustic radiation 2=19617
CO_2, jet, supersonic, as ion beam charge transfer target 4=14768
CO_2, laser, rot., vibr. −rot. transitions 4=24896
CO_2 liquid sat. with N_2, freezing pt., pressure depend. 0=8709
CO_2, Lorentz−Lorenz functions 0=8713
CO_2, lubricating full journal bearings 0=5046
CO_2, mass spectra, high-energy O^+ ions 0=19615
CO_2, microwave absorption in compressed gas 2=13379
CO_2, in mixtures with CH_4, viscosity 1=4364
CO_2, molecular beam, ionization and accel. 2=2032
CO_2 molec. crystals, far i.r. spectra 4=20446
CO_2 molecular quadrupole moment 3=12835
CO_2, molecular vibrational energies for 8 isotopic species 2=22978
CO_2, mol. vibr. excitation by fast beta rays 4=22374
CO_2, near crit. point, u.s. light diffr., fluctuation effects 2=2939
CO_2, 1.9μ bands, integrated intensity meas. in range 1400°—2500°K 4=12475
CO_2−N_2 mixture, pressure depend. 0=8676
CO_2−N_2 phase equilibria 0=8709
CO_2, with N_2, solid—vapour equilib. system 4=11425
CO_2, ν_3, 4.3 μ absorption, 1200° to 2400° K 3=1731
CO_2, gas, ν_3 fundamental at 1200°K, model 3=5467
CO_2, as nuclei in atmosphere 0=14191
CO_2−O_2 diffusion at high temp. 0=3563
CO_2, with O_2+2H_2, detonation 1=7908
CO_2−O_2 mixtures, detonation front motion 0=994
CO_2−O_2−N_2, phase equilibria 0=8709
CO_2−O_2, phase equilibria 0=8709
CO_2, optico-acoustic analyser, temp. variation 0=10380
CO_2, P/T/Entropy diagrams 1=6989
CO_2 partial pressure in atmosphere and sea water 1=15223
CO_2, gas, point-to-plane discharges 2=9545
CO_2, polymeric ions $(CO_2)^+{}_n$, (n ⩽ 23) 1=9960
CO_2 pulmonary diffusion, rel. to human cardiac output 3=3637
CO_2, quadrupole moment 3=12841
CO_2, radiation spectrum, shock wave heated 3=11835
CO_2, Raman spectra 0=17746
CO_2, Raman spectra and mol. collisions 3=7247
CO_2, "rectified" u.s. wave, light diffr. 2=15592
CO_2, Redhead vacuum gauge pumping rate sensitivity 2=21954
CO_2, refractivity, second virial coeff. 3=3835
CO_2, relation between viscosity and thermal conductivity 0=6734
CO_2, relaxation time meas. 0=4186
$C^{12}O_2$, rotational perturbations 4=9736
CO_2, Rydberg absorpt. series and ionization potential 2=16524
CO_2, sampler, high-volume, atmospheric, for radioactivity meas. 3=13690
CO_2, second virial coefficient 4=24262
CO_2, second virial coeff. estimation 2=11414
CO_2, second virial coeff., extrapolation to high-temp. field 2=11411
CO_2, self diffusion coeffs. at 1180°−1680°K 2=19609
CO_2, shock-front structure and reflectivity 1=167
CO_2, shock tube study, vibr. relax. 2=7244
CO_2, shock waves, Mach 2.5−5.5, vibr. relaxation freqs. 4=5291
CO_2, slow electron diffusion meas. 2=13381
CO_2 gas, slow-electron drift vel. 77°−443°K 2=19900
CO_2, solid, elastic const., u.s. meas. 0=11965
CO_2, solid and gaseous, electrical charge effects 0=8977
CO_2, solid, shock compressibility 2=7192, 13320
CO_2, sorption by Ba films 2=844

Carbon compounds—contd

    solid surface in contact with liq., cavitation destruction mechanism 4=7467
    sonoluminescence and cavitating bubbles, phase relation 1=12889
    sonoluminescence, heat loss from bubbles 3=18818

Cavitation—contd
and sonoluminescence in liquids 0=19163
super-cavitation profile, in presence of free surface 4=11153
temperature jump, double 4=14118
thin films of viscous liquids, photographic obs. 4=8150
transducers, limiting-factor in 3=23976
in turbulent boundary layers, frequency, theory 1=15804
in u.s. machining of solids 0=3390
ultrasonic 3=16594
ultrasonic 4=8353
in ultrasonic generator, intensity variation 2=2817
ultrasonic, meas. by chemical reactions 4=8351
ultrasonic, mechanism 2=9278
ultrasonic, nucleation by codmic rays 2=2686
ultrasonic, nucleation by fast neutrons 4=5142
ultrasonic nucleation process 4=5912
ultrasonic, statistical approach 4=2642
vapour—air bubbles, spherical, collapse 4=11165
vibration-induction theory 3=23862
wall-effects on collapse of bubbles 3=23861
water, acoustically induced, noise effect 2=11454
in water, effect on sound transmission 1=11812
water, erosion of Pb 2=12873
water, light emission 4=11166
water, sonoluminescence, effect of dissolved Ar, He, O_2, N_2 1=4345-6
in water, theory of flow near collapsing bubble 4=8149
water, u. s. cavitation, spectral indication of its origin 4=5143
water, u.s., by cosmic-ray neutrons, model 4=21080
water, in u.s. stationary field 3=18793
Al foil, by u.s. waves 4=11311
in $CClF_3$, u.s., neutron induced 3=14122
CH_2Cl_2, u.s. excited products 0=1964
H_2O, and luminescence, u.s. effects 4=14117
He, liquid, u.s., 1.2°-2.3°K meas. 4=18520
Hg, causing sonoluminescence 4=5192
KI solutions, and luminescence, u.s. effects 4=14117

Cavity resonators
See Electromagnetic oscillations; Resonators, acoustic.

Celestial mechanics
(Heading introduced in 1962).
acceleration, additional, due to curvilinear motion of centre of gravity 3=23657
analogy between artificial earth satellites and other celestial bodies, and gyroscopes 3=16320
artificial "comet" launching for rocket visibility 2=9124
asteriod, attracted by sun and heavy planet 3=11496
asteroid of negligible mass, affected by sun and a major planet 2=24079
asteroids, Kirkwood gaps, theory 3=13867
binaries, visual, orbit calc. 3=16409
binary stars with variable mass, with additional small non-Newtonian force 4=13873
canonical reduction, special case of n-body problem 2=4943
capture by earth of astron. body, vel. modification 2=13093
class of force functions generalizing functions of radial forces 4=29572
cluster of stars, moments of veloc. distrib. 4=15923
comet orbits, polygon approx. falsity 3=18586
comets, semimajor axis distrib., rel. to lifetimes 2=6993
Darwin ellipsoid pair stability 4=29359
disk of stars, gravitational stability 4=23879
disturbance, lifetime for remaining small, calc. 3=23656
disturbed motion eqns., variational solution 2=9048
double stars, orbit calculations 3=13851
earth—moon problem, plane restricted, periodic librations 3=7021
ER Orionis, orbit elements 2=7012
finite difference eqns., appl. to artificial satellites 2=9120
flight analysis in field of one attracting centre 4=15911
flight between two points in central field 4=15965
forward-rotatory motion in central Newton field 4=15910
foundations, establishment of system 2=24074
gaseous masses, oscillations, radial and nonradial, general variational principle 4=10781
gaseous masses radial and nonradial oscill., variational princ. 4=17971
general relativistic polytropic fluid spheres 4=29365

Celestial mechanics—contd
gravitational collapse, instabilities and Maclaurin spheroids 4=23841
gravitational collapse theory 4=29356
gravitational const. definition 2=17340
gravitational spheres of planets, Sun and Moon 4=10876
Hamiltonian and other systems, asymptotic theory with nearly periodic solutions 3=11669
irreversibility in small stellar dynamical systems 4=29401
isochronous derivs. matrix 4=15912
instability of equipartition state in fluid sphere 4=29358
instability of infinite rotating layer in mag. field in non-conducting medium 4=23844
Jean's gravitational instability 4=10785-6
Jeans gravitational instability 4=29355
Jeans' gravitational instability, spherically symm. 4=4832
Jean's incompressible spheroid oscillations 4=26891
Jeans medium gravitational instability 4=26889
Kepler's third law, elliptical orbits 2=24076
Kepler's third law, geometrical derivation 2=19386
Keplerian motion energetic identities 4=10798
Kepler's third law, without calculus 3=13850
LaPlace coeff., modified form 2=6977
libration points, circular orbits 3=3526
long period double stars orbit calc. 2=4791
long-range effects, use of Halphen's method 3=16321
mean motions in conditionally periodic separable systems 2=4866
meteorite, twin, large, orbital perturb. 4=2406
motion in central field with slight transversal thrusts 4=15964
motion of a star in Galaxy 3=11554
motion of two bodies with corpuscular radiation 4=10796
motion of two bodies of decreasing mass 3=13852
n-body problem, rectilinear motion on a straight line 2=24078
n-body problem with time-dependent forces 2=24075
n particle problem 4=2472
O and B stars, kinetics and galactic force 4=20904
optimum trajectories with repeated impulses 4=15966
orbit, circular, distant, long-period motion of the plane 4=26977
orbit determination from two observations 2=4713
orbit elements, calc. from radar obs. 2=6976
orbit elements, non-singular set 2=6974
orbit variations, asteroid Hilda (153) 3=16361
orbital collision probabilities using statistical mechanics 4=4845
orbits, elliptical, resisting medium effect 2=9049
orbits, Ptolemaic and Copernican, analogue display 2=19373
osculating orbits, Hansen's coordinates application 2=933
perihelion motion in electromagnetic gravitation theory 3=23737
periodic orbits, families, uniformity props. 4=4842
perturbation-of-elements method for comets 3=3527
perturbation theory used in von Zeipel's method 4=4843
planet and satellite rot.—translational perturbations due to flattening 2=24077
planet and satellite rot.—trans. perturbations due to flattening 3=3525
planetary distances, general relativity corrections 2=19283
planetary motion in rectangular coords., integration 2=17251
planetary eqns. with vectorial elements 3=21083
planetary, general perturbations, in rectangular coordinates 3=23669
planetary orbits in general relativity 4=4844
planets, layered oblate, free modes 3=11495
plasma, cylind., gravitational stability for uniform rotation 4=4831
plasma gravitational stability, viscous, heat cond., rot. 4=26890
Poynting—Robertson effect for spherical radiation source 2=15291
problems, rel. to astrodynamics 4=26888
radial velocity and proper motion, perspective secular changes 3=18587
random initial conditions and random parameters 2=4714
relativistic, satellite orbits around rotating sphere in linear Minkowski theory 4=24053

Celestial mechanics—contd
- resonance osc. for elliptic orbit round mass centre 4=20888
- Roche ellipsoids, equilibrium and stability 4=10782
- Roche ellipsoids, rel. to stabilities exchange princ. 4=10783
- rotating polytropes 4=29366
- satellite, lunar–solar disturbing functions, development 2=17312
- satellite motion about centre of mass, under gravitational moments 4=10937
- satellite motion near smaller body, three-body problem, time representation 2=13091
- satellite motion round oblate earth 2=13189
- satellite orbit, secular and crit. effects 4=13977
- satellite orbits, almost circular 2=21747
- satellite orbits, for communication 4=20962-3
- satellites, artificial, 24 hour, perturbed motion due to ellipticity 3=18665
- satellites, orbital change rel. to atmospheric density 2=4626
- satellites of planets, eccentricities, secular changes 4=2473
- satellites, rotation, effect of earth's oblateness 2=9127
- satellites, rotation and orientation meas. 2=9129
- Saturn's rings, stability 4=13920
- Schwarzschild limit gas sphere instabilities 4=29357
- self-gravitating disk of matter, structure and stability 4=10787
- series, convergence, coordinates of unperturbed motion 3=23658
- sidereal period dilatation at great eccentricity 3=21221
- solar system, loss of long-period comets 4=20910
- spheroid attracted by sphere, translational-rotational motion 2=935
- stability of motion about two immovable centres 3=21084
- stability of triangular Lagrangian points in three-body problem 4=23829
- star in galaxy, third integral 4=17972
- stars, binary, eccentricity variation with mass 2=9084
- stars, escape during two-galaxy collision 4=23881
- stars, high vel. kinematics and galactic force 2=6978
- stellar dynamics, Jeans' theorem, isolating integrals, use 2=17286
- stellar motion in galaxies, eqns., third integral 3=18647
- stellar self-gravitation eqn. 2=11140
- synchronous orbits of sphere, ellipsoid, in orbital plane, stability 3=11494
- third integral of motion 3=11492
- third integral of motion, resonance cases and smaller divisors 4=13872
- three bodies, elliptic restricted problem, triangular points 4=14092
- three-body problem, Birkhoff–Merman method, extensions 3=18768
- three-body problem, with capture 3=1503
- three-body problem, coplanar, canonical reduction 3=5231
- three-body problem, elliptic restricted, eqns. 4=17974
- three-body problem, hyperbolic motion, perturbations 2=13092, 17227
- three-body problem, librations near triangular point 3=11743
- three-body problem, Meffroy's special case 4=21063
- three-body problem, restricted, 800 orbits calc. 4=18122
- three-body problem, restricted, elliptical, Lagrange triangle solns., stability 4=24115
- three-body problem, restricted periodic solns. 2=936-7
- three-body problem, stellar encounters in galactic field 4=13874
- three-body problem, zero velocity curves and orbits 3=11742
- Trojan planets, additional periodic orbits 2=17252
- two bodies of decreasing mass. var. of eccentricity and true anomaly for $-m/m^3$ = const. 4=10797
- two-body problem, parameter variation method applic. 3=3729
- two-body problem, variable G or mass, effects 4=17973
- two fixed centres, generalized problem 3=16437
- two fixed force-centres, matched-conic approx. 3=11493
- two stars in galaxy, appl. of third integral 3=1504
- vectorial constants, variation for small eccentricity 2=6975

Centrifuges
- bearing, electromagnetic 1=21158
- centrifugal analyser for 0.1-5μ 3=8981
- gas, mathematical centrifuge model 2=5043

Centrifuges—contd
- Lamm equation exact soln. 4=23685
- particle size classifier for 4-30μ 3=8980
- polydisperse systems, ultracentrifuge centrepiece 3=3420
- review 2=15523
- ultracentrifuge, flotation equil. 3=6932
- ultracentrifuge, mag. supported, for mol. wt. meas. 3=8942
- ultracentrifuge, magnetically suspended equilibrium 1=10289
- ultracentrifuge, zonal, for particle separation 3=7077

Ceramics
- aluminosilicate, aluminooxide, elasticity, strength, meas. 2=18975
- capillary flow in, transient 2-phase 1=6848
- ceramic–metal surfaces, bonds, rel. to elec. props. 4=10594
- cermets based on UO_2 0=6533
- conference, Pennsylvania (1962) 3=8917
- crystalline, fracture mechanisms 3=23356
- defect healing under pressure 1=17548
- dielec. const. of 80 000–100 000, report 2=14615
- dielec. const. meas., with and without biassing voltage 1=19929
- dielectric materials, development, review 3=20370
- dielectric props., freq. and temp. depend. 1=3800
- dielectric properties, 1958 digest 0=2300
- dielec. props., in USA, review 2=16766
- elastic modulus meas. at high temps. 4=23088
- electric breakdown in vac. at glazed surface 4=15557
- elec. cond., effect of γ-irradiation 2=3996
- electron microscope exam. of surface 2=23945
- ferrite, with high saturation magnetization and narrow resonance absorption 3=8687
- ferroelectric, applications 3=13110
- ferroelectric, blast pressure gauge elements 4=21009
- ferroelectric, for capacitors, review 1=7687
- ferroelectric disks, poled, Poisson's ratio meas. method 4=7364
- ferroelectric, dynamic tensile strength 1=20376
- ferroelectric, high-temperature discharges 1=1141
- ferroelectric, mechanical Q and Young's modulus, stress amplitude depend. 0=18248
- ferroelectric, multiple shock-wave structures 1=11778
- ferroelectric, permittivity under d.c. bias fields 4=26112
- ferroelectric, polarization-reversal processes, statistical investig. 4=10105
- ferroelectric, with positive temp. coeff. of resistance, const.-current characteristics 3=25395
- ferroelectric, sintering preparation 2=14617
- ferroelectric, thermal conductivity, -200° to 600°C 1=12358
- fracture, insulators, electrical, thermal shock resistance 3=17675
- gas flow through porous ceramic 1=18447
- glass as dielectric standard for microwave frequency 3=13103
- glass, review 4=26731
- heat transfer behaviour at high rates 4=30779
- heat treatment, and microstruct. bi-phase equilibrium rate, diffusion 4=23524
- high strength, prodn. and developments 4=29201
- high-strength, use in vibration transducers 4=21235
- lapping device, precision, for diffusion coeff. meas. 4=17437
- lining plates, flaw detection in, acoustic method 4=16000
- magnetic, microstructure, and hysteresis 4=26293
- mechanical props. and microstructure, review 4=23084
- mechanical strength, dislocation theory 4=1921
- metal–ceramic seals, high vacuum elec. lead-ins 4=18300
- metalloceramics, mech. props., time-to-rupture, temp. depend. 0=1866
- molten, saphire dissolution, kinetics 4=18188
- neutron irrad. damage, point defect formation 4=22640
- piezoceramics, specific dielec. capacitance meas. 2=19875
- piezoelectric acoustic transducers, effect of high coupling in equiv. network 4=16180
- piezoelectric disk, coupling factor 1=6920
- piezoelectricity, effect of strong a.c. fields 2=14627
- plates, irrad., Young's modulus change, meas. method 4=20631
- polarized, intrinsic energy and electrostriction 2=21210
- polycrystalline, mech. props. rel. to microstructure 3=23357

Ceramics–contd
- porcelain, permittivity, variation with temp. 2=21219
- porcelain, permittivity, variation with temp. 3=2953
- porcelain, shock behaviour 1=11172
- porcelain, thermal diffusion of Fe_2O_3 on surface 4=30577
- porous, dielec. breakdown 0=3721
- radon leakage from, as potential health danger 4=6298
- reflectivity, rel. to irradiation 3=8585
- resistance to thermal shock 1=3997
- rutile ceramics, ageing, conductivity changes 1=17637
- rutile ceramics, ageing, defect concentration changes 1=17638
- rutile ceramics, dielec. props., current and temp. depend. 1=1138
- single phase, excitation processes and thermal cond. at high temp. 0=11590
- sintering, rel. to plastic deformation 4=7380
- steatite, permittivity, variation with temp. 2=21219
- steatite, permittivity, variation with temp. 3=2953
- strength, tranverse, meas. method at high temps. 4=23089
- structure and mechanical props., review 4=23084
- structure, micro, geometry 4=23510
- tensile strength, diametral-compression test 4=26500
- thermal conductivity at low temps. 2=16615
- thermal expansion, fracture, insulators, electrical, shock resistance 3=17675
- thermal resistance of pressed powders 3=25217
- titanate ceramic, electrical ageing study 1=12659
- two-phase systems, residual stresses 4=23099
- Varikond, polarization curves 2=18778
- volume and mechanical strength, rel. to irradiation and annealing 4=10374
- X-ray diffraction examination, review 4=13623
- Ag diffusion into, rutile and perovskite structures 1=17564
- Al_2SiO_5 system at high temp. and press. 4=29002
- $(Ba-Sr)TiO_3$, permittivity and field factor 2=670
- $(Ba,Sr)TiO_3$ sinterceramic capacitors for synchrocyclotron modulation 1=1947
- $Ba_{0.72}Sr_{0.28}TiO_3$, rejuvenation effects 3=8561
- $(Ba_x,Sr_{1-x})TiO_3$, dielec. and electrocaloric props. 3=2957
- $BaTiO_3$, dielec. piezoelectric props. 2=16790
- $BaTiO_3$, disadvantages 1=17854
- $BaTiO_3$, effect of neutron irrad. on ferroelec. 3=896
- $BaTiO_3$, ferroelec. props. 2=14626
- $BaTiO_3$, ferroelec. props., neutron irrad. effects 2=10559
- $BaTiO_3$, for fine movement control 3=7418
- $BaTiO_3$, fracture, electrostrictively generated and moderated 4=28938
- $BaTiO_3$, permittivity, loss tangent at high pressures 2=669
- $BaTiO_3$, resistance, elec., temp. var., anomalous, intergranular barrier model 3=25399
- $BaTiO_3-SrTiO_3$, harmonic generator 2=12563
- $(Na, K)NbO_3$ ceramics, spontaneous polarization 3=892
- Na_xWO_3, neutron diffr. study 0=6361
- $PbTiO_3$, piezoelec. and ferroelec. props. 1=17854
- Pb titanate zirconate ceramics, dielec, props. at v.l.f. 0=16021
- Pb titanate–Pb zirconate, electro-acoustic sensitivity 2=17548
- Pb titanate zirconate, piezoelectric and dielec. props. 4–77°K 2=8474
- $PbTi_xZr_{1-x}O_3$, p-type elec. conductivity 3=25400
- Pb zirconate titanate ferroelectric resonators, small-signal parameters rel. to polarization state 4=28629
- $Pb(Zr_{0.95}Ti_{0.05})O_3$, primary pyroelec. effect 4=22785
- Pb–Ba and Pb–Sr zirconate–titanate, piezoelectric finite strain response 4=7054
- $PbZrO_3$, modified with Ti^{4+} and Sn^{4+}, ferro- and antiferroelectric phases, stability, var. with press., elec. field, temp., composition 4=26123
- $PbZrO_3$, piezoelec. and ferroelec. props. 1=17854
- $SrTiO_3$, dielec. and electrocaloric props. 3=2957
- Ta_2O_5, dielec. const. and dissipation factor 4=12964
- Ti, conductivity, electrical, var. during ageing 3=20380
- $ZnO-TiO_2-NiO$, elec. resist., temp. coefft. 3=13117
- $Zr_{0.84}Ca_{0.16}O_{1.84}$, grain boundary conductivity 4=7037

Cerium
- allotropy at high press. 4=26560
- $\alpha \rightleftharpoons \gamma$ phase transform, effect of Pu, Th, Sc and rare earth additions 2=23878
- antiferromagnetism by s-f-exchange model 2=4214
- atomic g_J factor 1=19585

Cerium—contd
- crystal structure, 4.2-300°K, by neutron diffr., rel. to magnetic and spec. ht. anomalies 1=9135
- diffusion, anomalous, in Ag and Pb 3=13005
- diffusion and microdistrib. in Fe 3=20229
- diffusion in molten U 0=3515
- elastic props. and phase transfer. at high pressures 1=3957, 10205
- elec. resistance, effect of pressure 1=14356
- elec. resistance, effect of pressure 1=17604
- elect. resistance, 10°–300°K, up to 10 000 kg cm^{-3} 2=14490
- elec. resistance, 10°-300°K up to 10 000 kg cm^{-2} 3=6558
- electronic structure by positron annihilation 4=17413
- electronic transformations, spin effects 1=7551
- electronic transitions of Ce^{3+} in CdF_2 0=13698
- f-electron, virtual bound state model 3=2756
- Hall effect in phase transition of first kind 2=18640
- ionization potential, study on W surface 1=18758
- ions, Ce^{3+}, in LaMg nitrate, spin–lattice and spin–spin relaxation 1=20204
- ions, Ce^{3+}, paramag. relax. in $CeCl_3.7H_2O$ 4=26379
- ions, Ce^{3+}, spin–lattice and cross-relax. in $CeCl_3.7H_2O$ 4=26380
- ions, positive, resonance charge exchange meas. 2=17789
- ions in water, vol. mag. susceptibility meas. 4=8888
- luminescence activation, in alkaline earth borates 2=6595
- magnetic susceptibility, expt. and theory, rel. to electronic structure 1=7734
- mag. susceptibility and specific heat, cubic Ce, calc. 0=11806
- I and II, crit. end point evidence 4=17757
- phase diagram, 20-350°C, up to 80 x 10^3 kg/cm^2 3=16014
- phase transformation 1=15124
- phase transformation, $\alpha-\alpha'$, diffusion on increasing temp. and press. 4=4503
- phase transformations 1=2518
- phase transformations, dilatometric and X-ray study 2=17041
- phase transition, existence of critical point, study to 20 000 atm and 575°K 1=14938
- plasma, in Q machine, ion loss effect on diffusion 4=14733
- polymorphic transformation, under pressure 1=10226
- rolling texture and stacking-fault energy 4=13656
- slow neutron inelastic magnetic scattering 1=6345
- specific heat meas., 0.4°-4°K, in phase mixture 4=12642
- spectra of ions in alkaline earth fluorides 3=25452
- spin–spin interaction by virtual phonon exchange 2=18889, 21293
- thermal expansion low temp. anomalies and f electron states 4=15433
- vapour diffusing through Ni. surface ionization 4=30576
- $Ce^{141,144}$, fallout, stratospheric, bomb-produced 4=2214
- Ce^{3+} in $CaWO_4$, e.p.r. 4=23058
- Ce^{3+} in crystals, mag. and spectroscopic theoretical investigation 2=21295
- Ce^{3+}, elec. quadrupole interact., rel. to anti-shielding 4=1215
- Ce^{3+} e.s.r. in $CaWO_4$ 1=14792
- Ce^{3+} e.s.r. in $SrTiO_3$ 4=26417
- Ce^{+++}, ionic distrib. coefficient in CaF_2 1=14990

Cerium compounds
- Ce aluminates, high permittivity 2=21207
- Ce aluminates, high permittivity 3=6617
- Ce double nitrate, intermediate-state reorientation of nuclei 3=25172
- Ce ethyl sulphate, Ce^{3+} elec. quadrupole interactions 1=6426
- Ce ethylsulphate, specific heat, rel. to spin–lattice coupling 4=6739
- Ce ethyl sulphate, thermal and mag props., 0.02–1°K 0=10102
- Ce hydride, elec. conductivity rel. to composition 4=20328
- Ce magnesium nitrate, energy diff. between 1st excited and ground states 4=12641
- cerium magnesium nitrate, low-temp. spin–lattice relaxation 1=14808
- Ce mag. nitrate, use in low temp. susceptibility thermometer 4=24465
- Ce magnesium nitrate, use in temp. meas. 4=14430
- Ce nitrate, aq. soln., u.s. velocity anomaly 1=15871
- Ce oxide as polishing medium 1=9160
- Ce phosphate glasses, Faraday effect at 1.8 and 4.2°K 0=2933

Cerium compounds—contd
ceric sulphate in H_2SO_4, response to 14 MeV neutrons 4=25118
sulphate, Mn-activated, luminescence 1=6222
ceric sulphate soln., chemical change rel. to α-irradiation 2=4555
Ce sulphate solns., dosimetry of electron beams and X-rays 4=9017
Ce sulphides, thermoelec. props., 4-1300°K 2=8451
Ce tetrakis-dibenzoylmethane, crystal structure 0=3248
Ce—Ag, magnetic susceptibility, 90°-50°K 4=10244
Ce—Al, prep., structure, mag. props., —200° to +200°C 4=13116
Ce–Al–Th alloy as CO_2 getter at high temp. 2=5087
$CeAl_2$, mag. moment and Curie pt. 3=991
Ce—Au, magnetic susceptibility, 90°-50°K 4=10244
CeB_6, optical constants and energy spectra 3=20437
CeC_2, neutron diffract. & paramag. scatt. analyses 3=1328
CeC_2, structure 2=4419
Ce_2C_3, neutron diffract. & paramag. scatt. analyses 3=1328
Ce_2C_3, structure 2=4420
Ce—Cd, prep., structure, mag. props., —200° to +200°C 4=13115
$CeCl_3$, anhydrous, mag. suscept. meas. 4=7217
$CeCl_3.7H_2O$, e.s.r. susceptibility meas., 2 Kramers doublets 4=20587
$CeCl_3.7H_2O$, paramag. relax., dispersion-absorption meas. 4=26379
$CeCl_3.7H_2O$, paramagnetic relaxation, liquid He temps. 3=8718
$CeCl_3$, $7H_2O$, spin—lattice and cross-relax. of Ce^{3+} 4=26380
$CeCl_3$–$PrCl_3$ mixed crystals, fluorescence 3=15706
$Ce_{24}Co_{11}$, crystal structure 3=8844
Ce—Cu, magnetic susceptibility, 90°-50°K 4=10244
Ce—Cu phase diagram, by differential thermal analysis and metallography 4=30800
Ce–Eu alloys, electronic structure, mag. props. and lattice structure 3=15757
CeF_3, growth of highly-perfect single crystals for masers 3=23397
CeF_3: Nd^{3+}, lattice energy transfer and stimulated emission 4=30093
CeF_3—ZnS evap. films, refractive indices 4=7114
CeF_4, solid, F^{19} n.m.r. absorpt. line, mag. shielding transition 4=23068
Ce—Ga, prep., structure, mag. props., —200° to +200°C 4=13116
Ce_5Ge_3, crystal structure 3=8842
Ce—Hg, prep., structure, mag. props., —200° to +200°C 4=13115
CeI_3, molten, elec. cond. of Ce 3=21404
Ce—In, prep., structure, mag. props., —200° to +200°C 4=13116
Ce : $LaAl_2$, crystalline Stark splitting 3=20071
$(Ce,La)_2Mg_3(NO_3)_{12}.24H_2O$, dynamic polarization of protons 1=10185
$(Ce, La)_2Mg_3(NO_3)_{12}.24H_2O$, protons, polariz., 170 times increase in 3700 Oe at 1.6°K 3=20065
$CeMg_9$(approx.), crystal struct., atomic, unusual 4=23430
CeMg nitrate, Ce^{3+} spin–lattice relaxation 1=6423
Ce Mg nitrate, crystalline field splittings 4=26381
CeMg nitrate, far i.r. spectrum meas. 4=4254
CeMg nitrate, heat transfer below 1°K 0=7038
CeMg nitrate, heat transfer from quartz at 1°K 0=1067
CeMg nitrate, mag. susceptibility, 4.2-300°K, crystal field parameters 1=9015
Ce Mg nitrate, ordered spin T → O°K, int. mag. field calc. 4=28317
Ce—Mg double nitrate crystals, proton polarization 4=13340
CeMg nitrate, pseudoquadrupole coupling of Pm isotopes 3=12906
CeMg nitrate, rotated at 1.3°K, nuc. polarization 3=14432
CeMg nitrate, specific heat, 1.5-10°K 0=20750
CeMg nitrate, spin–lattice relaxation 2=14836
CeMg nitrate, spin—lattice relaxation, complex mag. susceptibility 1=12566
$Ce_2Mg_3(NO_3)_{12}$, crystal field splittings 3=8333
$Ce_2Mg_3(NO_3)_{12}.24H_2O$, crystal structure 4=7611
Ce_2Ni_7, crystal structure 0=4638
CeO_2. mixture with ZrO_2, phase change temps. 4=23296

Cerium compounds —contd
CeO_2, resistivity, thermoelec. power, composition 0=606
CeO_2, thermal expansion, X-ray diffr. meas. 3=8370
CeO, thin films, dielectric constant 3=8555
CeO_2, Ca-doped, electrolytic conductivity 3=17870
CeO_2–CeF_3, optical films, evaporated, refractive index 3=23035
CeO_2 and SiO, evaporated, as optical film, protective, for mirrors 3=11927
CeO_2 and SiO, evaporated, for optical films, anti-reflection 3=11928
$Ce_2O_3.2.67P_2O_5$, optical rot.—mag. susceptibility comparison 4=22851
$CeRu_2$—$GdRu_2$(7.3%), ferromagnetism and incipient supercond., 1.3-20°K 4=13172
$CeRu_2$–$GdRu_2$ solid solns., supercond. transition rel. to Curie point 0=16956
Ce–S, polaron band model 1=17479
CeS, Ce_2S_3, thermal exp., 20-1020°C, Debye temp. 4=22508
CeS, elec. and mag. props. and thermal expansion 4=6952
CeS, thermal expansion, X-ray determ. 4=30523
Ce_2S_3, conductivity, electrical, 20-1000°C 4=4161
Ce_2S_3, elec. and mag. props. and thermal expansion 4=6952
Ce_2S_3, γ-phase, optical parameters analysis 4=13028
Ce_2S_3, thermoelectricity, 20-1000°C 4=4161
Ce_3S_4, elec. and mag. props. and thermal expansion 4=6952
$Ce_{3-x}S_4$, conduction band structure 3=10628
$Ce_{3-x}S_4$, x = 0-0.3, semimetallic props. analysis 4=10047
$Ce_{2-x}S_4$, x > 0.3, electron transport rel. to temp. 4=10048
$Ce(SO_4)_2$, aq. soln., radiation-induced reduction, kinetics 1=1490
$Ce(SO_4)_2$ solns., reduction γ-ray dosimetry 0=5453-4
CeT, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
CeT_2, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
Ce_3T, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
CeT_5, where T=Mn, Fe, Co or Ni; preparation and structure 1=7877
Ce–Th, mag. susceptibility, theory 0=21024
Ce—Tl, prep., structure, mag. props., —200° to +200°C 4=13116
Ce–Zn, intermetallic phases, effusion balance investigation 2=6822
Ce—Zn, prep., structure, mag. props., —200° to +200°C 4=13115
CeZn nitrate, Co^{60} nuclear orientation in, effect of mag. interaction 1=3586
CeZn nitrate, far i.r. spectrum meas. 4=4254
$Ce_2Zn_3(NO_3)_{12}$. $24H_2O$, mag. interaction between Co^{2+} and Ce^{3+} ions 1=6260

Change of state
See Phase transformations.

Charge

differential thermal, scanning calorimeter 4=26773
by e.s.r. 1=13190
electron-probe microanalyser, quantitative 2=10999
electrophoresis techniques 3=16171
flame photometric absorpt., burner design 2=21601

Chemical analysis—contd
fluorescent intensity prediction and interelement effects 1=10108
fluorometer, double-beam 3=21013
furnace for thermal anal. of Be 0=4765
gas analyser for ortho-para H_2 and D_2 2=4578
gas content in gas mixture at several atmospheres 4=26769
gas detector using thermal conductivity method 1=6971
gas determination in metals, review 3=11370
gas optico-acoustic analyser, sensitivity increase 0=4752
gas, by optico-acoustic effect, negative, chamber 3=11369
gas sampling pump, transistor-driven 3=21011
gas and vapour mixtures, standard samples 1=20783
gaseous mixture separation by vapour current 1=20781
gases, 5-10 mm Hg, using thermal conductivity 4=17875
gases and liqs., by optical absorpt., sensitivity 2=11004-5
gases in metals, gas chromatography 2=21603
gases, optico-acoustic analyser, gas characteristics 0=16398
gases, optico-acoustic analyser, single-beam 0=16399
gases, quantitative analysis by omegatron 1=7924
gases and vapours, ionization detector 0=8340
gauge optimization H_2O content by n scatt., for soils and concretes, 4=29243
h.f. titrations, explanation of curve types 0=10377
heavy elements (Pb, Cu) in sand, γ-ray absorption method 0=12121
i.r., water—heavy water mixtures 3=23561
isotopes, by β-ray interaction 4=25063
katharometers, use in isotopic analysis 0=15668
large molecules in solution, separation by capillary and porous flow 3=113
luminescence methods, conference Minsk (1959) 1=2450
luminescence microscopy 3=24012
microanalysis by secondary ionic emission 3=3422
minerals, by mag. props. study 0=13729
mixtures, of optically active substances 2=6898
moisture content, by neutron probe 3=7076
molecular composn. of vapours by velocity analysis 3=15399
by n.m.r. 1=10199
by n.m.r. at high resolution 1=13193
by neutrons, H_2O in soil, calibration curve and configuration 4=7807
oxide monocrystals, stoichiometric deviations, determ. 4=29244
oximeter, cuvette, blood, transmission, allowing for light scattering 3=13943
oxygen content of blood, Paul type oximeter 1=21113
particulate air contaminants, activation analysis 3=9019
photometry, flame, absorptive 4=2172
quantitative, by isotope dilution methods, accuracy 2=4576
quartz determination in mine dust, i.r. method 0=3337
rel. to dielec. const., loss and conductivity meas. 2=17767
semiconducting materials, Si, Ge, Ga, In 0=2065
steel, using magnetization intensity 1=15212
surface, by α-ray backscattering 3=8991
thermal, comprehensive, apparatus 3=8988
thermal conductivity detectors, for methane and propane in H_2 and N_2 0=16402
thermal conductivity gas analyser 0=8341
thermogravimetric, displacement detector for recording thermobalance 0=14574
trace components exam. by i.r., effect of water 4=8438
volumetric det. of CO_2 in air, results in light and darkness 4=4755-6
Zircaloy-2, H content from Hall coeff. 2=14501
Zircaloy-2 and 3, second phase 3=5131
Al 0=2065
Al, electron-probe microanalysis 3=11366
Au, zone-refined, activation analysis 3=3345
Cu, determination in Al 3=11278
D_2O in heavy water, float method theory 2=19183
H detection in gas mixtures 0=21299
HF in gaseous mixtures, i.r. absorptiometer 0=4754
H_2O—D_2O, by gas resistance 4=24450
KCl and KBr, zone refining 0=8167

Chemical analysis — contd
Na cations in atmospheric particles 3=1408
O content, rapidly changing, in gas mixtures 0=4755
O_2 detector, by chemisorption 4=10683
O_2 gas, by thermal cond. var. in mag. field 4=29245
Pt—C system conc., e. p. r., catalyst in H—D isotopic exchange reaction 4=30902
SF_6, in air, by electron attachment 1=12684
SO_2 in air, continuous estimation, extraction, gas-liquid impinger 1=20782
Sn–Pb–Sb alloys 2=17035-6
Te, high-purity, prod. and analysis 3=18684
U-concentration meas. by fission tracks 3=21020
U fluorimeter 1=11642
U, in fuel elements, by γ-ray absorption 4=6442
U in NaF beads, photoluminescence meas. 2=17107
W, determination in W—Fe alloy 3=11278
adsorption

etching, Fe—Ni alloys, dislocation exposure 1=2521
ethane, ethyl, decomposition 4=26752
ethanol adsorbed on Al_2O_3 surfaces; catalytic action 3=3362
ethyl-d_3 chem. activated radicals, decomposition 3=11347
ethyl iodide, pyrolysis 3=6915
ethyl lithium with benzyl chloride, enrichment of Li isotopes 1=9167
ethyl-d_1 radicals, decomposition 4=10639
ethyl radicals with I atoms, recombination and disproportionation 3=8972
ethylene glycol synthesis in chemonuclear reactions 1=11056
ethylene oxide, first addition to phenol, base catalysis mechanism 3=20997
explosive crystal, slow surface decomposition 2=19144
explosives, thermal decomposition, boiling point lowering 2=2450
flame propagation, with 0–3rd order reactions 1=4095
flame theory from unimolecular reactions 0=210-11
and flow, gases, shock waves 4=16138
formation of gaseous species at flash-heated solid surfaces, absorption spectra 2=17088
free-radical formation on flash-heated grids 0=17759
gas Mach stems 4=24306
gas mixtures, effect on thermal conductivity 0=6982
gas-phase, coherent light generation 4=19282
gas-phase, nonequilibrium effects, composition depend. 4=23632
gas phase, study by mass spectrometer 3=21441
gases, absorption and evolution, automatic recording apparatus 1=1468
gases, Boltzmann eqn. 2=4524
gases, d.c. electric discharge effects 4=18758
gases, heat transfer estimation 2=2763
gases, mass separation due to temp. gradients 1=9416
gases, rel. to intermolecular energy transfer 2=10963
graphite, Kish crystals, oxidation effects microscopy 3=16031
GpIII acceptors with oxygen, in Si crystals 0=15941
haemoglobin—gas reactions 3=3383
halogen molec. beams with alkali metal atoms 4=28288
halomethanes and Na, activation energy and number of CH and CF bonds 3=18440
heat and mass transfer for gas flow 2=15129
heterogeneous, mass spectrometer studies 0=14099-100
n-hexane and air in flames, activation energy calc. 4=29221
high temp. in furnace crucible, improving gas-melt contact 4=23660
hot-atoms, kinetics, average collisional energy loss evaluation 4=26735
hydrazine synthesis in chemonuclear reactions 1=11056
hydrogen bond formation in solution 0=3535
hydrogen with iodine, rates 2=10966
ignition, transition to explosion, vessel size 4=26754
inert gases, with N_2 and CO, high-pressure 3=3387

Chemical reactions—contd
inert gases, recombination rate constants, three-body 4=17852
infra-red spectrum emitted, continuous recorder 2=19768
initiated by β-decay of tritium 0=14132
interacting reactions relaxation by ultrasonic absorption in fluids 4=26732
ion–molecule, mass spectrometer adaptation 2=3101
ion—molecule, mass spectr. study 3=16156
ion–molecule, in methane and ethane 4=11538
ion–molecule reactions of 5th-group element hydrides 0=19627
ion—molecule reactions, H transfer, cross-sections, energy depend. 3=23540
ion–molecule reactions, ionic k. e. distrib. 4=27473
isomerization and dimerization rel. to centrifugal sedimentation 3=3388-9
liquid pumping apparatus for studying fast reactions 1=9376
liquids, u.s. absorpt. obs. of equilib. 4=25745
lomonsovite—murmanite group minerals, transitions 3=18325
luminescence, for wind study, night, upper atmosphere. 3=25918
in magnetohydrodynamic shocks 1=16521
mass-spectrometer study 3=21902
mass spectrometer used to test for intermediates 1=7918
metal—composite gas systems, reactive diffusion 1=14310
metal—gas systems, binary, reactive diffusion, theory 1=14292
metal and semicond. surface catalytic in gaseous media, quantitative investigation 2=21132
metal–water, explosive, in nuclear reactors 2=4540
metals and chemisorbed gases 1=5110
methane-oxygen, in shock tube, vac. u.v. emission 2=12963
methanol adsorbed on Al_2O_3 surfaces; catalytic action 3=3362
methyl with isopropyl radicals 1=20757
methyl radicals, detection in electric discharge 1=1477
methyl radicals with ethylene, study 0=746
methyl radicals with propylene, gaseous reaction 2=15136
in molecular beam scattering, review 4=25786
molecular complex form., organic, by electron transfer 3=21003
monochloroethyl and trichloromethyl radicals, recombination and disproportionation 3=8974
μ^+-meson involvement effects 3=15416
(n,γ) activated I^{128} reaction with CH_4 1=10298
negative-ion-molecule reactions 0=4707
neopentane pyrolysis, catalytic transfer by HCl 4=23633
neopentyl chloride, pyrolysis mechanicm 4=2148
nitrates, ionic, in aq. solns., Raman spectral study 4=2687
nitriles as proton acceptors in H-bond formation 2=17087
nitrogen fixation in chemonuclear reactions 1=11056
p-nitrophenol with triethylamine, in aprotic solvents, three types of complex form. 4=29209
one-electron transfer reactions, proton magnetic resonance line widths 4=4690
order det. by absorption spectroscopy 3=6908
organic acid—base in aprotic solvent 4=29209
between organic mols., fluoresc., in soln. 3=7215
orthopositronium with oxygen 0=3292
oxidation-reduction in solutions, electron-transfer processes 0=19171
oxidation studies, continuous reading balance 0=4984
perturbation of molecular distribution functions 0=4708
phenol, first addition of ethylene oxide, base catalysis mechanism 3=20997
phthalimide in alkaline solns., from spectrum, u.v. 4=9759
polar; electronic wave functions and transition complex energies rel. to substituent 2=21581
polar soln. mixtures, from dielectric const. and refractive index 4=10637
polyelectrolyte–simple-electrolyte interaction parameter 1=20748
polyvinyl alcohol solutions and Cu^{++} salts, macromolecules or gel formation 3=16163
positron lifetimes in aqueous solns. 3=8955
potential-energy surfaces, local approx. by surfaces permitting separation of variables 4=28158
process involving competing mechanisms, apparent activation energy and frequency factor 0=1951

Chemical reactions—contd
- sec-propyl ions, hydride and proton transfer 4=13712
- protein —molecule reactions 3=3383
- pyrolysis of cyclopropane and cyclobutane, isotope effects 3=8961
- pyrrolidine in CCl_4, H-bonding self-association 2=10961
- quantum mech. theory of absolute reaction rates 0=12093
- $ROH + OH^- \rightarrow RO^- + H_2O$ in alcohols 4=13725
- radiolysis of organic systems, inhibition 2=4558, 8927
- rapid, modification of continuous flow apparatus for meas. 4=26737
- rare earth tri to divalent ion conversion in alkaline earth fluorides 4=29213
- rate theory, physico-mathematical foundations 3=3382
- reactive diffusion, localized character of reaction, theory 1=14290
- reactive diffusion in solids, localized character of reaction 1=984
- reactive diffusion, structure of surface scale 1=14291
- reactivity, resonance theory, correlation with LCAO-MO method 2=6198
- recombination H and OH 2=2446
- reduction of CuO to Cu in H_2, optical evidence 2=6878
- re-entering rocket, shock layer, electron density 2=2755
- riboflavin with amino-acids 3=8954
- ruthenocene-Ru^{103} synthesis by ferrocene + U fission 1=20736
- salts, on melting, elec. cond. meas. 2=9464
- semiconductor formation, oxidation and reduction, effect of equilibrium conditions 3=25824
- semiconductors, reactivity rel. to chemical and physical imperfections 1=3736
- silica and silicates, etching by HF 0=16376
- solid state, survey 2=14346
- solid state, "topotaxy" 0=6336-7
- solids, reactivity 1=2386
- solutions rel. to dielec. const. of solvent 2=17440, 19550
- sonochemical reaction yields 0=3323
- sonochemical, for ultrasonic cavitation meas. 4=8351
- spontaneous and adiabatic, entropy production 0=744
- stationary states and steady-rate processes 0=3691-4, 14907
- statistical method for mech. and rate invest. 3=6423
- sulphitation of Cu—Zn alloys, mechanism 1=1439
- sulphur and oxygen in h.f. discharge 2=23958
- at surfaces between dissimilar solid materials, rel. to bonds 4=10594
- switching circuit, equivalent to biochemical reactions system 1=20720
- systems of coupled bimolecular reactions 0=6410
- TNT, liquid, detonation pressure 0=6399
- thalidomide in alkaline solns., from spectrum, u.v. 4=9759
- thermo-balance for chemical reactions 2=853
- thermodynamics 0=3694
- thermodynamics of single reaction 0=7016
- toluene + chlorobenzene, weak dipolar, in soln. 2=17455
- transition elements, electron transfer in aqueous soln. 3=8943
- transport, use for growing chalcogenide monocrystals 1=20443
- tunnel effect on double potential barrier 2=17082
- unimolecular decomposition of activated ethyl-d radicals 3=16154
- unimolecular decomposition in nonequilibrium systems 3=8965
- unimolecular, oscillator models 4=26733
- unimolecular, statistical complexion calc., anharmonicity effects 4=13707
- in upper atmosphere, 9 atomic reactions 1=1525
- upper atmosphere, by rocket exhaust radiation meas. 2=8982
- variational principles for chemical equilibrium 0=10690
- whisker growth by chem. reactions 1=6501
- $X^* + Y \rightarrow XY^+ + e$ for inert gas atoms, lifetimes 4=13717
- zeroeth-order, and propagation of flames 0=8304
- AgBr, with Br_2 vapour, study using defect electron cond. 3=6912
- AgCl, with Cl_2 vapour, study using defect electron cond. 3=6912
- Ag cyanamide explosive, slow surface decomposition 2=19144
- Ag_2CN_2, thermal and fission-fragment decomposition 2=854
- Ag halides, precipitation reactions in crystals 1=2556

Chemical reactions—contd
- $Ag-H_2S$ system, growth forms of reaction product and reaction rate 0=16257
- Al with MgF_2, on heating in vacuo, by reflectance charge 3=9601
- Al with NaOH or KOH, electron emission 1=16376
- Al–O reaction, light source 0=8790
- $BF_3(g) + B_2O_3(l) = (BOF)_3(g)$ 4=2149
- $B_{20}H_{16}$ preparation 4=7748
- $B_2O_3 + BF_3$ 2=4536
- $(BOF)_3(g) = 3BOF(g)$ 4=2149
- $B_2O_3(s) + H_2O(g)$, mass spectrometer study 0=14099
- BaO solid $+H_2O$ vapour, mass-spectrometric study 4=23647
- BaO + W, >800°C 2=17074
- Br, recombination rate constants, three-body 4=17852
- Br_2 thermal dissociation 2=20875
- Br_2 + Cs crossed beams, CsBr ang. distrib. 4=28286
- C^{11} recoil reactions in C_3 hydrocarbons 3=11359
- $C + CCl \rightarrow C_2^* + Cl$, energy distribution 3=11346
- $C + CH \rightarrow C_2^* + H$, energy distribution 3=11346
- CD_3, abstraction of primary, secondary and tertiary H atoms 3=3384
- CD_4, unimolecular, statistical complexion calc. 4=13707
- CF_3 radicals with perfluoroacetone 2=6880
- $CF_3 + CH_2D_2$, high temp. kinetic isotope effect 2=4532
- CH_4, negative glow, decomposition, at low temp. 1=2952
- $C_3H_3^+$ ion formation 4=13714
- CH_3 and CF_3, hydrogen abstraction reactions 1=20721
- $CH_3 + HI \rightarrow CH_4 + I$, kinetic consts. 2=12980
- $CH_3 + I_2 \rightarrow CH_3I + I$, kinetic consts. 2=12980
- C_2H_4 with N, rate of reaction 1=1471
- $C_6H_6N_2^+$ and $C_{12}H_{11}^+$ ion–molecule complex formation 2=8913
- CO—O atom 3=5159
- CO—O_2 photolysis in solutions, 77°K 4=13734
- CO_2 dissociation in elec. discharge 0=6404
- $CO_2 + D_2$, transient species during catalytic reaction 1=20733
- CS^{2+} with CS_2, H_2O and aromatic cpds., products obs. 2=8912
- CaF_2, detection of hydrolysis in solid by e.s.r. 1=11478
- $Cd-Cd^*SO_4$, isotope exchange, with Cd^{115} tracer 2=21589
- CdS, chemisorption of C, elec. cond., contact potential obs. 4=29194
- CdSe prep. by reaction of components 3=25823
- Cr—S—N system, reactive diffusion 1=14311
- $CrO_3 + Cr_2O_3$ in solid state, study by i. r. spectroscopy 4=10169
- Cs, in cathodes, effect on thermionic emission 0=10934
- Cu, oxidation and reduction up to 600°C, rel. to elec. cond. and chemoemission 3=2012
- Cu, oxidation, surface, dislocations, effect 3=16130
- Cu^{++} salt and polyvinyl alcohol solutions, macromolecules or gel formation 3=16153
- CuI, reduction by H, Cu whisker growth mechanism 0=1888
- Cu—Sb, in Ge, at high temp. 1=987
- $D + Cl_2 \rightarrow DCl + Cl$, rel. to i. r. chemiluminescence 4=7747
- D atoms in H_2, CH_4, and C_2H_6, and moderation probabilities 4=23673
- D atoms in ^2P state, with N_2, meas. 4=13724
- F, atomic, gaseous, substitution in CF_4 3=21005
- Fe_3O_4 formation, thermodynamic prop. changes 4=26742
- GaP–GaAs solid soln., prep. from gas phase 2=10921
- Ge and I_2, etching, mechanism and patterns 3=13601
- Ge, surface reactions with O and I 3=13555
- Ge, surface stabilization by ethylation 2=8335-7
- in GeTe vaporization, partial pressures, entropy changes 4=20828
- H atom abstraction by cyanide ion-radicals 0=6407
- H atom-formaldehyde, isotope effects 0=14114
- H atom recombination on Al surfaces 4=13721
- H, atomic, recombination, on Pt surface 3=20987
- H atoms with 1-C^{13}-propane 3=20989
- H atoms in D_2, CD_4 and C_2D_6, and moderation probabilities 4=23673
- H atoms in ^2P state, with N_2, meas. 4=13724
- H atoms, with N_2H_4, NH_3 and N_2O 2=23952
- H atoms with NO_2 and O_3 2=23953
- $H + Cl_2 \rightarrow HCl + Cl$, energy distribution model 3=13593
- H, D + P (white vapour) + O (traces), HPO, DPO spectra 4=15346
- $H \rightarrow H_2$, e.s.r. study 2=16494

Chemical reactions—contd
H, hot atom, with propane, butane, butene -1, kinetic theory analysis 4=30395
H with isobutane, displacement steric effect 4=26753
H + NOCl, chemiluminescence 1=11792
H–O, detonation study rel. to tube diameter 2=6884
$H + O_2$, i. r. emission 0=19221
$H + O_2 + M = HO_2 + M$, third-body efficiency 0=21272
H—polystyrene 1=17340
H, in upper atmosphere, and OH, HO_2, H_2, NO_2, O_3, review 4=13718
HD^+—He, HD^+—Ne, Ar^+—HD, and Kr^+—HD reactions, isotope effects, intramolecular 4=29205
$H_2^3-C_2H_6$, mechanism determination 0=745
H_2 dissociation thermal cond. 2=2762
$H_2 + GeCl_4$, rel. to Ge layer formation 3=18283
H_2 + He, ion—molecule reactions 3=11342
$2H_2 + O_2 + 2CO$, detonation, in shock tube 1=7908
$(2H_2 + O_2)$ - steam mixtures, detonation 2=4538
$H_2 + X = H + HX$ and $X_2 + H = X + HX$, (X = H, F, Cl, Br and I) 4=26738
$H_2^+ + He \rightarrow HeH^+ + He$ 2=15881
H_2^+, isotopic, with isotopic H_2, meas. 3=2677
$2HI \rightleftharpoons H_2 + I_2$, thermal conductivity 4=24270
HO_2 free radical prodn. 2=15131
H_2O synthesis, radiation induced, energy transfer from CO_2 4=23678
H_2O_2—NaOCl solns., luminescence, and excited O_2 4=24223
H_2O_3 formation, by free-radical reaction on cold surfaces 4=10640
He, recombination rate constants, three-body 4=17852
I^{128} activated ion reactions with gaseous molecules 2=4564
I atom complex formation 1=20735
I, recombination rate constants, three-body 4=17852
I_2, gaseous, in liquid Na 3=21007
I_2 and Ge, etching, mechanism and patterns 3=13601
I_2, with mixtures of CH_4, methanol, H_2O, A, Kr, excited ion and atom processes, mass spectrometric study 0=16400
Ir hexachlor complexes, crystalline, Szilard–Chalmers reaction, Ir^{192} recoil species 0=12109
K soln. in liquid NH_3, decomposition by e.s.r. 2=10971
K, in CH_3I and C_2H_5I, reactive scattering of K beam 1=12336
K with HBr, in crossed molecular beams 3=6914
$K + HBr \rightarrow H + KBr$, reactive scattering of crossed molecular beams 1=6064
$K + HBr \rightarrow KBr + H$, reaction cross-sections 0=6409
KCl crystals, photo- and thermochemical reactions 1=8916
KI, decomposition by u.s. waves 3=16162
K-Li-NO_3 melts, Cd—chlorocomplex formation 4=2143
LiF, AlF_3 complex formation in vapour phase 0=16732
LiOH, decomposition, 500-600°K 0=14100
$Li_2O(s) + H_2O(g)$, mass spectrometer study 0=14100
MgF_2 with Al, on heating in vacuo, by reflectance charge 3=9601
MgO crystals, interaction with various gases at high temp., etch patterns 1=20661
MgO, sorption of O_2 on n, γ irrad., e.s.r. obs. 4=23600
$MnCO_3$, dissociation, rel. to mag. props. 1=14677
MnO, with CO_2, dissociation, rel. to mag. props. 1=14677
Mo, reactive diffusion in $BCl_3 + SiCl_4 + H_2$ atmos. 4=28489
Mo—N—C system, reactive diffusion 1=14310
$MoSi_2$ reduction by Be powder at 900°-1100°C 4=10638
$MoSi_2 + Be \rightarrow MoBe_{12}$, $MoBe_{22}$ and $Mo(Si_{0.9}Be_{0.1})_2$ 4=10638
N atoms with NO, formation of vibrationally excited N_2 2=17086
N atoms with O_3 1=7905
N-H radicals 3=8308
$N + N + Cs \rightarrow N_2 + Cs^+ + e^-$ 2=151
$N \rightarrow N_2$, e.s.r. study 2=16494
N—O afterglow, ionization 4=23648
$N + O \rightarrow NO^+ + e$ 4=30397
N, recombination rate constants, three-body 4=17852
N, in upper atmosphere, bimolecular, rates 4=13719
$N_2-CH_2Cl_2$ 2=4537
N_2-chlorinated hydrocarbons, light emission by product 1=20731
N_2, with dissociation products of NH_3 in discharge 2=10250
N_2 (active)–H_2S, NS radical spectrum 2=20818

Chemical reactions—contd
N_2(active)—methylene chloride, quenching by CH_2Cl_2 3=11344
$N_2^* + N_2O$ at −196°C 2=10972
NH_3 gas, ion-molecule reactions 4=2141
NH_3, with H atoms 2=23952
NH_3–HCl nucleation of NH_4Cl from the gases in air 0=12096
$NH_4 + NH_3 \rightleftharpoons NH_3 + NH_4^+$ correlation time n.m.r. study 3=13589
NH_4NO_3, decomposition, thermal, isotopic tracer study 3=20988
N_2H_4, with H atoms 2=23952
$NO + N \rightarrow N_2 + O$ in glow discharge 4=14595
$NO + O \rightarrow NO_2$ in glow discharge 4=14595
$NO + O \rightarrow NO_2 + h\nu$ at low press. 4=26744
NO + O, quantum yield, chemiluminescent standard 4=13720
NO^+ formation, in ion–molecule reactions 3=23539
NO_2 prodn. in liquid N_2 and O_2 by 14·6 MeV neutrons 3=8976
N_2O, with H atoms 2=23952
$N_2O + O^-$, mass spectrometer obs. 4=29218
N_2O thermal decomposition in shock waves 1=11617
$N_2O_4 \rightleftharpoons 2NO_2$, thermal conductivity 1=12673
$N_2O_4 \rightleftharpoons 2NO_2$, thermal conductivity of system 0=2185
NOCl with CH_3OH, bis-liganded nitrosyl as reaction intermediate 1=9168
NO_2Cl, photodecomposition 1=20756
NO_2Cl thermal decomposition in shock waves in A and O_2 2=15133
Na—H (active) flame, chemiluminescence, self absorption 4=23654
$NaBrO_3$, thermal decomposition 3=6910-11
NaCl, with H_2O, O_2 and N_2 2=4400
NaCl + KBr, in solid state 1=20614
NaCl single crystals, ductility, effect of atmospheric reaction 3=13355
NaN_3 crystals, thermal decomposition 3=13599
NbC and TaC, thermal decomposition 0=10349
Ne—H_2, ion—mol., under electron bombard. 4=4694
$Ni + Cl_2$, high temp. 4=13723
NiH desorption enthalpy of H 4=23649
Ni phosphates, substituted thermogravimetry and thermal analysis, differential 3=15686
NiS formation on Ni surface, diffusion process 3=1387
O atom recombination by Ar catalysts 3=13595
O atom recombination in inert gases 3=13597
O atoms, with halogens and H_2 0=8319
O atoms with isobutane 3=11340
$O(^1D)$ with CO, photolysis, 77°K 4=13735
O–N atomic mixtures, chemi-ionization processes 3=25820
O + N atomic mixtures, chemiluminescence 4=29217
O and N with halogenated hydrocarbons, spectroscopic study 2=12961
$O + NO_2 = NO + O_2$, via NO_3, isotope exchange 3=18436
$O \rightarrow O_2$, e.s.r. study 2=16494
$O + 20_2 \rightarrow O_3 + O_2$, rate const. 4=15836
O, recombination rate constants, three-body 4=17852
O, solid, with Cu, in microwave discharges at low temp. 0=14982
O, in upper atmosphere, bimolecular, rates 4=13719
O_2 luminescence in NaO Cl + H_2O_2 solns. 4=5195
O_2, from $O + NO_2$, spectrum, kinetic, vibr. distrib. 3=25818
$O_2^{18} + O_2^{16} \rightleftharpoons 2O^{18}O^{16}$, at ZnO surfaces, dark and u. v. irrad. 0=8303
O_3 dil. soln. in liquid N_2, photolysis in u.v. 3=3408
O_3 and ozonide production and stabilization in H_2O 4=23646
O_3 production from O_2-filled ozonizer, surface effects 4=17860
O_3, solid, with atomic H, i. r. spectra 0=12098
OH formation in $H_2/O_2/N_2$ flames 0=1519
OH ions in NaCl, neutralization by HCl gas stream at 730°C 1=12403
OH radicals with benzene in water 2=10965
P_4 + O, spectrum, PO radical 4=23638
Pb with NaOH or KOH, electron emission 1=16376
Pb, vaporized, reacting with various gases u.v. absorpt. study 2=15652
$PbBr_2$, activity coeffs., in reciprocal molten salt systems $PbBr_2$ + NaCl and $PbCl_2$ + NaBr 3=16155
S^{2-} with PO_3^-, B_2O_3, TiO_2, MoO_3, WO_3, in molten NaF and NaCl, by cryometry 3=8967
SO_2 in Ar, shock excited, thermal radiation 4=26747

Chemical reactions—contd
  ScH_2, preparation 0=21270
  Si, oxidation and reduction at 600–1000°C 2=15141
  Sn with NaOH or KOH, electron emission 1=16376
  $SnCl_4$, flames, spectra, fluted bands 3=20990
  T atoms, reaction with H_2 and D_2 0=10347
  T_2-ethylene, initiation by T decay 0=3321
  TiN, and struct. 4=22451-2
  UH_3 with aqueous acid, tracer expts. 0=14103
  W oxidation, pure and carbon-containing 1=5109
  W surface, effect of BaO beam 3=23541
  Zn with NaOH or KOH, electron emission 1=16376

  thermal expansion anomaly at 38°C 1=19725
  thermal expansion near 10° K 1=17428
  thermoelectric anomaly at 35°C 3=10897
  thermoelectric power, 4.2°-340°K 3=13140
  transition at 38°C 0=13844
  ultrasonic irradiation during arc melting, structure modification 1=6545
  vacuum distillation, Al transfer mechanism 2=12936
  vapour, interdiffusivity with Ar at high temp. 4=24266
  vapour pressure, in solid state, radioactive tracer method 0=13473
  whiskers, by vapour deposition 2=8798
  Young's modulus data, rel. to temp. 4=30788
  X-ray absorption spectrum, bond characterization 1=14617
  X-ray emission and absorpt. spectrum interpretation 4=22852

Chromium—contd
  X-ray K-absorption spectra of cubic and hexagonal Cr 4=7118
  X-ray L-spectra, meas. on film 2=12607
  X-ray lines, K, from flash tube, meas. 4=20453
  X-ray reflection intensity decrease from powder, prob. due to oxidation 4=20751
  X-ray spectrum, Kα, line measurements 1=6088
  X-ray spectrum structure at short wavelength limit 1=6217
  Cr^{52}, paramag. neutron scatt. rel. to antiferromag. props. 2=21349
  Cr^{53}, n. m. r. in $CrCl_3$, var. with temp., mag. field, and antiferromag. 4=13341
  Cr^{53} n.m.r. in pure metal 2=21832
  Cr ions, mobility in Ni–Cr under electric field 1=7596
  CrI and II oscillator strengths, by shock tube spectrosc. 4=18335
  Cr II, d^4 p config. 1=806
  Cr$^+$, e. s. r. of 3d^5 config. in ZnSe and ZnTe 4=13312
  Cr$^+$, e. s. r. in NaF 0=21076
  Cr$^+$, e.s.r. in ZnS 3=3170
  Cr^{2+} in aq. solns., producing O^{17} n.m.r. shifts 3=9481
  Cr^{2+} in CdS single crystals, e.s.r. 4=15669
  Cr^{2+}, optical absorption 3=23066
  Cr(III), spin Hamiltonian in $Co(NH_3)_6I_3$ cubic field 4=20588
  Cr^{2+} in TiO_2, external stress effects on e.s.r. 4=26435
  Cr^{3+} absorption in ruby, inversion anomalies 2=4158
  Cr^{3+} in Al_2O_3, e.s.r. absorpt. line depend on Cr conc. 4=26385
  Cr^{3+}, in Al_2O_3, transition probabilities for $d\epsilon^3\ {}^2\Gamma_3$ 0=11939
  Cr^{3+} in Al_2SiO_5(kyanite), paramagnetic resonance 4=13309
  Cr^{3+} ions in aqueous solutions, proton and deuteron relax. times 4=21160
  Cr^{3+}, atomic scattering factor, new approx. 2=19073
  Cr^{3+} chelates with acetylacetone, luminescence 1=14630
  Cr^{3+}, in corundum, cross relax. time 2=4274, 10707
  Cr^{3+} ions in corundum, spectra 2=14677
  Cr^{3+}, in corundum, spin—lattice interaction, 4-90° K 3=5037
  Cr^{3+}, in corundum, spin–lattice relaxation 0=11940
  Cr^{3+}, e.p.r. in Mg WO_4 3=15939
  Cr^{3+}, e.s.r. in Al_2O_3 and MgO, elec. shifts 3=25568
  Cr^{3+}, e.s.r. in CaO 3=3181
  Cr^{3+} e.s.r. in $LaAlO_3$, 4°-700°K 4=26386
  Cr^{3+} e.s.r. in MgO, lattice imperfection effects 4=26440
  Cr^{3+}, e.s.r. on $MgTiO_3$ at 24 and 35 kMc/s 3=15938
  Cr^{3+} e.s.r. in ruby, line splitting by external elec. field 4=26387
  Cr^{3+}, e. s. r. in ZnF_2 0=10233
  Cr^{3+} e.s.r. in $ZnWO_4$ 3=3169
  Cr^{3+} electron spin–lattice relaxation in $K_3CO(CN)_6$ at liquid He temp. 0=13878
  Cr^{3+}, line broadening of P^{31} n.m.r. absorpt. in H_3PO_4 3=13316
  Cr^{3+} line optical spectrum in Al_2O_3(ruby) 0=20978
  Cr^{3+}, mag. props. in dilute systems 0=8084
  Cr^{3+}, paramag. resonance in corundum 0=11941
  Cr^{3+}, paramagnetic resonance spectrum at low and room temp. 3=25567
  Cr^{3+} in ruby, electric shift of e.s.r. lines 4=26384
  Cr^{3+}, in ruby, optical excitation processes 2=10586
  Cr^{3+}, in ruby, spin-lattice relax. time, 9kMc/s 3=13298
  Cr^{3+} salt solns, e.s.r. 3=3818
  Cr^{3+} ions in solutions, crystals and glasses, absorption bands 0=10041
  Cr^{3+} ions in soln., light absorpt. 2=5018
  Cr^{3+}, spin level splitting, Jahn—Teller effect 3=10452
  Cr^{4+}, e. s. r. in α-Al_2O_3, meas. 4=7322
  Cr^{5+}, electron paramagnetic resonance, in glycerol or water 3=7219
  Cr^{5+} in tetrahedral, octahedral and dodecahedral coordination, spin—lattice relaxation 3=13311
  Cr^{n+}, analytical self-consistent-field functions 4=28122

Chromium compounds
  alum, e. s. r. fine structure, Cr^{3+} ground-state splitting 0=21073
  alum, spin–lattice relaxation 0=16158
  bi-nuclear complex ions, superexchange interaction between Cr^{3+} pair 1=12517
  chromates, magnetic susceptibilities, 80-360° K 3=5000
  chrome ferrotype plates, adsorption and desorption rates of polystyrene, for 10^{-1} to 10^{-4} mg/ml conc. 4=30888

Chromium compounds—contd
chrome potassium alum, mag. props. below 1°K 1=1196
chromia-alumina, adsorption of CO and CO_2 3=3359
chromia-alumina catalysts, optical meas. of specific chromia area 4=29174
chromia gel, ht. of Ar sorption 4=20818
chromite spinels, high-field magnetization study 1=20146
chromite spinels, Jahn—Teller and spin—orbit effects 4=15407
chromite, spinels, phase transformations 3=16018
chromium luminors, luminescence rel. to structure and deformations 3=20512
complexes, Cr^{3+}, $^4T_{2g}$ state, rotational strength 3=8271
corundum, ligand field for Cr^{3+} ions 2=10298
hydrated salts, magnetic absorption study 0=1825
ruby laser, power output characteristics, theory 1=16556
ruby, microwave generation due to optical absorpt. 2=20144
trigonal coordination cpds., theory of optical activity 2=23524
X-ray emission lines, chemical-bond effects 3=23086
Cr acetylacetonate, i. r. spectrum 0=20636
alloys, containing Y, cubic monocarbides, Mn and Re strength 4=30771
Cr alloys, mag. props., rigid band model 4=17624
alloys, magnetism, electronic model 1=20039
Cr alum, crystalline field strength, calc. 0=20720
chrome alum, mag. susceptibility 1=12522
Cr alum, nonresonant paramag. absorption of sound 3=22652
Cr alum, spin system, thermodyn. props. 2=18531, 20937
Cr alums, crystal growth, in silica gel 0=13946
chrome alums, paramag. resonance, elec. field effects, 4-300°K 1=5071
Cr-based alloys, mag. susceptibility 2=1246
Cr borides, carbides and nitrides, elec. props. 1=3707
borides and carbides, thermoelec. power with Cu 1=12465
Cr carbide, nucleation on twin boundaries in stainless alloys 2=2408
Cr carbides, elec. props. 2=23378
chromic chloride, principal magnetizations 1=10174
Cr III complexes in aq. soln., e.s.r. study 4=201
Cr(III) complexes in rigid glass, luminescence meas. 4=22920
Cr dihalides, mean amplitudes of vibr. and shrinkage effect, 1000°K, 1250°K and 1500°K 4=30441
Cr ferrite, Grüneisen's const., X-ray meas. 4=1407
Cr fluoride, molten, absorption spectra 0=19155
Cr(II) halides, mag. props. at 4.2°K 0=3006
Cr halides, vaporization, dimer formation 0=3566
CrK-alum, heat transfer below 1°K 0=7038
CrK alum, meas. of e. s. r. molar power transfer const. 0=11932
CrK alum, P_f^2—T curve and colour transitions 4=28761
CrK alum, paramagnetic relaxation at low temp. 1=14793
CrK-alum, power transfer between paramagnetic spin and crystal lattice phen. 1=9065
Cr K sulphate alum, phase transition, 192.5°K 4=29006
Cr monohalides, lattice energy and stability calc. 2=10296
Cr nitrides, elec., thermoelec. props. 3=865
chromic oxide devices for submillimeter wavelengths 1=6381
chromic oxide, photocond. 2=8434
Cr oxychlorides, fluorides, sulphates, e.s.r., and mol. struct., bonding 4=20098
Cr paramagnetic salts, Faraday rotation 0=667
CrRb-alum, mag. susceptibility below 1°K 0=8035
Cr^{3+} salt solns., e.s.r. 2=5028
Cr silicides, conductivity, elec., solid and liquid, var. conc. 4=11212
Cr spinelides, crystallochemical transformation rel to calcination 3=16081
Cr spinellides, thermal conductivity, rel. to temp. 4=9868
Cr spinels, deformation by spin—orbit and Jahn—Teller effects 3=1010
Cr-spinels, ferrimag. arrangements, magnetization study 0=11901
Cr-spinels, low moment origin 0=3079
Cr trisethylxanthate, mol. electronic struct., ligand field theory 4=22412
Cr—Al liquid alloys, viscosity and elec. resistivity 4=8181
Cr—Al, θ-type structure 0=8208
$CrAl_7$, Cr_2Al_{11}, hot-hardness 2=2337

Chromium compounds—contd
Cr_2As, magnetic properties rel. to temp. 1=12547
CrB, crystal structure, rel. to similar types 3=18338
CrB, n.m.r. and quadrupole binding const. 3=20678
CrB, paramag. props. 1=20063
CrB, paramag. props. (150-800°K) and thermoelectricity 3=1124
CrB_2, quadrupole bond, n.m.r. meas. and calc. 3=11121
CrB, X-ray absorption spectrum, bond characterization 1=14617
$CrBO_3$, with calcite structure, X-ray evidence 4=29105
CrBr, mag. antiferromag. at low fields, transition to ferromag. at high fields, angle effects 4=10297
$CrBr_2$, crystal structure 2=15025
$CrBr_3$, dislocation multiribbons and stacking faults 4=22585
$CrBr_3$ dislocation ribbons, geometry, surface influence 3=17734
$CrBr_3$, domain structure, light-diffraction study 3=11072
$CrBr_3$, epitaxy on $CrBr_2$, dislocations obs. 2=4398
$CrBr_3$, ferromag. and paramag. res. line widths 3=23204
$CrBr_3$, ferromagnetic props. 1=17950
$CrBr_3$, mag. props. of single crystal 1=12521
$CrBr_3$, magnetic rotation of visible light 3=919
$CrBr_3$, mag. structure from neutron diffr. 2=18916
$CrBr_3$, magnetizations in domains and walls from n.m.r. 2=12685
$CrBr_3$, magneto-optical props. and ferromag. resonance 3=15656
$CrBr_3$, magnetostatic modes, visual obs. 3=23200
$CrBr_3$, n.m.r. of $Br^{79,81}$ in ferromag. state 4=28891
$CrBr_3$, principal magnetization below 40°K 3=3140
$CrBr_3$, use of spin-wave renormalization 4=15645
Cr_3C_2, structure, neutron diffraction study 1=2534
Cr_3C_2—Ni, elastic modulus, dependence on concentration of Ni 1=11500
Cr_7C_3, powder emissivity 0=16919
$Cr(CN)_6^{3-}$, resonance interaction valence force field 2=10235
$Cr(CN)_5NO^{3-}$ ion, e.s.r., Cr^{53}, C^{13} h.f.s. and lines 3=20014-15
$\lfloor Cr(C^{13}N)_5NO \rfloor^{3-}$, e.s.r., two h.f. splitting consts. 4=12512
$Cr(CO)_6$, bond length shortening, theory 3=10497
$Cr(CO)_6$, Cr emission spectrum in shocked A—N mixture 1=13933
$Cr(CO)_6$, resonance interaction valence force field 2=10235
$CrCl_2$, antiferromag. ordering and entropy changes 3=1061
$CrCl_2$, antiferromag. properties, neutron diffraction study 0=10184
$CrCl_2$, $CrCl_3$, spectra 4=28205
$CrCl_2$, crystal structure 2=15023
$CrCl_2$, heat capacity and entropy, 11-200°K 2=6273
$CrCl_2.4H_2O$, Cr^{2+} optical absorption 3=23066
$CrCl_3$, antiferromag., sublattice, low-temp. 3=25552
$CrCl_3$, crystal structures of the 2 phases from X-ray diffraction and Cl^{35} n.q.r. 4=17808
$CrCl_3$, dislocation multiribbons and stacking faults 4=22585
$CrCl_3$, e. s. r. 4=10315
$CrCl_3$, e. s. r., g-factor anisotropy, room temp., 36 kMc/s 0=21072
$CrCl_3$, ferromag. and paramag. res. line widths 3=23204
$CrCl_3$ in LiCl—KCl, e. s. r. 4=10315
$CrCl_3$, n.m.r. of Cr^{53} 2=4283
$CrCl_3$, n. m. r. of Cr^{53}, var. with temp., mag. field, and antiferromag. 4=13341
$CrCl_3$, neutron diffrn. invest. of antiferromagnetism 1=20159
$CrCl_3$, paramag. susceptibility in 0.5 MOe fields 2=23632
$CrCl_3$, partial dislocation multiple ribbons 2=10391
$CrCl_3$, principal magnetization below 40°K 3=3140
$CrCl_3$, proton relaxation times, temp. dependence 1=4361
$CrCl_3$ in $ZnCl_2$, e. s. r. 4=10315
CrF_2, antiferromag. props., neutron diffr. study 0=10184
CrF_3 ferrimag. and antiferromag. props. 0=13839
CrF_3, mag. moment, superexchange interaction 0=11902
CrF_3, weak ferromagnetism 0=18205
Cr_2F_5, crystal structure 4=23433
Cr—Fe alloy, X-ray diffraction, line intensities, temp. depend. 3=20864
Cr—Fe alloys, average ferromagnetic moment 3=11055
Cr—Fe, b.c.c., specific heat, 30-110°K 1=17414

Chromium compounds—contd

- Cr—Fe, components migration, in d.c. field 1=12655
- Cr—Fe, donor—acceptor interactions 0=732
- Cr—Fe, elec. resistivity, temp. depend. 0=7910
- Cr—Fe, Fe diffusion, under high-temp. plastic deformation 1=14309
- Cr—Fe, Hall effect meas. at room and liq. N_2 temp. 4=22668
- Cr—Fe, high-temp. annealing, short-range order 1=11580
- Cr—Fe, ion bombardment, dislocation study 0=1927
- Cr—Fe, K absorption edge shift 1=11388
- Cr—Fe liquid alloys, viscosity and elec. resistivity 4=8181
- Cr—Fe, magnetic susceptibility by 3d electron band picture 1=17935
- Cr—Fe, phase transformations, changes in electronic state 1=20585
- Cr—Fe, polarization of Cr^{51} 0=13115
- Cr—Fe, specific heat 0=17896
- Cr—Fe, specific heat, —140 to 350°C 2=6275
- Cr—Fe, thin foils, dislocation networks by electron microscopy 1=11211
- Cr—Fe, vacancy density, Cr conc. depend. 1=4982
- Cr—Fe, vapour pressure of Cr 1=2539
- (CrFe)B, Curie points and magnetic moments 3=8637
- Cr—Fe—C liquid alloys, viscosity and elec. resistivity 4=8181
- Cr—Fe—Ni, mag. hardness rel. to structure 2=2281
- Cr—0.5% Fe—0.16% Ni, Neél temp. 2=10678
- Cr—Fe—Ni, with 2.5% Ti, precip. hardening 0=3012
- $(CrFe)_2O_3$ mixed crystals, Néel temp. 4=1871
- $Cr_{0\cdot75}Fe_{0\cdot25}Sb$, paramag. susceptibility 1=6271
- Cr with Fe, Zr, Be, elastic props. and internal friction 1=14853
- Cr—Ga, structure 1=6528
- Cr—Ge, ferromagnetic properties rel. to temperature 1=11424
- CrH, "hexagonal Cr", crystal structure, atomic 4=2076
- CrI_2, crystal structure 2=10871
- CrI_2, phase transform., high temp. search 4=23261
- Cr-Ir, superconductivity and ferromagnetism 3=1900
- Cr—Ir alloys, superconductivity, and ferromag. 4=16342
- $CrK(SO_4)_2\cdot 12H_2O$, colouring by Cr^{3+} ions 0=4410
- $CrK(SO_4)_2\cdot 12H_2O$, double refraction, magnetic, X band 4=13022
- $CrK(SO_4)_2\cdot 12H_2O$, paramag. res., saturation 0=10223
- $CrK(SO_4)_2\cdot 12H_2O$, paramagnetic resonance 2=21381
- Cr—Mn alloys paramagnetic susceptibility 2 =4209
- Cr—Mn(15%), antiferromagnetism, from neutron diffr. 3=18110
- Cr—Mn(15%), neutron diffr., superlattice peak and antiferromag. 3=18110
- Cr—Mn, 1.4-4.2°K, specific heat 0=17896
- Cr—Mn, paramag. susceptibility, rel. to temp. 3=999
- $(Cr_{0.9}Mn_{0.1})Sb$ antiferromagnetic anisotropy 1=12549
- $(Cr_{0.9}Mn_{0.2})Sb$ antiferromagnetic anisotropy 1=12549
- Cr—Mo, sintering 0=12070
- Cr—Mo, X-ray absorption, electron spectrum 0=1937
- Cr—N, dilute, precipitation and elec. cond. 3=6865
- CrN, antiferromag. structure, by neutron diffraction 0=6248
- CrN, current carrier activation energy meas. 4=12906
- CrN films, electron diffraction study 0=14010
- CrN, magnetic structure 0=3101
- $[Cr(NH_3)_6]Cl_3$ crystals diluted with $[Co(NH_3)_6]Cl_3$, paramag. res. 3=1182
- Cr—Nb—Ni, polymorphous transformations 3=5119
- Cr—Ni, constitution diagram 1=1436
- Cr—Ni, crystal structure by X-ray diffraction 1=10267
- Cr—Ni, elastic props., effect of temp. and composition 1=20305
- Cr—Ni, elastic props., effect of temp. and W and Mo admixtures 1=20308
- Cr—Ni, equil. diagram 3=11289
- Cr—Ni films on ceramic, temp. coeff. of resistance, -55° to + 150°C 1=8926
- Cr—Ni films, vacuum deposited on glass, thickness and composition 4=20809
- Cr—Ni, hetero-diffusion coeff., 450-900°C 1=12402
- Cr—Ni, impurity carbide precipitation 2=15069
- Cr—Ni, mobility of Cr ions in electric field 1=7596
- Cr—Ni, mosaic block size during aging 2=8853
- Cr—Ni, ordering, effect of quenching temp. 0=8271
- Cr—Ni, structure at high temp. up to 1260°C 4=26538

Chromium compounds—contd

- Cr—Ni—Al alloys, Cr vapour pressure, 1060°-1300°C 3=1872
- Cr—Ni:C, Cr carbide precipitates on dislocations 1=15146
- CrO, crystal structure, atomic, from powder pattern 3=23369
- CrO, spectrum, $A^5\Pi \rightarrow X^5\Pi$ band r-centroids, F—C factors 4=30427
- CrO, CrO_2, CrO_3, dissociation energies 1=4513
- CrO_4^{2-}-ions, Urey—Bradley and orbital valency force field applications 2=3722
- CrO_2, anisotropy energy, erratum 4=15397
- CrO_2, anomalous temp. dependence of lattice const. 1=15079
- CrO_2, c-axis negative thermal expansion, rel. to Jahn—Teller effect 2=23079
- CrO_2, Cr^{53} n.m.r., below 240°K 3=18149
- CrO_2, cryst. anisotropy energy calc. 3=15413
- CrO_2, Curie temperature meas. 3=17022
- CrO_2, elec. cond. anomaly at Curie temp. 1=14395
- CrO_2, ferromagnetic, synthesis and properties 1=6272
- CrO_2 magnetization process and magnetic properties, rel. to size 1=10142
- CrO_2, modified, in Te—CrO_2, ferromagnetic 4=13174
- CrO_2, with var. V oxide, Curie temp., saturation moment 3=11054
- CrO_2, vibrational spectrum 4=10169
- CrO_2, X-ray and magnetic studies 2=12689
- $CrO_3 + Cr_2O_3$ reaction, study by i.r. spectroscopy 4=10169
- CrO_3, vibrational spectrum 4=10169
- Cr_2O_3, absorpt. bands, shift due to soln. in In_2O_3 2=21248
- Cr_2O_3, absorption spectrum, exchange splitting of Cr_3^+ lines 3=15672
- Cr_2O_3, on Al_2O_3, e.s.r. 3=13297
- Cr_2O_3, antiferromagnetic, low-temp. residual paramagnetism 4=26270
- Cr_2O_3, antiferromag., magnetoelec. effects 2=10636
- Cr_2O_3, antiferromag., magnetoelec. effects 3=834
- Cr_2O_3, antiferromagnetic reson., high-field meas. 3=11107
- Cr_2O_3, antiferromag. resonance, mag. moment meas. 2=12802
- Cr_2O_3, conductivity, rel. to nuclear radiation 3=2909
- Cr_2O_3, corrundum mag. lattice, spin configuration 4=30701
- Cr_2O_3, cotransfer with Al_2O_3, under hydrothermal cond. 4=26591
- Cr_2O_3, Cr $K\alpha_1$ doublet struct. 2=10213
- Cr_2O_3, crystal field and optical spectra, comparison with ruby 3=15675
- Cr_2O_3, dielec. consts. at 1 kc/s and 2 Mc/s 3=8548
- Cr_2O_3, effect at low O_2 pressure on Fe_2O_3 melting relations 4=14453
- Cr_2O_3, elasticity, temp., var., anomalies 3=6774
- Cr_2O_3, elec. conductivity of single crystal 4=26099
- Cr_2O_3, fine grains, antiferromagnetic resonance 3=23218
- Cr_2O_3 fine grains, mag. susceptibility rel. to diam., 20 to 400 A 3=1094
- Cr_2O_3 fine grains, superantiferromag. and superparamag. props. 3=1093
- Cr_2O_3, fine particles, antiferromagnetic properties 3=8697
- Cr_2O_3 grains, anisotropy energies 3=15905
- Cr_2O_3, impurities of equal or lower valency, kinetics of inclusion, and effect on elec. props. 4=28612
- Cr_2O_3 $K\alpha_1$ line measurements 1=6088
- Cr_2O_3, kinetics of Nb_2O_5, V_2O_5 donor addition 4=30535
- Cr_2O_3, magnetic exchange interactions 2=6681
- Cr_2O_3, mag. and optical props., ion pair model 3=25503
- Cr_2O_3, mag. structure, neutron diffn. meas. 4=28822
- Cr_2O_3, magnetization by elec. field, temp. depend. 1=20160
- Cr_2O_3, magnetization induced by elec. field 3=15740
- Cr_2O_3 magnetization induced by elec. field (magnetoelectric effect) 3=15739
- Cr_2O_3, magnetoelectric effect 1=1244
- Cr_2O_3, magnetoelec. effect 1=14369-70
- Cr_2O_3, magnetoelectric effect, origin 2=6418
- Cr_2O_3, magnetoelec. effect rel. to domain structure 2=2124
- Cr_2O_3, magnetoelectric effects, induced mag. and elec. moments 0=11907
- Cr_2O_3, magnetoelec. effects, review 2=12665
- Cr_2O_3, magnetoelectric effects, spin—orbit mechanism 3=4900

Chromium compounds—contd

- Cr_2O_3, neutron irrad. effect on elec. conductivity 4=10049
- Cr_2O_3, paramagnetic reson. absorp., 15 times reduction by heating at 1000°C 3=20643
- Cr_2O_3, paramag. susceptibility in 0.5 MOe fields 2=23632
- Cr_2O_3, particles 20-400 A diam., mag. props. 3=3137
- Cr_2O_3, photoelec. emission 2=5370, 11694
- Cr_2O_3 powder, magnetoelec. effect 3=13027
- Cr_2O_3 in ruby, Cr^{3+} pair interactions in e.s.r. spectrum 1=6419
- Cr_2O_3, small particles, antiferromag. props. 2=12794
- Cr_2O_3 susceptibility meas. 0=13863
- Cr_2O_3, v.h.f. permittivity, dispersion 1=5036
- Cr_2O_3, vaporization 1=4513
- Cr_2O_3, vibrational spectrum 4=10169
- Cr_2O_3, X-ray absorption spectrum, bond characterization 1=14617
- Cr_2O_3, X-ray emission, $K\beta'$ lines 0=20735
- Cr_2O_3, X-ray spectrum structure at short wavelength limit 1=6217
- Cr_2O_3, Zeeman effect of R absorption lines 3=15674
- Cr_2O_3, magnetic susceptibility 1=14759
- $(CrO_8)^{3-}$ ion in K_3CrO_8, bonding 2=16528
- $Cr_2O_3-Al_2O_3$ catalysts, mag. props. 0=11805
- $Al_2O_3-Cr_2O_3$, colouring by Cr^{3+} ions 0=4410
- $Cr_2O_3-Al_2O_3$, Cr content, by spectral analysis 2=862
- $Cr_2O_3-Al_2O_3$ mixtures, antiferromagnetism, e.s.r. study 4=26350
- $Cr_2O_3-Al_2O_3$ mixtures, X-ray and optical study 2=15022
- $Cr_2O_3-Al_2O_3$ system, lattice spacings and colour 1=20539
- $(Cr_2O_3)_{0.8}.(Al_2O_3)_{0.2}$, magnetization induced by elec. field 3=15740
- $(Cr_2O_3)_{1-x}(Al_2O_3)_x$ antiferromag. resonance, high-field. 3=1158
- $(Cr_2O_3)_{1-X}.(Al_2O_3)_X$, antiferromagnetic resonance 1=6412
- $Cr_2O_3-Fe_2O_3$, mag. structure, neutron diffr. meas. 3=13267
- $Cr_2O_3-SiO_2$ catalysts, mag. props. 0=11805
- Cr−Pt, mag. props. rel. to temp. 2=18893
- CrPt, mag. spin distribution 3=15860
- $CrPt_3$, mag. spin distribution 3=15860
- $CrPt_3$, ordered, ferromag., neutron diffr. 2=12729
- Cr−Re, specific heat, antiferromag. and supercond. 4=25853
- Cr−Rh alloys, superconductivity, and ferromag. 4=16342
- Cr-Rh, superconductivity and ferromagnetism 3=1900
- $Cr^{3+}-Rh^{3+}$ ternary oxides, isomorphism 2=4425
- Cr-Ru, superconductivity 3=1900
- CrS, mag. structure, neutron diffn. meas. 4=28762
- CrS_X (x = 0.95-1.20), elec. and magnetic props. 1=14465
- $CrS_{1\rightarrow 1.2}$, structure and electrical properties 1=11250
- $CrS_{1.17}$, ferrimagnetism, origin, by quenching and pressure squeezing 3=1024
- $CrS_{1.17}$, X-ray absorption spectrum, bond characterization 1=14617
- Cr_3X_4(X = S, Se, Te), antiferromagnetism, and atomic struct. 4=13267
- Cr_3S_4, mag. configuration calc., comp. with neutron diffn. meas. 4=28800
- Cr_5S_6 in Cr sulphides, mag. props. 2=12732
- Cr_5S_6, Cr_2S_3, ferrimag., origin, quenching, pressure squeezing effect, X-ray diffn. meas. 4=28834
- $CrSO_4.7H_2O$, Cr^{2+} optical absorption 3=23066
- $Cr_2(SO_4)_3.nH_2O$, hydration study by thermobalance and i.r. absorption 1=17897
- $Cr_2(SO_4)_3.nH_2O$, X-ray emission, $K\beta'$ lines 0=20735
- CrSb antiferromagnetic anisotropy 1=12549
- CrSb, antiferromagnetism 0=10112
- CrSb, criterion of semiconductivity 0=1625
- CrSb, elec. cond., temp. depend. 0=1612
- $Cr_{100}Sb_{94}$, heat treatment and thermoremanent magnetization 1=20161
- CrSb−MnSb system, magnetic structure 3=8698
- Cr−Se, ordered vacancies and elec. cond. 4=1549
- CrSe, elec. and mag. props., anomalies 2=23686
- CrSe, mag. structure, by neutron diffraction 1=9042
- CrSe, X-ray absorption spectrum, bond characterization 1=14617
- $CrSe_{1.00-1.07}$, magnetic susceptibility rel. to temp. 1=12512
- $CrSe_X$, $1.00 \leq x \leq 1.33$, elec. conductivity rel. to temp. 4=22763
- $CrSr_{1.17}$, ferrimagnetic properties 1=10173

Chromium compounds—contd

- Cr_3Se_4 1=15078
- Cr_3Se_4, mag. configuration calc., comp. with neutron diffn. meas. 4=28800
- Cr_3Se_4, mag. structure and props. 2=12662
- Cr_7Se_8 1=15078

Circuits—contd
  amplifier for liquid conductivity meas. 4=18633
  amplifier, low noise solid-state for semiconductor detectors 4=16748
  amplifier, multi-stage, for hot-wire anemometer 1=15931
  amplifier and pulse-height analyser for X-ray scintillation counter 1=4542
  amplifier for radiometric applications 4=21351
  amplifier, selective, with var. freq. and bandwidth 4=14549
  amplifier—transistor circuits for multiplication and log. conversion 4=8592
  amplifier, transistorized, with log. response 1=19060
  amplifier using hot electrons in metal films 1=8925
  amplifiers, microwave, low-noise 1=7088
  amplifiers, for p–n junc. radiation detectors 1=2938
  amplifiers, parametric, noise 1=7088
  amplifiers, wide band using transistors 1=18729
  amplitude analyser, differential, one-channel 2=7545
  amplitude analyser, one-channel, with spectrum recording 2=1362
  amplitude analyser, output pulse delay time, method of decreasing inconstancy 2=1363
  amplitude analyser, 20-channel 2=7542
  amplitude distribution analyser 1=7968
  amplitude-distribution analyzer 1=10663
  amplitude limiter 4=16408
  analogue-to-digital amplitude-to-time converter, transistorized 3=19148
  analyser, bidimensional for (n, γ) studies 2=10115
  analyser, harmonic, variable-frequency signals 2=7543
  appearance potl. recorder 3=2056
  arc discharge, moving striation vel. rel. to external resistance 1=18799
  Argonne 3-dimensional analyzer 1=11892
  artificial ear, acoustic coupling rel. to elec. impedance of receivers 3=3653
  attenuators, fixed, of identical resistor network 1=10653
  automatic conductivity plotting machine 1=16207
  automatic control through signal polarities 2=15868
  automatic frequency control, klystrons and microwave spectrometers 4=18644
  automatic magnetic field calibration 1=12000
  automatic plotting, second deriv. of Langmuir probe curves 3=12185
  automatic recording of nuclear data 2=9507
  BeV accelerator instrumentation 2=7682
  band generator, stable, with non-linear reactance 2=22147
  beam current integrator for electron accelerator 2=3109
  beam current integrator, 0.1-20μA 2=2989
  beat frequency bridge, for large signal field effect 2=11574
  beam profile indicator for high energy particle accelerators 2=9657
  book, rectification, amplification and oscillations 4=8581
  "boxcar" integrator with long holding times 1=13058
  bridge, a.c., with indication of unbalance direction 3=7412
  bridge, a.c., noiseproof 4=16389
  bridge, for capacit. of double layer on Hg dropping electrode 3=14476
  bridge circuit, for surface film, dynamic modulus, measurement 1=9354
  bridge for following kinetics of complex dielec. const. 2=19879
  bridge, four-terminal resistors comparison 2=17737
  bridge for high resistance semiconductor measurements 1=9518
  bridge for meas. of liquid metal level 1=10473
  bridge method for water-wave profile meas. 2=17425
  bridge networks, linearization of output 4=21435
  bridge, new modified Campbell's 1=11889
  bridge, resistance, simple a.c. with d.c. breaker amplifier 1=10650
  bridge and resonance, for resistance meas. 2=1344
  bridge, substitution, for r.f. permittivity meas. 3=14477
  bridge for temp. diff. meas. 1=11855
  bridge thermocouple circuit for piezoelec.-crystal current meas. 3=3974
  bridge, for tunnel diode I–V and conductance curve tracing 2=19829
  bubble chamber control and alarm, solid-state elements 2=20207
  bubble chamber liquid-H level and pressure indicator 4=16769
  bubble chamber operation 3=3975

Circuits—contd
  bubble chamber, picture reading flying spot digitizer, circuit 4=14990
  bubble chamber pictures, automatic processing 2=18041
  buffer store, 1800-bit, and readout system 2=2990
  cable amplifier for large amplitude impulses 2=5282
  calculating, analogue, for resolving power increase 4=14010
  calorimeter, const. power dissipation over wide temp. range 2=9441
  camera with moving film for artificial satellite photography 2=1030
  for cancelling magnetic fields 2=1556
  capacitative accumulator, linearity 3=1919
  capacitance—conductance bridge, dielec. meas. 3=21682
  for capacitance meas., for small and rapidly varying values 4=16386
  capacitor banks, low inductance, transient phenomena 3=12046
  capacitor and switch, low inductance 4=21446
  cascade generator, symmetrical 4=16575
  Castaing microprobe, electron image formation 3=21015
  cathode current stabilizer 2=22149
  cathode follower amplitude control 4=18645
  cathode-ray tubes, ionization current to ionizing current, ratio meas. 2=2799
  chromatograph, gas, cathode-ray, compact 2=11001
  chronograph, automatic counter, for routine short time intervals 1=8092
  chronograph, millisecond Vernier 4=16411
  chronograph, transistorized counter, for μsec time meas. 4=6
  chronotron for neutron spectrometer, calibration 1=2927
  cinecamera, time-lapse control 2=22073
  cinematography, flash tubes 1=9495
  cloud chamber, automatic electronic running 1=16627
  coaxial connector, fast distortionless risetime, design and construction 4=29847
  coincidence, nsec, using tunnel diodes 2=1365, 11594
  coincidence and pulse amp. selecting system, transistorized 1=18731
  coincidence, self-monitoring, anosecond resolution 2=10025
  coincidence, for slow phosphors 1=4539
  coincidence, Ge diode bridge, of millimicrosecond resolution 1=16224
  compensators for current regulation 4=29859
  concentric conductors, assembly technique 1=13016
  condenser discharge analogue for exploding wire 4=11556
  connector, solderless, for electronic breadboards 4=18637
  constant current supply for high-resistance loads 1=2926
  constant phase shift by first and third harmonic energising 4=24531
  constant-voltage unit, portable, for light source 2=19832
  contact-potential variation, area scanner 2=22131
  for control of c.r.t. with mechanical scanning 4=14554
  for control of cyclotron resonance systems 1=16457
  control system of nuc. resonance mag. field 4=757
  cosmic-ray telemetric procedure, light-altitude 2=9944
  cosmic-ray telescope, 3-coincidence 2=5756
  cosmic rays automatic data recording, transistorized 3=15057
  coupled, with non-linear Duffing reson. on one 4=18639
  coupling to mag. transverse waves of electron beam 2=17884
  cross-spectrum analyser, low-freq. 4=8
  cryogenic, low-impedance transmission drive system 2=17762
  cryostat, He, temperature stabilizer 1=10631
  cryostat liquid-level indicating apparatus 2=11226
  cryotron circuitry 2=7526
  crystal growth temperature control 4=4534
  current amplifier using electrolytic junction 1=9520
  current divider, for null d.c. measurements 4=14542
  current emitted by ionization gauge, regulation 4=2739
  current-pulse generator, 250 kA, 0.3μsec 4=14558
  current regulator, ± 0.1%, for u.v. source 4=14350
  current regulator for 10 000 A magnet power supply 4=11618
  current source, const., continuously adjustable,

Circuits—contd

current stabilizer and field sweep for electromagnet 4=18646
current stabilizer, for mass spectrometers 1=4662
current stabilizer with positive feedback in regulator amplifier 3=21693
current stabilizer for 10^{-7} to 10^{-9} A 1=5403
current stabilizer for X-ray tubes 3=9701
current stabilizers, transistor type, for electromagnets 1=16210
current step generator for currents ~5000 A 1=13060
curve plotting with pulse-height analyser 3=9392
cyclotron, isochronous, power supplies 2=7537
cyclotron, time-of-flight system 2=9499
d.c.—a.c. converter, using balanced Ross filters 2=11590
d.c., with e.m.f. sources, nonconservative elec. fields 2=11600
d.c. networks, conservative fields 1=10660
d.c. supply, 30A 4kW, using Si components 3=7413
damping in tuned LC circuit 1=7002
data handling equipment for nuclear physics 2=19852
Dauphinee—Mooser, zero-point detector 4=8593
decade scaler 1=7009
dee voltage stabilizer for cyclotron 3=2058
definitions of resonance, tuned coupled circuits 1=4536
delays meas., 10-50 × 10^{-9} sec. 2=7536
demonstration characteristics tracer for valves and transistors 1=5405
detection system, low-level low-freq. 3=3980
deflector voltage stabilizer for cyclotron 3=14695
detector for n.m.r. spectrometer 1=16609
detector, phase sensitive, for long integration time 4=14550
detector, reactor fuel rod burn-out 4=25467
Digiscat, digitally controlled meas. of multiple scatt. 2=13714
digital data processing, nuclear physics 3=5325
digital display for thermistor thermometer 3=24090
digital, for measurement of spectral line intensities 1=8230
digital transistor, for pulses in n.m.r. expts. 2=5496
digitizer-to-tape punch-coupling unit 1=15390
diode bridge nanosecond resolution coincidence circuit 1=16223
diode—condenser circuit, fluctuation spectrum 1=10654
diode leak-detector, control unit 2=1369
for discharge apparatus, "Tokamak 2" 1=1900
discharge, 280 V, characteristics rel. to spectral line intensities 3=24230
distributed amplifier for mμsec pulses 1=5581
for dynamic elast. and anelast. consts. of solids 2=10730
dynamic performance of boiling water reactor 1=3495
in EL3 nuclear reactor control system 1=2255
e/m expt. power supply 1=1865
e.m. servo-balance with differential transformer for magnetic susceptibility measurement 1=10757
e.m. wave attenuation meas. in super-high freq. pulse discharge 4=688
e.s.r. measurement, superhet microwave bridge 2=9727
e.s.r. spectrometer 2=16080
electret data transmitter 2=17765
electric current—vacuum analogy 3=21452
electric oscillation device, Bi, proposed 2=21112
electric pulse production and meas. 2=19835
electric stop clock control system 1=10652
electrical analogue for ht. cond. boundary conditions 4=27351
electrical models, boundary conditions, multiterminal network theory 4=18638
electroluminescence image amplifier 1=12981
electromagnet current stabilizer 4=425
electrometer circuit for low temps. 1=10656
electrometer, negative feedback 3=5604
electron beam currents, pulse ampl. meas. 2=1356
electron microscope power supply; resolution 5A 3=1911
electron microscopes, mag., current stabilizer 2=11584
electron microscopy, Zener diode voltage reference sources 4=3048
electron tube g_1—g_3 charact. display, 6BN6 3=21684
electron tube, Klystron, protection, filament voltage 3=24172
electronic analogue of human recognition system 1=4158
electronic apparatus for study of π°-photoproduction 1=7264

Circuits—contd

electronic instruments for plasma research 2=7538
electronic integrator switch, stable 2=13526
electronic-optical transducer, multistage, image control 4=431
electronic photographic recorder 4=337
electronic sequence control for programming events 4=14547
electronic variable delay to trace characteristic curves of counting circuits 3=24175
Enetra 110, track-visualization apparatus 3=4305-6
equivalent circuit of coupled vibrating system 4=259
equivalent circuits, for elec. and mag. props. of rocks 3=19135
excursions in reactors, rapid detection 2=10189
exploding wire, current meas. and transient skin effects 3=3981
fast circuit techniques in plasma physics 1=5438
fast—slow coincidence systems, accidental coincidences 2=9503
fast transistorized discriminator 2=2980
Fe film Barkhausen jump duration investigation, apparatus 2=21323
feedback control system with two nonlinearities 4=24529
ferroelec. loop tracer, allowing wide compensation 2=9513
ferromagnetic parametric amplifier 1=5582
filament lamps, hum cancellation 3=24177
fission chamber precision current integrator 2=10185
flash photolysis lamp, h.v. 4=24357
for flash tube triggering 4=29749
flash tubes during repeated discharges 3=1921
fluorimeter, for U analysis 1=11642
fluorometer, for decay times of 10^{-7} to 10^{-9} sec. 1=11834
fluxmeter, compensation of thermal e.m.f. and galvanometer drift 1=7006
four-probe method to meas. resistivity of Si 2=7530
Fourier comb, active filter element with wide Q control 1=7007
frequency control system, automatic, for linear accelerator 2=17910
frequency convertor, 50-300 cycle 4=14557
frequency-dividing networks for sound reproduction 3=23981
frequency doubling, pentode with two control grids 3=21683
frequency doubling, transistorized, up to 0·5 Mc/s 3=24169
frequency marker, 50 kc/s-10 Mc/s every 10 kc/s 4=27448
frequency multiplier, phase variations 3=24170
frequency response, a.c. circuits with negative L, C or R 4=18640
frequency-selective limiting, YFe garnet filters 2=9493
frequency spectrum analyser for cyclotron radiation 2=19861
frequency standards installation for microwave spectroscopy 3=19465
frequency transformation, using photomultipliers 4=16531
friction between polymers and steel, control circuit 1=11525
functional converter, for random voltage production 4=16405
in G2 nuclear reactor control system 1=2256
gain stabilization of photomultiplier 2=2979
gain stabilizing system for scintillation spectrometer 2=13524
gamma-ray spectrometer gain stabiliser, transistorized 4=25057
γ-spectrometer for coincidences, gating circuit 2=20296
gas pressure maintenance device at vacuum pressures 1=15975
gas-recoil neutron counter 1=19218
gas sampling pump, transistor-driven 3=21011
gate, fast linear, for shaping scintillator pulses for height analysers 3=19151
Gauss impulse generator 4=5535
Gaussian noise generation 1=8297
for Geiger counter characteristic meas. 4=16722
generator, low frequency 2=22132
generator of nanosecond steep-front pulses 4=18650
generator, slow sweep, for e.s.r. spectrometers 2=11811
for Hall effect and crystal impedance of KBr 1=14385
Hall effect measurement for magnetic cpds. 1=12418
harmonic generator, parametric, phase relns. 3=1912
He, liquid, level indicator 2=19793
hearing model 2=13209

Circuits–contd
heavy ion accelerator pulse modulator 500 kw 1=16446
heterodyne set, for rotational vel. meas. 2=1103
Hg-vapour plasma, pulsed probe meas. 2=1448
Hg-wetted contact relays 2=2696
high level oscillator for nuclear resonance 1=5605
high voltage generation by h.f. oscillations 2=5254
high voltage instability meas. 2=17736
high voltage precision regulator, transistorized 4=29849
high voltage pulse meas. system 3=12044
high-voltage stabilizer 3=24165
high-voltage supply, portable 4=16574
histograph for X-ray spectroscopy 1=20460
i.r. spectrum continuous recorder 2=19768
ignitron, stabilized switching 4=14546
ignitrons, switching, rel. to toroidal pinch 3=4143
impedance converter for digital voltmeters 3=9702
impedance functions, upper bound of derivative 1=18725
impedances, l.f., rapid meas. method 2=22128
impulse generator, 0.6 to 90 kV, ignition switched 2=19872
impulse generator, single-stage, tripping mechanism 2=1351
inductance potentiometer, piezo-susceptibility meas. 3=12288
induction pick-up for magnetotelluric invest. 3=9122
InSb Hall element thermal time const. meas 4=6978
integrating and differentiating, appl. to filters and acoustics 2=5255-7
integrator, digital, for small currents, pulsed and d.c. 3=19138
integrator, long-period, using Miller effect 3=5609
interferometer, microwave, polar, for plasma electron density meas. 3=4148
interferometer, ultrasonic, for elastic const. high-press. dep. meas. 3=223
internal friction, pendulum meas., oscillograph appl. 2=2316
ion gauge power supply transistor circuit 2=2794
ionization-gauge filaments, protection 3=5472
ionization gauge, ion current recording 2=21955
ionization gauge, power supply for pulsed magnetic field use 1=15980
ionization gauge, for transient pressures 10^{-4} to 10^{-7} mm Hg 1=10554
ionospheric resonance probe 2=17154
jitter-free presentation, raster segment 2=17761
KBr, pulse photocurrent, measuring device 1=11232
klystron, millimetre wave, synchronization with quartz oscillator 4=11790
LCR, resonance definitions 1=261
LGZ-10 oscillator, extension of r.f. heating range 4=14556
lag line and lag generator, 1-100 msec delays 4=14555
Langmuir, for electron energy distrib. meas. in plasma 2=1397
for Langmuir probe data, rapid reduction 3=5678
Laplace transformations 1=5113
level indicator for liquid He storage 1=10636
Liebman mesh, resistance between adjacent points 4=24528
light modulator with Kerr cell 2=22065
light source trigger, for bubble chamber 4=5905
of linear accelerator, 2 MeV, pulsed 3=16995
liquid-level indicator for opaque cryostats 3=24127
load controller, strain gauge based 2=19838
lock in, semicond. diode 4=27447
logarithmic intensity meter 2=19839
low-voltage supply with transistorized servo-mechanism 2=11573
low-voltage transistorized stabilised supply 4=16397
luminescence, decay time meas., 10^{-2}-10^{-5} sec 3=14478
magnetic, alternating, complex quantities 3=9909
magnetic field contours, measurement 1=11999
mag. field stabilization, beam deflection system 3=456
magnetic layers, inductivity, equiv. circuit 2=15863
magnetic probe, multi-coil 3=16954
magnetic resonance recorder recentring 4=8965
magnetometer, based on n.m.r. 2=7703
magnetometer, remote proton 2=5434
magneto-optical double resonance apparatus 2=7412, 17977
magneto-optical double resonance meas. 3=5533
magnets, pulsed system, design and construction 1=10761
maser rel. to classical oscillator 4=19250

Circuits—contd
for maser, three-level action in HCOOH 1=19020
mass spectrometer digitizer, holding circuit 4=24761
mass spectrometer, industrial 3=12260
mass spectrometer, ion source, power supply 3=12261
mass-spectrometer of omegatron type 2=7679
mass spectrometer, omegatron-type, emission control 1=16439
mass-spectrometer, sensitive time-of-flight, automatic data processing 2=13610
mass spectrometer, two-stage, for nuclear work 3=16993
mass-spectrometers, resolving-power multiplication 2=3102
mass spectrometers, scanning 3=14484
mean square voltmeter 2=11583
measurement of mag. fields, inductance and capacitance for undergraduates 2=13519
measuring resistors, phase error or a.c. correction 3=350
in Melusine nuclear reactor control system 1=2258
microbarograph 2=17406
microcalorimeter, E.Calvert type 3=3916
microcalorimetry, stabilized power supply 1=16214
microfurnace power supply 1=16213
microwave discriminator, frequency stabilization of reflex klystron 2=7532
microwave semiconductor switch, 100 dB 1=4547
Millikan condenser for e/m meas. 2=5594-5
millivoltmeter, Hall-effect pickup 2=17733
Millstone radar for satellite tracking 2=13202
modulation cct. for photomultiplier output 3=3979
Moiré fringe interpolator 4=8443
multichannel transistorized data recorder 1=13538
multidimensional transfer analysis 1=16228
nanosecond pulse amplification 2=19866
nanosecond scintillation decay times, meas. 1=8227
nasal consonants, articulatory analogue 2=7061
negative resistance and relaxation oscillators 3=9697
negative trigger generator 4=21436
network analogue, quadrupole lens system 2=5261
neutron beam collimation 2=20371
neutron diffractometer automatic programming-control system 3=1280
neutron network, circuit theory 3=7061
neutron spectrometer, time-of-flight, slow–fast coincidence system 4=6080
neutron-time-of-flight facility 2=13615
noise of undamped tuned circuits, rel. to n.m.r. amplifiers 1=2928
non-linear, matrix calculus, application to local oscillations 1=16222
nonlinear operations on pulses, using p—n junctions 1=5411
non-linear response theory 1=12809
nonlinear systems, harmonic response 3=19133
nonlinear systems, thermal fluctuations 3=11705
non-planar, duality, without ideal transformers 2=19822
n.m.r., frequency-swept absorption circuit 4=21664
n.m.r. magnet, stabilized power supply 4=8962
n.m.r. magnetic field stabilizer 1=7160
n. m. r. oscillator, frequency without amplitude modulated 4=5836
n.m.r. pulse apparatus 2=11814
nuc. mag. resonance twin-T bridge 3=517
nuclear data processing trends, review 2=9728
nuclear electronics conference 2=7534
nuclear experiment data storage, high-speed system 2=9494
nuclear instrument conference 3=12364
nuclear instrumentation symposium 2=3187
nuclear radiation meter, linear scale prod. 2=19854
in nuclear reactor control system 1=2263
nuclear reactor control systems, nonlinear stability 2=10166
nuclear system noise analysis, conference 4=19855
Nyquist plots, extension to non-linear loops 1=6805
ohmmeter, linear, 10^{-3}-2×10^{9} Ω 3=16884
omegatron mass spectrometer 4=21592
omegatron for partial press. meas. $<1\mu$ torr 2=13386
1 kW precision current supply 3=19136
oscillations decay counter 2=6716
oscillator, autodyne, tunnel diode, for e.s.r. detect. at low temps. 4=8957
oscillator, for cavity resonator h.f. system for proton accelerator 4=3076

Circuits--contd
oscillator, frequency stability 3=14486
oscillator, grid-current regenerative, for e.p.r. obs. 4=16673
oscillator, grounded grid, 100 Mc/s, used with r. f. ion source of particle accelerator 4=29852
oscillator phase-lock system, GR 1209-B 3=14485
oscillator, simultaneous self-maintenance of two frequencies 4=8590
oscillators, phase locking phenomena 4=27445
oscillatory memory device 2=17744
oscillograph time-base calibration 3=24171
oscillograph, ultrahigh-speed pulse 3=1914
oscilloscope recording of selected pulses from randomly arriving series 1=2929
oscilloscope sweep delay digital read-out 4=27449
oscilloscope time-base 4=16409
oscilloscope waveform recorder 4=21441
output indicator for differential transformer displacement det. 1=4294
PAPA, first machine 2=21791
parallel integrator, first-order approx. study 1=5404
parametric amplifiers, gain formula 1=7146
parametric convertors, noise figure and gain 1=4537
parametric system with large modulation depth 2=20138
particle accelerator instrumentation 3=24178
particle accelerator, Van de Graaff, source leak control, transistorized 4=3065
permeameter, versatile switching arrangement 2=17923
phase detector with phase modulation 4=16391
phase discriminator, gas-discharge 4=16390
phase meter, direct reading 4=16392
phase meter, with frequency multiplication 4=16393
phase sensitive detector to 100 Mc/s 4=29851
photocompensation amplifier 2=19840
photoconduction, spectra and kinetics, investig. apparatus 4=424
for photo diode VI characteristic 4=17502
photoelec. method, extracting weak pulse signals 2=19195
photoelectric recording of u.v. optical system 1=11835
photoluminescence, automatic adjustment of excitation voltage 3=1806
photometer, CdS, for electron emission, field 3=18960
for photometer, high-precision, photoelectric 1=2836
photomultiplier circuit for precision spectrophotometry 4=11497
photomultiplier dynode voltage regulator, transistorized 4=8818
photomultiplier gain stabilization circuit 3=24174
phototransistor galvanometer relay 3=348
phototubes, pulse operation 4=576
physiological "cold" stimulator 3=9699
piezoelectricity detector, f. m. 2-capacitor cct. 1=16218
plasma accelerator, by travelling magnetic waves 2=11680
plasma instrumentation 2=7624
plasma parameter meas., oscillographic method 2=19982
plasma probe, Langmuir chars., display 3=14600
polarizer analyser servo-system 2=17651
polyphase systems invariant under transformation to symmetric components 4=27446
positive ion source, triggered, low-voltage 4=19112
potential divider, decade 4=18647
potentialoscope, for multi-dim. nuclear spectra 2=7546
potentiostat, electronic, for currents up to 5A 1=4538
power control for high current furnace 1=16164
power leveller, microwave, for K band, milliwatt range 4=8928
for power reactors, with automatic run-up 1=2260
power stabilization, improved, in varying resistances 4=8589
power supplies, stabilized, positive feedback 4=16398
power supply for expander for betatron 3=14480
power supply, 500 - 10 000 V, mass spectrometer 3=24166
power supply, magnets, Si controlled rectifier, stabilized 3=19137
power supply for mass-spectrometer ion source 2=11728
power supply, stabilized using transistors 1=13052
power supply for student lab. 3=346
power transistor control of current of Varian magnet 1=7005
preamplifier, hybrid electrometer 4=21437
preamplifier, for resistance noise meas. 2=22134

Circuits—contd
precision clock using 10 Mc/s pulses 1=18342
precision current integrator, deadtime elimination 2=7533
probe for fluctuating air flows in axial compressors 2=15626
programmer for furnace temp. control 4=24422
projection lamps, high-wattage, Si controlled rectifier 4=27307
proportional counter, multiple-anode, X-ray diffractometer 1=9123
prospecting apparatus 1=13054
proton-electron pulse discriminating circuit 2=13615
proton pulsed beam, time meas. 2=5395
proton relax. in liquids, meas. 4=760
proton scintillation spectrometer, triple coincidence 2=13800
pulse amplification, pulse powering of tube 2=17757
pulse amplifier, nsec risetime 4=14548
pulse amplifier for nuclear spectroscopy 3=12047
pulse amplifiers, signal-to-noise ratio calc. 1=7010
pulse amplifiers, for solid-state radiation detectors 1=2937
pulse amplitude integrator 2=1360
pulse analyser, 100 channel 1=2933
pulse analysis, 2-D address systems 2=9497
pulse apparatus, nsec, adjustment instrument 2=22144
pulse arrival rate, rapid recognition 2=1348
pulse circuit for synchrocyclotron oscillator 3=2059
pulse delay for sampling instrumentation 2=22137
pulse-generation, random time with Poissonian distrib. 4=18651
pulse generator, crystal controlled 2=1350
pulse generator for ferromag. film pulse switching investigation 2=19864
pulse generator, 15 kV, of millimicrosec duration 4=429
pulse generator, 45 A, with Si-controlled rectifiers 4=433
pulse generator, h.t., for Kerr cell shutter 4=21444
pulse generator, high current low impedance 4=8595
pulse generator, for magnetrons 4=428
pulse generator, nsec., for ferromag. film behaviour investigation 2=19865
pulse generator, nsec., rectangular 2=22145
pulse generator, nsec, using avalanche transistors 4=16413
pulse generator, 0.01-0.5 μsec × 2 kV 4=16414
pulse generator for semiconductor lifetime measurements 3=12050
pulse generator, square, 3-300 nsec. 2=19870
pulse generator, 10 MW at 2 Mc/s 4=8596
pulse generator, for testing radiation detectors 2=5287
pulse generator for time of flight mass spectrometer 4=17855
pulse generator, 2-channel 4=432
pulse generator, 200 V, 5 millimicrosec 4=430
pulse generator, 2000 A, 50 nsec, for injection laser 4=19300
pulse generator, with var. delay time 4=16415
pulse, high power, "crowbar" triggering 4=18648
pulse, picosecond, characts., by self-sampling 3=5612
pulse power measurement 2=19871
pulse receiver system, stagger-tuned, rel. to relaxation time meas. 4=27443
pulse-shape, for γ-n discrimination 2=5270
pulse taumeter, modulated light source 3=1808
pulse transformers, wide band, low impedance 4=2930
pulse trigger, fast, transistorized, simple 4=434
pulsed radio signals, amplitude and phase fluctuation meas. 2=19837
pulsed voltage multiplier 2=19833
pulses, double-shaping in nsec region 2=17758
quartz frequency standard, new comparison technique 2=11320
quenching, of high power and sensitivity 1=9519
RC lines, non-uniform, steady-state sine-wave solutions 3=14487
r.f. bridge for pulsed n.m.r. exps. 3=9961
r.f. gate with 10^8 carrier suppression 1=9521
r.f. power system for linear electron accelerator 2=5397
r.f. pulse detector, nsec, frequency response 2=13522
r.f. spectrograph, tuned 2=5498
RLC, stochastic linear system theory 2=2639
for radiation monitors with sound indication of intensity 3=2169
for radio telemetering temp. 3=7374

Circuits—contd
  radiometric apparatus, vacuum tube–transistor stages 3=24176
  random pulse generator 2=5280
  random pulses, time and height analysing methods 1=5407
  random signals, recording method 2=1349
  rapidly varying parameter recording 2=17407
  reactor control, treatment of results 1=13900
  reactor instrumentation, transistorized 1=13053
  read-out for optical alignment device 4=18017
  real passive networks, amplitudes, phases 3=5602
  receivers, noise suppression for meteor echo studies 1=11686
  recording e.p.r. lines by integrating derivative of signal 2=19841
  recording integrator 1=2561
  for registering sinusoidal voltage amplitude minima 4=14553
  regulated supply for electronic flash tubes 1=16217
  relativistic motion 1=5189
  resistance and dissipation into reactive circuits 1=13048
  for resistance meas., pulse method for up to $10^{10}\,\Omega$ 4=16395
  resistance network analogues for elasticity problems 2=1089
  ruby laser, output fluctuation control by feedback system 3=5890
  sampling oscilloscope use with random signals 4=21442
  satellite i.r. radiometer 2=11199
  scalar, Dekatron type 2=1353
  scalar, mechanical binary 4=27009
  scale-section converter analysis 4=8582
  scanning, automatic, of nuclear emulsions 2=18044
  scanning oscillator with short time lag 2=19862
  scattering, multiple, photoelec. transducer 2=20204
  scintillation counter, amplifier 1=10807
  scintillation counter, time resolution 2=9734
  scintillation detector, time resolution 2=11830
  scintillation spectrometer, with automatic counting 2=7793
  scintillation spectrometer, for particle identification 2=5517
  scintillation spectrometer, with two crystals 2=7794
  Seebeck coefficients, rapid meas., method as $\Delta T \to 0$ 2=23490
  self-oscillating, inclusion, of electroluminescent cell 2=5265
  semiconducting diode minority carrier lifetime meas. 4=1626
  semiconducting tunnel diode scale-of-four 3=17917
  semiconducting tunnel diode univibrator, improving 3=14488
  semiconductor research, data recording system, automatic 2=8394
  servo with backlash in output coupling 4=24530
  shock tube, 8 × 2 in. 3=1763
  shock tube, gas cond. and boundary layer thickness meas., frequency modulation 2=13521
  for shock tube, precursor 4=27251
  shot peening, microcapacity measuring circuit 3=3976
  shunting of pulsed high-field mag. coils 1=13152
  Si voltage stabilizer, under power balance condition 4=426
  σ-Stark-splitting patterns, automatic recording 1=12282
  simulator for ear basilar membrane freq. discrimination 3=21155
  sinusoidal voltages of given phase, amplitude, freq. 2=3156
  smear camera, rotating mirror, synchronization and speed meas. circuit 2=13470
  solid circuit microminiaturization 2=17743
  solid-state, conference, Philadelphia (1963) 3=14465
  space vehicle tracking, guidance, communication system 2=11207
  space vehicles, instrumentation, automatic range switching 3=13940
  spark chamber, event selection by closed-circuit TV 2=9758
  spark chamber track measuring system 2=20216
  spark gap, controlled double-trigger 3=1920
  spark gap switch, low inductance, low press. 2=17760
  spark gap trigger, zero energy, up to 250kA 4=14611
  spark-gap triggering 1=11918
  spark-triggered arc electrode shock hazard removal 4=29895

Circuits—contd
  spectral analysis by u.s. light modulator 2=17599
  spectrochemical analysis, general light source unit, pulse generator 2=5170
  spectrometer, i.r., two-beam oscillating mirror 2=9060
  spectrometer, microwave, induction, superheterodyne 1=10803
  spectrophotometer, stellar, integrating 2=927
  speech circuits with long delay, echo elimination 4=4969
  speech, pitch extractor for fundamental frequency 4=4966
  speech-transmission, evaluation 2=15426
  spring balance, high capacity, remotely operated, radiation resistant 1=15774
  square-pulse prod. by transistors in avalanche mode 2=11593
  stabilizer, current, 0.1-11 mA 4=16401
  stabilizer, current, using mag. field 4=16402
  stabilizer, γ-ray spectrometer 4=11968
  stabilizer, MV-pulses of accelerator pulse transformers 4=16576
  stabilizing, for magnetic lens current 4=11709
  for step-voltage production 4=14551
  stilbene scintillator, pulse shape discrimination 1=10813
  strain gauge, factor determination, method 1=10467
  stroboscope and noise discriminator, Hall effect 2=2967
  superconducting, thin-film strips and persistatron 2=1341
  superposition theorem, Maxwell's soln. Kirchhoff's laws, student expt. 2=17742
  supply for ionization gauge 1=16216
  sweep generator, triangular waveform 4=21440
  swept-frequency receiver 1=8021
  switch, with floating preset differential 2=5260
  switch, 100 kV, for high-energy capacitor discharge 3=349
  switches, Pb thermal, low-temp. props. 2=2942
  switches, superconducting, review 4=8577
  switching circuit, equivalent to biochemical reactions system 1=20720
  switching device, phase synchronization 2=17574
  switching functions for synthesis of 3 level circuits 4=27444
  switching of high-power pulses, discharge device 2=22146
  switching of large pulse-currents, vacuum gap 2=17796
  switching-time recording 3=16889
  switching, 250Mc/s 3=14490
  synchronous excitation of suspended systems for elec. and mag. meas. 4=2925
  synchrotron magnet power circuit 1=18728
  synchrotron, magnet supply circuit, blocking inductor 1=8290
  TV closed-circuit for cloud chamber photographic track-following 2=9753
  tecnetron as circuit element 1=17782
  television receiver scanning, aperture influence compensation 4=11495
  temp. rise, linear or hyperbolic, electronic controller 3=14407
  temperature stabilizer for ion-source diffusion-chamber 4=617
  temperature-weight simultaneous meas., automatic set-up 2=9231
  termination of attenuating inhomogeneous lines 2=17963
  test jig for transistor current gain, 30-300 Mc/s 2=17750
  thermistor bridge, for $\simeq 10^{-3}$ degree changes 4=18464
  thermistor, const. sensitivity bridge 2=2968
  thermistors in l.f. circuits 4=18641
  thermocouple potentiometer 3=14475
  thermocouples, time constant detm. method 4=350
  thermodynamics, Onsager–Casimir relns. 3=12039
  thermoelectrically maintained standard temperature, ice point 3=19050
  thermometer, resistance, Pt, deep sea, short time const. 3=19053
  thermometers, diodes and transistors 2=9438
  time to amplitude converter 4=3258
  time–amplitude converter, sub-nsec meas. 3=19149
  time-to-amplitude converter, transistorized 1=13057
  time analyser 2=1366
  time analysers, multichannel, nsec range 3=16574
  time distribution, pulses in $10^{-7}-10^{-5}$ sec range 2=17755
  time-of-flight selector 1=2931

Circuits--contd
time-of-flight single channel analyser for nanosecond region 1=5412
time marker for cyclotron 2=22287
time measurement in nanosecond region 1=18738
time-to-pulse height convertor as coincidence indicator 2=7541
time-relay, multiposition automatic 4=16410
time resolved spectroscopy, precision system 3=1813
timed, universal programmed 3=9700
tracking system using lateral photoeffect 2=21200
transducer, capacitive, non-linear twin-T network 4=16407
transducer, RLC parameters of equivalent circuit 2=17545
transformer, ohmic-heating 2=19831
transformer for use in magnetic film logic 4=24793
transformers, r.f., wide-band shielded 2=9516
transients in log count-rate and period meters 1=2932
transistorized logarithmic time base 3=24173
transistorized series regulator for electromagnet 2=17759
transistorized stabilized power supply 0-2000V 3=14481
transistorized time standard 3=1654
transistorized triple pulse generator 2=19867
transistors with avalanche mode, selection 2=23434
triggered film advance system for scintillation chambers 2=20191
triggering circuits for spark chamber 4=9028
tunnel diode discrimination, d.c., hysteresis 4=21439
tunnel diode, fluctuations 2=15871
tunnel diode for liquid scintillation counting 2=2978
tunnel diode parameter determination 2=22135
tunnel diode, pulse-shaping 3=19139
tunnel diode scaler 2=22136
tunnel diode series resistance meas. 2=19828
turnstile junction 3=347
25 kV target modulator sweep circuit 3=12265
u.s. absorption in metals at low temps. 2=5123
u.s. attenuation studies, instrumentation 2=21983
for ultrasonic interferometers, choice and tuning 4=290
ultrasound velocity change measurement 4=8356
vacuum gauge, semiconductor 4=11266
vacuum gauge, thermocouple 3=5473
vacuum pumps, ion getter 3=5471
vacuum-tube pulser, 30 kW, 500 μsec 1=4588
voltage converter, transistorized 4=16400
voltage and current stabilizer 1=16211
voltage meas., strong fields present 3=21672
voltage multiplication device 4=16406
for voltage stabilization, cyclotron reflecting system 4=14787
voltage stabilizer for Cockcroft--Walton machine 3=9882
voltage stabilizer, compensation circuit, for Van de Graaff injection 2=5414
voltage stabilizer for electrostatic generator 4=16577
voltage stabilizer, 50 kV d.c. 3=14479
voltage stabilizer for photometry 3=9698
voltage stabilizer for photometry 3=16888
voltage stabilizer, r.f., for cyclotrons 1=4679
voltage stabilizer for transistor power supplies 4=16399
voltage step generator 3=18649
voltmeter, impulse peak 2=15865
voltmeter, pulse-sampling, and application to transistor testing 1=9517
wattmeter for phosphor power absorption meas. 4=17592
waveform, random, statistical analyser 2=17336
Wheatstone bridge, sensitivity 4=21434
wide-band electronic integrator 3=24168
Wilson cloud chamber, self-triggering 1=13241
wind velocity meas. instrument, multivibrator, unistable 2=21622
X-band microwave apparatus for ferromagnetic resonance measurement 1=9048
X-ray emission spectra, shape correction 3=5601
X-ray image intensifier, solid-state 2=9669
Zener diodes as voltage-controlled capacitors 3=25380
zero-crossing photomultiplier pulse 2=19863

Clay
adsorpt. of Al_2O_3, electron micrograph 4=23684
ion exchange on 3=11364
kaolinite, Fe^{3+} ion, paramagnetic resonance 1=10180
kaolinite, hydrous micro-quartz clay, moisture expn., surface area 3=6878

Clay—contd
magnetic moments, small, permanent, meas. method 4=8889
marine sediment, u. s. velocity and absorption 0=8739
minerals, X-ray anal., conference 0=8289
montmorillonite suspensions, small-angle X-ray scattering 2=19167
montmorillonite suspensions, small-angle X-ray scattering study 1=6579
plasticity, hysteresis effects, model 4=23137
plasticity, meas., two new instruments 3=13360
rheological consts. and flow schemes 4=15854
structure, aqueous props. investigation 2=15081
suspension, yield stress 0=16391
Ukranian, dependence of thermal coeffs. on moisture 0=8823
water between layers, n.m.r., rel. to temp. 3=23261
X-ray diffraction meas., adsorption cell 4=2058

Climatology
See Meteorology; Weather.

Cloud chambers
Aitken, droplet growth under extreme cooling 3=302
automatically controlled, variable pressure 0=3894
complex nuclear reactions observation 1=13240
convection, with cellular bottom 4=784
convection chambers, props. and applic. 2=1633
counter-controlled for specific interaction, high press. 2=3224
coupled to β-spectrometer 4=16878
diffusion chamber, with ionization chamber control 2=1636
diffusion chambers, effect of Pb plates on sensitive layer 2=1635
diffusion cloud chamber 2=5536
diffusion, with constant supersaturation 4=16764
diffusion, controlled by photoelec. multiplier 3=2171
diffusion, methyl alcohol in H_2, density distrib. 4=783
diffusion, neutron polarization meas. 3=19654
diffusion, track photography 2=20206
diffusion type, review 0=3895
diffusion-type, temp. distrib. 2=3222
diffusion type, theory 0=2464
direct particle velocity determination 0=7252
electron avalanche growth, study of 3=21711
for electron avalanche studies 0=16974
electron-neutrino ang. correl. investigation 2=5618
evaluation of photographs, semi-automatic apparatus 1=16629
expansion chamber used with 340 MeV electron synchrotron 0=17286
expansion valve, differential pneumatic type 4=14987
He, at low press., operation 4=19338
He, low pressure, flash photography triggering 3=2172
He^4 supersaturated vapour, condensation 0=7018
high-pressure diffusion chamber, with pulse mag. field, for H_2, He and D_2 1=19073
high-pressure diffusion, design and construction 1=13242
hydrogen, 250 keV e^+, e^- ionisation measurement 0=1271
ice nucleation study 3=1273
illumination of large chamber by electronic flash tubes 4=5908
illumination of multiplate type 4=21714
illumination system 4=16767
illumination system for observation of low-contrast tracks 0=11071
ionization type, with alcohol vapour diffusion in argon 3=7745
large, photography, rel. to simultaneous pulse and ionization meas. 4=781
low-press. expansion type 1=13238
low-pressure, internal counter controlled 1=16627
low-pressure operation 2=1637
measurement of photographs with punched card output 4=9039
methane diffusion, for neutron spectrometry 2=5537
with methyl alcohol, effect of acetone 2=1639
mirror diffusion chamber, mag. field operation 2=1638
multiplate chamber for cosmic ray study 0=20252
nuclei, hypersensitive stable charged droplet 3=3933
operation, counter control 0=17159
optical meas. on aerosols, design 3=9584
phase-shift analysis with D-waves for track-chamber histograms 1=5698
photographs, track-centring and following by closed-circuit T.V. 2=9753

Cloud chambers—contd
pressure variation, during track formation, application 0=11072
rectangular, without complex expansion mechanism 2=18035
relativistic increase of specific primary ionization in He 1=8407
review 4=24935
shock valve, fast-acting electrical hydraulic 2=18036
stereophotographic frames, numbering 4=16766
stereoscopic reconstruction of events 0=15198
stopping power, atomic, gas—vapour mixture, with temp. gradient 3=22046
survey 0=17158
temperature and vapour press. meas., in cloud chambers 2=5538
track formation, scattering of light 2=3223
track photographs, photometric meas. of ionization 4=16765
track simulator, three dimensional 4=30132
tracks, ionization measurements 4=14986
use for study of extensive air showers 1=3286
vacuum jacket to increase effective observation area 1=3095
variable pressure type, self-triggered 1=16628
Wilson chamber, super-compression ratio, data for 2 vapours 2=1634
Wilson, demonstration using point corona 4=27728
Wilson, efficiency of condensation on ions 2=3221
Wilson, ionization meas., photometric method 1=19074
Wilson, optimum working conditions 2=22369
Wilson, self-triggering 1=13241
Xe filled, relativistic increase of ionization 0=1099

Clouds
accuracy of data derivation, requirements in satellites 4=26785
aircraft studies over British Isles 1=15228
altitude meas. from satellite 1=20837
artificial seeding, PbI_2 aerosols 3=8987
and atmospheric electricity, pot. gradient, lower troposphere 3=18513
brightness, spatial distrib. 3=18509
buoyancy increase, atmospheric thermals 3=11402
cellular stream motion 1=12850
cirrus, emissivity meas. 3=18548
cirrus i. r. reflection meas. 4=10713
cirrus, i.r. reflection props. 3=16219
cirrus, and increase in electrical pot. gradient and cond., 200-300 mb level 3=18512
cirrus, in jet streams 3=21035
cirrus, optical sounding, height, crystal melting 2=4596
cirrus, snow crystals 3=18504
cloud chamber effect, natural conditions 2=19200
cloud-droplet collision efficiencies 0=16491
cloud physics conference, Australia 2=11021
cloudiness, correl. with global radiation 2=17142
convection, generated by moist air mass, calc. 4=7828
convection, salt-induced, 3=16218
convective, life cycle, role of condensed water 4=29281
cooling rates, anomalous adiabatic 2=24019
crystallization, propagation theory 4=2193
crystallization of supercooled clouds caused by Pb iodide aerosols 4=13790
crystallization of supercooled water clouds 0=3361
cumuli, small, convective patterns. 3=25876
cumuliform, evolution of droplet spectrum, theory 3=3464
cumulonimbus clouds, small, glaciation 3=9038
cumulo-nimbus updraughts, entraining jet model 3=6960
cumulus congestus, precip. particle meas. 3=9037
cumulus, development, axially symm. 3=3463
cumulus, formation and refractive index 0=21321
cumulus, growth 4=7840
cumulus, initial electrification, rel. to atmos. space charge. 3=25884
cumulus, initial electrification, rel. to space charge 3=9039
cumulus, precipitation model rel. to dropsize meas. 3=5201
cumulus theory 4=30930
cumulus, updraft, eddy structure growing droplets and depth of first radar echo 3=13668
distribution and altitude profiles by reflected sunlight, satellite obs. 2=11022
drop collision, coalescence, disruption 4=30910
drop condensation, latent heat effects 4=26792

Clouds—contd
drop growth rel. to chloride particles 2=21635
droplet collision efficiency in electric fields 4=4767
droplet growth by condensation in cumulus 2=13002
droplet growth, large, cumulus clouds 4=2194
droplets, coagulating, kinetic eqn., allowing for condensation 4=15869
droplets, collision efficiency in electric fields 3=13677
droplets in rising air current, coagulation eqn., soln. 4=4766
e.m. wave obs., 30, 50 Mc/s 4=17889
electric field effects on precipitation processes, review 4=10720
electric fields below clouds 1=15229
electrical properties by radiosonde 0=4784
electrification, aircraft observations 0=21391
electrification, calculation by charge-separation mechanism 1=20836
electrification mechanism for thunderstorms 2=11028
electrification of melting ice and snow 4=2203
electrification of water droplets and ice particles 4=2202
formation by controlled convection. 3=25886
formation, pptn., review 3=1439
gas cloud, expansion in presence of ambient gas 4=14202
granularity meas. by light scatt. 3=21009
gravity settling of cloud drops, effect on water content 4=15868
grenade glow, diffusion rel. to atm. density, 120-180 km 4=23772
hailstones, influences on growth 3=1443
height meas., photoelec. scanning system 4=29279
heights and night-time cloud cover from Tiros radiation data 4=23747
i. r. transmission, ice crystal and water vapour clouds, distinction 0=14302
ice cloud formation at mesopause 3=1440
ice crystals formation and props. 4=7559
ice crystals, mechanism of formation 2=15809, 19975
ice-nucleating activity of materials 3=1273
ice nucleation conditions 2=2477
ice pellet nucleation study from cloud top 2=15191
indirect probing techniques using radar 3=5188
layer, formation and development 4=30932
light beam attenuation, effect of diffusion 3=3467
lightning atmospherics 3=9049
and lightning spectra 1=20865
longitudinal rolls, theory 3=9412
luminous, in upper atmos., photogr. instrumentation for triangulation 4=17917
macrophysics, structures, elec. and other props. 3=18505
meteor particles, rainfall initiation 2=15193
microstructure, study with continuous photoelectric device 4=7839
mother-of-pearl, two-dimensional model 3=1441
movements, and diffusion, surface source at free convection in boundary layer with variable exchange 4=5238
noctilucent, Alaska 3=9095
noctilucent cloud particles, nature and origin 1=6627
noctilucent, height, structure, displacements 2=8969
noctilucent, low-lying, artificial origin 4=10717
noctilucent, particle sampling 4=4783
noctilucent particles, composition anal. 4=29285
noctilucent particles, electron microscope samples 4=29284
noctilucent particles, moisture, Ca film indicator 4=29286
noctilucent particles, ring pattern simulation 4=29287
noctilucent particles, sampling 4=29282
noctilucent particles, sampling, rocket techniques 4=29283
noctilucent, polarization of light 0=6484, 14290
noctilucent, rel. to meteor vapour condensation products 4=10714
noctilucent, wave formations origin 2=4598
noctilucent, western Canada obs. 1=20838
noctilucent, widespread, over Canada, June to July 1963 4=4784
nomenclature, relation to mechanisms 3=21039
nucleation on insoluble particles for low supersat. ratio 4=17885
particle collisions, effect on precipitation of inertial, hydrodynamic and electric forces 4=17886
planetary atmospheres, formation, criterion 4=17991

- ferromag. resonance and mag. anisotropy 0=8078
- ferromagnetic resonance, rel. to external field 1=20176
- ferromagnetism of dilute solid solutions in Pd 1=9022
- ferromagnetism, rel. to Heisenberg exchange interaction 2=10294
- film, coercive force 0=16139
- film, refl. spots and streaks from electron diffr. 4=23434
- films, absorption, light, oxidation and wavelength effects 3=17991
- films, domain structure, coercivity 2=16912
- films, domain structure and imperfections 3=8676
- films, effect on supercond. props. of Sn films 2=22122

Cobalt—contd
films, elec. cond. and Hall effect, structure transformations 1=14367
films, electrical conductivity and perp. Hall effect 3=17822
films, elec. cond. and thermoelec. power, rel. to crystallinity 1=14366
films, electrical and thermoelectric properties 3=15539
films, electron mirror micrographs, stray field meas. 3=13266
films, evap. technique onto glass 2=8885
films, external fields from domain walls 0=8047
films, ferromagnetic reson., standing modes, k^2 field spacing var. 4=13280
films formed in magnetic field, mag. anisotropy 1=2480
films, magnetic domains 3=18086
films, magnetization reversal, Kerr effect study 1=20100
films, magnetoelastic energy 4=22971
films, 1000 A, ferromagnetic domain obs. 3=20605
films, optical absorpt. 2=11488
films, optical consts. rel. to wavelength 3=10902
films, orientated overgrowth 3=18379
films, phase transformations 2=2425
films, slow magnetization reversal, domains study 2=21327
films, spin pinning at surface 3=15839
films, spin-wave resonance and sat. magnetization 2=18912
films, strip domain structure 3=20587
films, structr., by electron diffraction 3=1369
films, 10-100 A, magnetization, longitudinal and transverse 4=13175
films, time-depend. induced mag. anisotropy 2=23669
films, uniaxial anisotropy 2=6669
films, uniaxial anisotropy, temp. depend. 2=4227
films, uniaxial mag. anisotropy 1=3894
films, uniaxial mag. anistropy 1=3895
films, work function 2=9612
foils, prep. as isotope targets 2=17978
Hall effect anisotropy, crystal symmetry 3=841
Hall effect at low temp. 2=6421
Hall effect and magnetoresistance, anomalous, localized d- electron model 3=827
Hall effect, temp. dependence to 4. 2°K 0=6075
hexagonal, spin waves and neutron scatt. 2=8648
hydrogen over-potential in KCl solution 4=29228
hyperfine coupling 0=13756
hyperfine field direction, rel. to Fe, from Mössbauer effect 0=17489
interdiffusion with Ni and Cu, meas. analysis 4=12789
internal friction, cold-worked metal 2=21407
intrinsic magnetization under high press. 2=14771
ions, activated, diffusion in Cu 2=18597
ions, in $Ce_2Zn_3(NO_3)_{12}$: $24H_2O$, mag. interaction with Ce^{3+} ions 1=6260
ions, Co II, crystal-field spectra in various cpds. 3=25453
ions, Co^{2+}, e.s.r. in rutile 2=8668
ions, Co^{2+}, spin Hamiltonian, e.s.r. in CaF$_2$, ZnS, CdTe, ZnSe 1=3934
liquid, pure, solubility of H$_2$ 4=5157
liquid, viscosity 3=14115
magnetic anisotropy, electron diffraction study 1=12528
magnetic anisotropy, induced, rel. to temp. 3=1039
magnetic annealing 1=12533
mag. annealing anisotropy 1=20082-3
mag. annealing effect 4=4352
magnetic coercivity rel. to temp., saturation remanence, in Co—Cu alloy 4=13173
magnetic domain structure 3=15799
magnetic domain structure, surface 3=23164
mag. domains, made visible by magneto-optical Kerr effect 1=1224
magnetic domains, temp. var., electron microscope obs. 4=13168
magnetic field, local, at impurity Fe^{57} nuclei, using Mössbauer effect 0=11826
magnetic film hysteresis, rot., and torque 4=13169
magnetic form factor, hexagonal Co 4=30712
magnetic form factor meas., by neutron diffr., spin density temp. var. explanation 4=4353
magnetic, initial susceptibility, coercive force, temp. and deform. depend. 3=20576
magnetic internal field, Au^{197} Mössbauer data 3=6458
mag. order, high temp., thermal neutron scatt. 4=28794
magnetic props., films, effect of anisotropy 2=4226

Cobalt—contd
magnetic saturation, high pulsed fields 4=19154
magnetic sp. ht., effect of elastic modulus relaxation 4=25856
magnetic structure of monocrystals, rel. to their size 0=6233
magnetic susceptibility at γ/d and melting point 3=8654
magnetism, electronic model 1=20039
magnetization, a.c. and d.c., and under torsion 4=17647
magnetization axis, easy, process of change 1=20069
magnetization distribution, domain boundary layers 3=25530
magnetization, exchange parameters, 4.2-70° K 4=20545
magnetization, field depend. 1=14699
magnetization, press. var. 4=13170
magnetocrystalline, anisotropy of f. c. c. form, temp. depend. 2=12664
magnetocrystalline anisotropy meas. 2=8625
magneto-optical const., u.v., i.r. and visible regions 0=6171-3
magneto-optical effects rel. to optical consts. 3=10918
magneto-optical and optical props., i.r. 3=10919
magnetostriction meas. rel. to magnetization up to 17000 Oe 4=10268
martensitic shearing 0=21207
mirrors, for neutron polarization 4=16903
Mössbauer effect in embedded Au^{197} 1=11147
nearest neighbour force consts. rel. to elastic consts. 2=3818
neutron form factors; spin density distrib., Hartree—Fock calc. 3=1103
neutron reflection, total, by mag. Co 4=6066
neutron scatt., slow, effect of domain walls 2=21333
nuclear alignment at 0. 04°K 6=4285
n.m. relax. rate theory and internal mag. field 4=23062
n.m.r. 3=23259
n.m.r. and Bloch wall thermal movements 2=10716
nuclear mag. resonance of Co^{59} in solid soln. with Fe and Ni 1=7800
n.m.r. of Co^{59}, 25°-600°C meas. 3=18150
n.m.r. in cubic, hexagonal and mixed phase powders and films 1=6434
n.m.r. of dispersion in polystyrene 2=14850
n.m.r., due to nuclei in Bloch walls 3=3193
nuclear magnetic resonance in external mag. field 2=12831
n.m.r. in f.c.c. metal, T$_1$ value at 77° and 300°K 1=20258
n.m.r. rel. to ferromag. props. 3=1200
n.m.r., longitudinal, model and expt. 3=3197
nuclear magnetization precession modes, suggested 2=12829
nuclear orientation and h. f. s. coupling 0=20786
nuclear resonance of Co^{59} in f.c.c. metal, temp. and press. depend. 1=11464
nuclear Zeeman effect of Au^{197} rel. to mag. field 4=9811
oscillation strengths of neutral atom 0=20590
paramag. resonance of Co$^+$ in MgO 0=15513
paramagnetic susceptibility prediction 0=13763
particle size in Hg 2=15529
particles, in CoO shell, asymmetrical mag. curve 0=1785
particles in Hg, mag. effects of Sn adsorption 2=15614
particles, 25-2000 A, coercive force and remanence 0=10133
particles, very small, anisotropy 0=13809
phase transform., Co V, order-disorder, near 550° C 4=23259
plastic deformation, anisotropy meas. 3=11160
plastic deformation, slip line patterns 3=18187
polycrystal, magnetic domain pattern 0=8045
powder, deformed, elastic anisotropy and lattice strain 3=1231
powder, magnetic anisotropy 0=3002
powdered, n.m.r., nuclei in Bloch walls 2=18959
powders, Co^{59} n.m.r., additional lines 1=1280
precipitate in Cu-Co alloys, magnetization and particle size 0=3016
precipitation from Ge 2=19099
reflectivity, time var. 0=7998
specific heat meas., 50° to 1400°C 4=28369
sp. ht. below 1°K 0=9860
spectrochemical analysis 2=19177
spin rotation and polydomain structure 4=4354
spin rotation, poly-domain structure, neutron diffn. study 4=28802
spin wave spectrum, acoustic and optical branches 4=28801
stacking fault probabilities, effect of cold-working and annealing 4=22602

Cobalt — contd
- strain relaxation by irradiation 2=23768
- stress annealing, mag. orientation 2=4229
- stress relax. after plastic deformation 3=18172
- stress – strain relations, shear 4=7426

- Co(III) acetylacetonate, e.s.r. of Cr^{53} 4=13338
- Co alloys, hyperfine coupling 0=2991, 13756
- Co alloys, impure, d-band structure 3=10622
- alloys, magnetism, electronic model 1=20039
- Co alloys, n.m.r. shifts, line-widths and intensities 1=10194
- Co amalgam, mag. props., correl. with grain dimensions 0=13764
- cobalt ammonium sulphate, relaxation parameters 0=6261
- Co-base alloys, stacking faults in cold working 4=15479
- Co-base alloys, stacking faults and segregation 4=25950
- Co binary solid solutions, with Al, Ga, Si, Ge, Sn 3=16121
- boride and carbide, anomalous thermionic emission, theory 0=2377
- complex hydrolyzed salts, mag. props. 4=20512
- Co complex oxides, $\bar{X}$-ray K absorption, rel. to valence states 4=6691
- complexes, Co^{3+}, ${}^1T_{1g}$ state, rotational strength 3=8271
- Co complexes, distortion of octahedral charge distrib. 1=1287
- Co^{2+} complexes, ionic radii, spin—orbit coupling and geometrical stability 1=3554
- Co III complexes, rot. dispersion, circular dichroism 4=22398
- Co(III) complexes, spin-forbidden absorpt. band 3=22557
- CoIII cyanides, crystal structure 0=4581
- dihalides, linear symmetrical, amplitudes of vibr. and Bastiansen—Morino shrinkage effect 4=30441
- Co ferrite crystals growth, ferrous free 3=11230
- Co ferrite, internal mag. field at Co nuclei 3=1154
- Co ferrite mag. anisotropy, mag. annealing effect 2=10668
- Co ferrite, mag. field at nucleus, from low-temp. spec. heat 6=6283
- Co ferrite, single crystal growth 1=7846
- ferrite, temp. dependence of magnetization 1=11449
- ferrites, mixed, permittivity, a.c. fields rel. to temp. 1=10081
- ferrites, mixed, permittivity in a.c. fields rel. to temp. 1=11329
- Co ferromag. alloy, Co^{59} n.m.r. 1=20257
- Co halide complexes, tetrahedral, spectra 3=15354
- Co halides in organic solvents, absorption spectra 4=29634
- Co halides, vaporization, dimer formation 0=3566
- Co (III) hexammime salts, absorption spectra 2=8514
- Co^{2+} hydrated salts, paramag. behaviour 3=6691
- Co-iron ferrite, orbital degeneracy of Co^{2+}, effects 0=3066
- Co—lanthanide elements, magnetothermal effects 2=10640
- Co orthosilicates, mag. props. 77°-300°K 3=23142
- Co^{2+} in oxide lattices, mag. props. 1=20056
- Co pentamminebromo complexes, Br^{80m} decay effects 3=23553
- Co(II) pyridine complexes, i.r. spectrum of thyocyanate group 3=22581
- Co— rare-earth cpds. with Cu_5Ca structure, magnetic moments 1=6382
- Co^{2+} salts, hydrated, crystalline electric fields 0=18162
- Co^{2+} salts, i. r. absorption from L-S splittings 0=1732
- Co salts, spin—lattice relaxations of paramag. dispersion 3=23241
- Co solid solns, with Fe, Ni, Cu, Mn, Cr, rel. to ferromag. props. 3=1200

Cobalt compounds—contd

- Co spinel, Curie—Weiss consts. from molecular field treatment 4=13231
- Co-substituted ferrites, ferromag. res. linewidth 1=6398
- Co-substituted ferrites, ferromag. resonance line-widths, calc. 1=7782
- Co-substituted Mn ferrite, ferrimag. resonance 1=6403
- Co-substituted W-type hexagonal oxides, anneal-induced anisotropy 0=10120
- ternary carbides with Sn, Zn 6=16324
- Co titanate, mag. props. >55°K 2=6676
- Co-Tutton salt, antiferromagnetism 3=1058
- Co—Tutton salts, at 0.07°K, magnetic cooling by anisotropic hyperfine structure coupling 4=16306
- Co vanadate (IV), magnetization reversal and asymmetry 0=6246
- Co-Al, magnetization 0=677
- Co—Al alloys, oxidation, around Curie point 3=11337
- CoAl, electron distrib., X-ray meas. 3=16092
- CoAl, ordering rel. to composition 3=16104
- Co_2Al_9, hot-hardness 2=2337
- $Co(AlCl_4)_2$, crystal structure 3=1330
- $CoAl_2O_4$, ferrimag. prop., neutron diffn. and susceptibility meas. 4=28836
- $CoAl_2O_4$, ion and electron conductivities 3=15589
- $Co_2Al_2O_4$, magnetic moments of Co^{2+} 4=13231
- $CoAs_2$, electrical conductivity and magnetism 0=7394
- CoAsS, cond. elec., temp. var., paramagnetism 3=6601
- CoAsSe, electrical conductivity and magnetism 0=7934
- Co–Au paramagnetic resistive anomalies 1=20213
- Co–Au, precipitation and mag. props. 1=20603
- Co–Au solid solutions 4=7468
- Co–Au thermocouple, low temp. transport props. 0=7858
- CoB, ferromag. props. 1=20063
- CoB, paramag. props. (150-800°K) 3=1124
- $Co_2Ba_2Fe_{12}O_{22}$, $Co_2Ba_3Fe_{24}O_{41}$, trigonal magnetocrystalline anisotropy 0=13840
- $Co_2Ba_2Fe_{12}O_{22}$, microwave ferromag. resonance 0=3110
- Co_3Bi_2, mag. domain structure, temp. depend. 4=10267
- CoBr, spectra, λ 4300 - λ 4700A 3=12818
- $CoBr_2$, crystal-field spectra of d^3, d^7 ions 3=25453
- $CoBr_2$, internal electric-field gradient, calc. 1=11143
- $CoBr_2$ mag. susceptibility 0=13845
- $CoBr_2.6H_2O$, antiferromagnetic space group, from p.m.r. 4=13262
- $CoBr_2.6H_2O$, antiferromagnetism below 3°K, from proton resonance and heat capacity study 0=3099
- $CoBr_2.6H_2O$, low temp. optical absorption 0=16051
- $CoBr_2.6H_2O$, mag. susceptibility, liq. He temp. 1=12511
- Co—C, C diffusion rel. to temp. 4=20295
- Co_3C, cryst. structr., by electron diffraction 3=1324
- $[Co(C_2H_5)_2]^+$, field gradient at Co site 4=6627
- $[Co(C_5H_5)_2]^+$, field gradient at Co, Sternheimer correction 4=25708
- $[Co(C_2H_5)_2]^+$, r^{-3} mean value for 3d and 4p electrons 4=6626
- $Co(CH_3COO)_2.4H_2O$, crystalline electric field 0=1783
- $Co_{80-x}C_{20}Mn_x$, mag. props., structure 0=3010

Cold working—contd
Cu, X-ray back reflect. study 1=4086
Cu–Al, short-range order, X-ray diffuse scattering 1=15139
Cu alloys, with Al, Si, Zn, elec. cond. 0=15888
Cu$_3$Au, heat treatment,ordering and strength changes 4=7485
Cu–Co alloys, dilute, rel. to ferromag. anisotropy 2=16903
Cu–Co, coercivity changes due to heat treatment and cold rolling 1=2472
Cu–Fe, ferromag. anisotropy induced 2=21306
Cu–Sb dilute alloy, effect on elec. resistivity 0=9934
Cu–Si alloy, dislocation density rel. to Si content 2=3916
Cu–Si–Mn, effect on X-ray diffraction pattern 4=10577
Cu–Zn, rel. to modulus of rigidity change 1=11517
Fe, internal friction 1=3963
Fe, polycrystalline, rel. to coercive force recovery 4=13152
Fe, recovery meas. 20°-450°C and defect nature 4=6900
Fe, cast, steel, effect on particle size and lattice distortions 3=18401
Fe cellular structure within crystals, by electron microscopy 3=13521
Fe, cold-rolled, primary recryst. texture 3=18353
Fe, rel. to ductility 3=13349
Fe wires, ageing, dislocation atmospheres 3=13333
Fe alloys, precipitation and deform. damping peak 4=28962
Fe–C system, internal friction peak 2=21409
Fe–Ge alloys, α-solid soln. range 2=10651
Fe–N system, internal friction peak 2=21409
Fe–Ni–Cr–Co, creep 0=6312
Fe–Ni(23.7%)–Mn(2.8%), martensitic transform. 2=23873
Fe–Pd alloys with low exp. coeffs. 3=2734
Fe–Si(3%), crystal texture similarity to Fe 4=7673
Fe-3% Si, effect on crystal orientation and mag. props. 3=6704
GaAs, rel. to surface damage 1=20657
GaSb, rel. to surface damage 1=20657
GaSe, effect on elec. cond. and Hall effect 3=2913
GaTe, effect on elec. cond. and Hall effect 3=2913
Ge, rel. to electron photoemission 1=16379
In alloys, superconducting transition 3=7403
InAs, rel. to surface damage 1=20657
InSb, rel. to surface damage 1=20657
KBr, and X-ray line broadening 3=8934
LiF, effect on internal friction 2=8709
LiF, rel. to lattice parameter changes 3=8838
Mg and crystal lattice strain 4=25951
Mg, vacancies, formation and activation energies and mobility 3=25269
MnAlGe, effect of milling on mag.props. 4=7218
Mo, and annealing, density changes 4=23177
Mo, cold-rolled and recryst. textures 4=2110
Mo, dislocation relaxation spectrum 1=7821
Mo, recovery, stored energy meas. 4=15506
Mo-Permalloy tape, effects 0=3275
Mo-Permalloy tapes, sq. hyst. loop progress 0=3276
NaCl, surface treatment, deform. processes 3=8785
NaCl, and X-ray line broadening 3=8934
NaF, and X-ray line broadening 3=8934
Nb, dislocation relaxation spectrum 1=7821
Nb, imperfections, hardness and X-ray diffraction data 0=13529
Nb–Zr alloys, rel. to superconductivity 1=11878
Nd in Mg, supersat. solid soln., causing lattice distortions 4=10435
Ni, and annealing, rel. to elastic limit, hardness, and elec. resistivity 4=13431
Ni, atomic defects meas. 2=12421
Ni, effect on compressive yield stress 1=10216
Ni, elec. cond. recovery 0=15883
Ni filings, X-ray line broadening effect 2=17014
Ni, hardness and conductivity, electrical,changes 3=13373
Ni, at liquid N$_2$ temp., stored energy 1=14906
Ni, magnetic susceptibility recovery 1=11442
Ni, recovery 2=10765
Ni, recovery from cold working 2=23774
Ni sheet, ferromag. resonance 2=12811
Ni, stage III recovery, internal friction peaks 4=26523
Ni, stored energy release on annealing 3=11173
Ni, welding, structural changes 2=8734
Ni–0.1% Au, effect on creep and fracture 2=16962
Ni–Co, mag. anisotropy induced 2=23651

Cold working—contd
Ni$_3$Cr, anomalous elec. resist. 1=7612
Ni–Fe alloy, effect on mag. anisotropy, meas. 4=10282
Ni–Fe alloys, effect on mag. props. 0=8037
Pb, superconductivity, effect of crit. fields 3=5588
PbTe, X-ray diffr. study 3=18203
Pt, point defects by deformation in liq. N 0=20798
Pt, stage III recovery, internal friction peaks 4=26523
Pt wire, elec. resist., annealing recovery 4=15524
Re, effect on superconducting domains 0=2293
Rh wire, effect on elec. resist. 4=15523
Si, crushing, tel. to i.r. absorption 2=18843
Si–Fe crystals, rolled and annealed, microstructure study by electron transmission microscopy 4=23171
Ta, dislocation relaxation spectrum 1=7821
Th, rolling texture rel. to stacking-fault energy 4=13656
Th–Ce alloys, rolling texture rel. to stacking-fault energy 4=13656
Ti, internal friction recovery on annealing 4=7461
Ti–Mo alloy, martensitic phases 3=23477
Ti–Mo, supercond., effect of cold-rolling 3=9686
U, cold-rolled, annealed, ductility 3=6795
U, irradn. growth 3=8480
U, rel. to recrystallization 4=2116
W, dislocation relaxation spectrum 1=7821
W, elec. resistivity recovery 4=17480
Zr–Pu alloys, growth on irradiation 2=3975

H + H, spin change calc., temp. var. 4=6511
H + H_2, collinear collisions, exchange, classical mechanical calc. 4=6660
H and H_2 excitation by impact 0=11501
H and He beams, atomic and ionic partial stopping powers in gaseous H_2 4=25779
H, hot atom reactions, with propane, butane, butene -1, kinetic theory analysis 4=30395
H, interaction with He, methane and H_2 4=25583
H, non-additivity of atomic interaction energies 4=25584
H—p, charge exchange and high reson. excitation 4=19976
H^+—H atom, electron capture theory 4=12405
H^+—H, electron capture wave calc. 4=22326
$H^+ + H(1s) \rightarrow H(1s) + H^+$ 4=24575
$H^+ + H(1s) \rightarrow H(1s) + H^+$, cross-section calc. 3=1938
$H^+ + H(1s) \rightarrow H(n^{7}_{-}m) + H^+$, calc., no need for p—p interaction 4=27475
$H^+ + He(1s^2) \rightarrow H(1s) + He^+$ 4=27474
H_2 gas, partial atomic and ionic stopping powers for He and H_2 beams 4=25778
H_2—HD, rotational transitions, rigid-body approx. 3=6436
$H_2{}^{+*} + H_2 \rightarrow H_3{}^+ + H$, cross-sect. rel. to vibration of $H_2{}^+$ ion 4=24574
H_2, para, rotational energy transfer 3=6435
H_2, rotational excit. by He and H_2 3=17623
HO_2^* deactivation by H_2O_2, CO_2 0=21272
H_2O with H_2O or O_2, line width calc. 4=22439
He atoms, new process of excitation transfer 1=9915
He atoms, two, normal, Born approx. calc. 3=710
He, excitation transfer from singlet to triplet states 1=19597
He gas, atomic excitation to 4^1D state 3=2580
He—He scatt., nonadiabatic effects at high energies 4=1228
He interatomic potentials, comparison 4=12406
He ion—atom, resonance excitation at 28eV 4=19945
He ionization cross-sects, on He, Ne, N_2 4=24572
He, Morse potential force consts. from viscosity 4=9787
He on Ni, W, and Pt, thermal accommodation coeffs., theory and expt. 4=15814
He plasma, afterglow, electron—atom momentum transfer, 10^{-3} eV, 4.2°K 4=14638
He scattered on He, scattering cross-sections, calc. 4=12402
He^3—C^{12} scatt. at 28·5 MeV 3=8129
He^3—He^3 scattering, elastic, 3 - 12 MeV 3=12521
He^3 metastability exchange cross-section, temp.-dependence 4=25589
He^3—S^{32} elastic scatt. at 28·5 MeV 3=8129
He^+—He, charge transfer, differential and total cross-sects 4=24573
$He^{2+} + He^+(1s) \rightarrow He^+(1s) + He^{2+}$, calc. 3=1938
Hg atom—BC mol., electronic—vibr. energy transfer 3=6433
Hg atoms, excited, 6^3P_1, and rare gases, N_2, O_2, H_2 double reson. meas. 4=15304
Hg atoms with foreign gases, quenching and depolarizing probab. 0=17691
Hg atoms, metastable, disorientation 3=15301
Hg, interatomic potential energy functions, from viscosity 4=25592
I^{127+} ions on Au, Ni, Al, C, stopping cross-sections 4=3815
I_2 in pyridine, and spectrum 4=28193
K atomic beam scatt. by Ne, Ar, Xe at different temperatures 4=25597
Mg, elastic and inelastic scattering of α-particles 0=17608
γ + N and π + N, near threshold 2=7888
γ + N and π + N, near threshold 3=6032
$N^{14} + N^{14} \rightarrow N^{13} + N^{15}$, scatt. approx. for long range forces 3=2222
N^+—N collisions, charge-exchange and diffusion cross-sections, and interaction energies 4=22438
N^{n+}—H_o (n=0-3), charge exchange meas. 4=8628
N_2—Ar discharges, second kind 0=1523
N_2—e^- elastic scattering, resonances 4=25566
N_2 ionization by N_o, 20-1000 eV meas. 3=4015

Collision processes—contd
N_2 metastable molecule collisions in weak discharge afterglows 4=24613
N_2 second positive system bands, excitation 0=1521
Na atom—BC mol., electronic—vibr. energy transfer 3=6433
Na atoms, spin-exchange collisions, effect on optical orientation 2=1964
Na vapour, optically oriented, spin exchange 4=1230
Ne excitation induced by H^+ and He^+ impact, 5-35 keV 4=25540
Ne on Fe and W, thermal accommodation coeffs., theory and expt. 4=15814
Ne^+—Ne, electron capture and stripping 3=4725
Ne^+—Ne, resonant electron capture 4=24588
O atom charge transfer with O^+, H^+ 4=24593
O^*, collisional deactivation 4=10634
O^+—O collisions, charge-exchange and diffusion cross-sections, and interaction energies 4=22438
O_2 ionization by O_2, 20-1000 eV meas. 3=4015
Rb atoms, optically pumped, spin relaxation in buffer gases 4=15308
Rb—Cs atoms, exchange, effect on Rb longitudinal electronic polarization relax. 4=22321
Rb^{85}—Rb^{87}, atomic spin-exchange cross-section meas. 4=9676
Rb vapour, disorientation collisions with buffer gases 0=482
Rb vapour, excitation transfer, from hyperfine relaxation 4=6510
T atoms, moderation, relative efficiency of D_2 or CH_4 4=7778
Tl—Hg, optical meas. 4=28156
TlF—atom, rotational transition (2, 0) → (3, 0) excitation 4=25769
TlF, scatt. by rare gases in definite quantum state 4=6664
Zn, interatomic potential energy functions, from viscosity 4=25592

LiF, review 4=1458
LiF, trapped-hole centres due to electron pulses 3=8460
LiF, V-centre, h.f.s., e.s.r. study 0=4298
LiF, V_k centre, energy and wave functions 4=17453
LiF, X-irrad. 0=2836
LiF, X-irrad., absorpt. spectrum at 20°K 4=28695
LiF, X-irrad. effects, low-temp. annealing 4=15505
LiF, X-irrad., electronic structure of "antimorph" of F-centre, by e.s.r. 6=6053
LiF, X-ray irrad., F-centre antimorph, e.s.r. 1=20217
LiF, X-irrad., i.r. absorption, phonon-free transitions 4=17573
LiH, absorption 1=17578
LiH colloid centres, e.s.r. 0=1598
LiH, F-centres in, e.s.r. study 1=19811
MgO, F-centres, Γ_1^+ and Γ_4^+ state wave functions 3=25301
MgO, F-centres, spin–lattice relaxation 3=817
MgO, rel. to irradiation 3=22717
MgO, by X-rays, role of impurities 2=12464
NH_4Cl, electron-deficiency centres, e.s.r. meas. 4=10006
Na azide, centres identified as colloidal Na 0=16063
Na azide, nature and mechanism of formation 0=8008
Na cyanamide, by electron or u.v. irrad. 4=17448
Na^+ ion, association to form A and B-centres 2=607
Na silicate glass, induced absorption bands, rel. to radiation and impurities 2=16667

Colour centres—contd
- NaBr, F, struct. magneto, optical study at 1.86°K 4=17449
- NaBr, rel. to elec. cond. 0=15880
